2 Omdat de grafiek van f dalend is, is het minimum van f op elk interval de functiewaarde in de rechtergrens van het interval. En zo is het maximum van f op elk interval de functiewaarde in de linkergrens van het interval.

De middens van de intervallen zijn 0,5; 1,5; 2,5; 3,5; 4,5 en 5,5.
 $O(V) \approx (f(0,5) + f(1,5) + f(2,5) + f(3,5) + f(4,5) + f(5,5)) \cdot 1 \approx 6,28.$

6a De oppervlakte van de blauwe rechthoek rechts wordt gehalveerd.
 6b De oppervlakte van de blauwe rechthoek rechts is het verschil van de ondersom en de bovansom. De breedte van deze rechthoek is Δx . Als $\Delta x \rightarrow 0$ dan nadert de oppervlakte van deze blauwe rechthoek naar 0 en nadert het verschil van de ondersom en de bovansom dus ook naar 0.
