

FEATURES

- 2 DAC channels: 16-, 20-, or 24-bit
- 2 ADC channels: 16- or 20-bit
- HD audio sample rates
 - 8 kHz, 11.025 kHz, 16 kHz, 22.05 kHz, 32 kHz, 44.1 kHz, 48 kHz
- Greater than 90 dB dynamic range
- S/PDIF output: 32 kHz, 44.1 kHz or 48 kHz, 16- or 24-bit
- Digital beep and analog PC beep pass-through
- Integrated headphone amplifiers on two ports
- Port retasking
- Selectable microphone and line inputs
- Full analog mixer
- Legacy inputs: CD and auxiliary inputs
- External amplifier power-down (EAPD)
- 48-pin, Pb-free LQFP

ENHANCED FEATURES

- No AFILT pins, results in BOM savings
- 5.0 V AV_{DD} supply, 3.3 V DV_{DD} supply
- Jack-sensing autoconfiguration options
 - Mute line output and monaural output (MONO_OUT) when headphones are used
 - Mute MONO_OUT when a device is in the line out jack
- Selectable trip level: high/low supports all jack types
- Peripheral identification/enumeration
- Jack event/presence detection using SENSE or GPIO pins
- Microphone to MONO_OUT for speakerphone applications
- Advanced power management modes
- 4 software-controlled microphone bias pins
- Up to 30 dB microphone boost
- 4 GPIOs—external control or traditional jack sense

Industrial	-40°C	+85°C	°C
Storage Temperature	-65°C	+150°C	°C

Stresses greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.

ENVIRONMENTAL CONDITIONS

Ambient Temperature Rating

$$T_{\text{AMB}} = T_{\text{CASE}} - (PD \times \theta_{\text{CA}})$$

where:

T_{CASE} is the case temperature in °C

PD is the power dissipation in W

θ_{CA} is the thermal resistance (case-to-ambient)

Table 14. Thermal Resistance

Package	θ _{JA} ¹	θ _{JC} ²	θ _{CA}
LQFP	76.2°C/W	17°C/W	59.2°C/W

¹ θ_{JA} is the thermal resistance (junction-to-ambient).

² θ_{JC} is the thermal resistance (junction-to-case).

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 3. Pin Configuration

Table 15. Pin Function Descriptions

Mnemonic	Pin No.	I/O	Description
SDATA_OUT	5	I	HD Audio Link Serial Data Output. Codec input stream.
BIT_CLK	6	I	HD Audio Link Bit Clock Input. 24 MHz.
SDATA_IN	8	I/O	HD Audio Link Serial Data Input. Codec output stream.
SYNC	10	I	HD Audio Link Frame Sync.
RESET#	11	I	HD Audio Link Reset. Master hardware reset.

Table 16. Digital Input/Output Pin Function Descriptions

Mnemonic	Pin No.	I/O	Description
GPIO_2	2	I/O	General-Purpose Input/Output. Digital signal used to sense/control external circuits.
GPIO_3	3	I/O	General-Purpose Input/Output. Digital signal used to sense/control external circuits.
GPIO_0/JS_1	43	I/O	GPIO_0—General-Purpose Input/Output. Digital signal used to sense/control external circuits. JS_1—Classic (DC) Jack Sense for Headphone Out Pins. Low indicates that nothing is plugged into the jack; high indicates that a peripheral is plugged into the jack.
GPIO_1/JS_0	44	I/O	GPIO_1—General-Purpose Input/Output. Digital signal used to sense/control external circuits. JS_0—Classic (DC) Jack Sense for Line Out Pins. Low indicates that nothing is plugged into the jack; high indicates that a peripheral is plugged into the jack.
SENSE_A/SRC_B	13	I/O	SENSE_A—Jack Sense A–D Input. For use with isolated switches on audio jacks. ¹
SENSE_B/SRC_A	34	I/O	SENSE_B—Jack Sense E–F Input. For use with isolated switches on audio jacks. ¹
EAPD	47	O	External Amplifier Power-Down Output.
S/PDIF_OUT	48	O	S/PDIF Output.

¹ To reduce SENSE_A/B static current draw, connect a single 2.69 kΩ resistor between Pins 13 and 34. Remove the resistors from Pins 33 and 13 to AVDD.

Table 17. Analog Input/Output Pin Function Descriptions

PORT-F_L	16	I/O	Left	Multifunction Analog I/O Jack (Typically Rear Microphone).	MIC, LI, LO
PORT-F_R	17	I/O	Right	Multifunction Analog I/O Jack (Typically Rear Microphone).	MIC, LI, LO
CD_L	18	I	Left	CD Input, Left Channel.	LI
CD_GND	19	I	Ground	CD Input, Ground.	LI
CD_R	20	I	Right	CD Input, Right Channel.	LI
PORT-B_L	21	I	Left	Multifunction Analog I/O Jack (Typically Front Microphone).	MIC, LI
PORT-B_R	22	I	Right	Multifunction Analog I/O Jack (Typically Front Microphone).	MIC, LI
PORT-C_L	23	I/O	Left	Multifunction Analog I/O Jack (Typically Rear Line Input).	MIC, LI, LO
PORT-C_R	24	I/O	Right	Multifunction Analog I/O Jack (Typically Rear Line Input).	MIC, LI, LO
PORT-D_L	35	I/O	Left	Multifunction Analog I/O Jack (Typically Rear Line Output).	MIC, LI, LO
PORT-D_R	36	I/O	Right	Multifunction Analog I/O Jack (Typically Rear Line Output).	MIC, LI, LO
MONO_OUT	37	O	-	Monaural Output to Telephony Subsystem Speakerphone.	LO
PORT-A_L	39	O	Left	Headphone Output, Left Channel.	LO, HP
PORT-A_R	41	O	Right	Headphone Output, Right Channel.	LO, HP

¹ MIC—Microphone capable, includes programmable MIC_BIAS pins and integrated boost amplifier; LI—line level analog inputs; LO—line level analog outputs; HP—headphone support, includes integrated headphone amplifier.

Table 18. Filter/Reference Pin Function Descriptions

Mnemonic	Pin No.	I/O	Description
VREF_FILT	27	O	Voltage Reference Filter.
MIC_BIAS-B	28	O	Programmable Microphone Bias Output. Intended for connection to Port B.
MIC_BIAS-C	29	O	Programmable Microphone Bias Output. Intended for connection to Port C.
MIC_BIAS-F	30	O	Programmable Microphone Bias Output. Intended for connection to Port F.
MIC_BIAS-D	32	O	Programmable Microphone Bias Output. Intended for connection to Port D.

Table 19. Power and Ground Pin Function Descriptions

Mnemonic	Pin No.	I/O	Description
DV _{SS}	4, 7	I	Digital Supply Return (Ground).
DV _{DD}	1, 9	I	Digital Supply Voltage (3.3 V).
AV _{SS}	26, 42	I	Analog Supply Return (Ground).
AV _{DD}	25, 38	I	Analog Supply Voltage (5.0 V).
			AV _{DD} supplies should be well filtered because supply noise degrades audio performance.

HD AUDIO CODEC INFORMATION

Table 20. Widget List and Descriptions

NID	Name	Type ID	Type	Description
00	ROOT	x	Root	Device identification.
01	FUNCTION	x	Function	Designates this device as an audio codec.
02	S/PDIF	0	Audio output	Designates the codec S/PDIF digital stream output interface.
03	Front DAC	0	Audio output	Designates the playback channel digital/audio converters.
04	Record ADC	1	Audio input	Designates the record channel audio/digital converters.
05	Port-D (Line Out)	4	Pin complex	Port-D pin drivers. Typically used as rear panel line output.
06	Port-A (Headphone Out)	4	Pin complex	Port-A pin drivers. Typically used as front panel headphone output.
07	MONO_OUT	4	Pin complex	Monaural output pin driver. Typically used to drive an internal speaker or as a microphone selector on a telephony system.
08	Port-B (Front Microphone)	4	Pin complex	Port-B pin drivers. Typically used as front panel microphone.
09	Port-C (Line In)	4	Pin complex	Port-C pin drivers. Typically used as rear panel line input.
0A	S/PDIF_OUT	4	Pin complex	S/PDIF output digital interface.
0B	Monaural Selector	3	Audio selector	Chooses which signals drive the monaural output mixer and pin.
0C	Microphone Mixer	2	Audio mixer	Allows selective mixing of the front/rear microphone sources to a single combined signal.
0D	PC Beep Selector	3	Audio selector	Selects between the digital beep generator and the analog PC BEEP pin as the source for the analog mixer.
0E	Analog Mixer	2	Audio mixer	Selectively mixes analog input signals into a single signal.
0F	Monaural Mixer	2	Audio mixer	Stereo-to-monaural mixer for MONO_OUT.
10	Digital PC Beep	7	Beep generator	Digital PC beep generator.
11	Front Mix Amp	3	Audio selector	Individual gain control for the DAC (front) input to the Analog Mixer.
12	Port-B Mix Amp	3	Audio selector	Individual gain control for the Port-B (front microphone) input to the analog mixer.
13	Port-C Mix Amp	3	Audio selector	Individual gain control for the Port-C (line in) input to the analog mixer.
14	Analog Power-Down	5	Power widget	Power control on the analog mixer and associated amplifiers.
15	Record Selector	3	Audio selector	Chooses which signal is recorded by the record ADC. Also contains the record gain controls.
16	PC Beep In	4	Pin complex	Analog PC Beep in pin drivers. This signal is coupled to the outputs while the codec is held in reset. This may be selected as an input to the analog mixer after reset has been released.
17	Port-E (Aux In)	4	Pin complex	Port-E pin drivers. Typically used as auxiliary input.
18	Port-F (Rear Microphone)	4	Pin complex	Port-F pin drivers. Typically used as rear panel microphone.
19	CD In	4	Pin complex	CD in pin drivers.
1A	Port-D Mix Amp	3	Audio selector	Individual gain control for the Port D (front) input to the analog mixer.
1B	Port-E Mix Amp	3	Audio selector	Individual gain control for the Port E (aux) input to the analog mixer.
1C	Port-F Mix Amp	3	Audio selector	Individual gain control for the Port F (rear microphone) input to the analog mixer.
1D	CD Mix Amp	3	Audio selector	Individual gain control for the CD input to the analog mixer.
1E	Front Microphone Mute	3	Audio selector	Mute control for Port B (front microphone) into microphone mixer.
1F	Rear Microphone Mute	3	Audio selector	Mute control for Port F (rear microphone) into the microphone mixer.

JACK PRESENCE DETECTION

HD AUDIO STYLE JACK PRESENCE DETECTION

The AD1981HD uses two jack sense lines for jack presence detection. Combined with the peripheral enumeration engines, this enables software to determine if there is a device plugged into the circuit and what type of device it is. Software can also reconfigure jacks and amplifiers as necessary, ensuring proper audio operation and providing jack retasking.

Jack presence is detected using a resistor tree arrangement outlined in the HD audio specification. Up to four jacks can be sensed on a single sense line by using different value resistors for each jack between the sense line and ground (AV_{SS}). Jacks must normally have open, isolated switches to use this method of jack presence detection.

Jack presence is reflected in the HD audio pin widget pin sense verb. The MSB (Bit 31) indicates the current plugged state of the connected jack. Jack change interrupts can be enabled using the unsolicited response verb on each of these nodes. Each jack can be set to generate a different value to provide event identification within the software interrupt.

There are two methods to connect the codec to the jack presence detection pins. In the first method, use a single 2.69 k Ω 1% resistor between the SENSE_A and SENSE_B lines, but no capacitor. In the second method use a single 2.69 k Ω resistor between SENSE_A and AV_{DD} and between SENSE_B and AV_{DD} . In the second method, the designer can add up to 1 μ F of capacitance on each sense line. Designers should offer both methods for maximum flexibility.

The specific resistor value for each jack is shown in Table 27. Use 1% resistors for all jack presence detect circuitry to ensure accurate detection.

CLASSIC JACK PRESENCE DETECTION

The AD1981HD GPIO pins can be used as classic jack sense pins in JS_0- and JS_1-style operation (similar to AD1981B operation). Only two jacks, typically line out and headphone out, are supported in this configuration. The GPIO pins can be connected to the left channel wrap-back switch on the jack via a 2.2 k Ω (typical) resistor. The left channel needs a 20 k Ω (typical) resistor-to-analog ground to complete the circuit. This configuration allows autoconfiguration when other devices are plugged in; for example, when headphones are plugged in, the external speakers are disabled for private listening.
