

FEATURES

- 10-phase or 12-phase vertical transfer clocking**
- Supports 4-field and 5-field CCD readout**
- Correlated double sampler (CDS)**
- 6 dB to 42 dB 10-bit variable gain amplifier (VGA)**
- 12-bit 36 MHz A/D converter**
- Black level clamp with variable level control**
- Complete on-chip timing generator**
- Precision Timing core with < 600 ps resolution**
- On-chip 3 V horizontal and RG drivers**
- 2-phase and 4-phase H-clock modes**
- Electronic and mechanical shutter support**
- On-chip driver for external crystal**
- On-chip sync generator with external sync input**
- 64-lead LFCSP package (9 mm × 9 mm, 0.5 mm pitch)**

APPLICATION

Digital still cameras

GENERAL DESCRIPTION

The AD9994 is a highly integrated CCD signal processor for digital still camera applications. It includes a complete analog front end with A/D conversion, combined with a full-function programmable timing generator. The timing generator is capable of up to 12-phase vertical clocking to support advanced CCDs with 4-field and 5-field readout. A Precision Timing core allows adjustment of high speed clocks with approximately 600 ps resolution at 36 MHz operation.

The AD9994 is specified at pixel rates of up to 36 MHz. The analog front end includes black level clamping, CDS, VGA, and a 12-bit A/D converter. The timing generator provides all the necessary CCD clocks: RG, H-clocks, V-clocks, sensor gate pulses, substrate clock, and substrate bias control. Operation is programmed using a 3-wire serial interface.

Packaged in a 64-lead LFCSP, the AD9994 is specified over an operating temperature range of -25°C to $+85^{\circ}\text{C}$.

For more information about the AD9994, email Analog Devices at afe.ccd@analog.com.
