

### FEATURES

**Latch-up proof**  
**3 pF off source capacitance**  
**5 pF off drain capacitance**  
**0.07 pC charge injection**  
**Low leakage: 0.2 nA maximum at 85°C**  
**±9 V to ±22 V dual-supply operation**  
**9 V to 40 V single-supply operation**  
**48 V supply maximum ratings**  
**Fully specified at ±15 V, ±20 V, +12 V, and +36 V**  
 **$V_{SS}$  to  $V_{DD}$  analog signal range**

### APPLICATIONS

**Automatic test equipment**  
**Data acquisition**  
**Instrumentation**  
**Avionics**  
**Audio and video switching**  
**Communication systems**

### GENERAL DESCRIPTION

The ADG5212/ADG5213 contain four independent single-pole/single-throw (SPST) switches. The ADG5212 switches turn on with Logic 1. The ADG5213 has two switches with digital control logic similar to that of the ADG5212; however, the logic is inverted on the other two switches. Each switch conducts equally well in both directions when on, and each switch has an input signal range that extends to the supplies. In the off condition, signal levels up to the supplies are blocked.

The ADG5212 and ADG5213 do not have a  $V_L$  pin. The digital inputs are compatible with 3 V logic inputs over the full operating supply range.

The ultralow capacitance and charge injection of these switches make them ideal solutions for data acquisition and sample-and-hold applications, where low glitch and fast settling are required. Fast switching speed together with high signal bandwidth make the parts suitable for video signal switching.

### FUNCTIONAL BLOCK DIAGRAMS

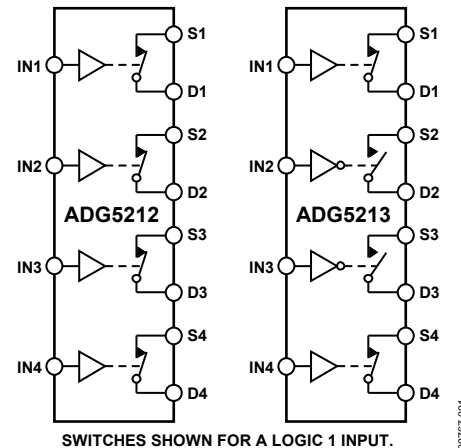

Figure 1.

### PRODUCT HIGHLIGHTS

1. Trench Isolation Guards Against Latch-Up.  
A dielectric trench separates the P and N channel transistors, thereby preventing latch-up even under severe overvoltage conditions.
2. Ultralow Capacitance and <1 pC Charge Injection.
3. Dual-Supply Operation.  
For applications where the analog signal is bipolar, the ADG5212/ADG5213 can be operated from dual supplies of up to ±22 V.
4. Single-Supply Operation.  
For applications where the analog signal is unipolar, the ADG5212/ADG5213 can be operated from a single rail power supply of up to 40 V.
5. 3 V Logic-Compatible Digital Inputs.  
 $V_{INH} = 2.0$  V,  $V_{INL} = 0.8$  V.
6. No  $V_L$  Logic Power Supply Required.

LFCSP ( $\theta_{JA} = 30.4^\circ\text{C/W}$ )	32	17	8	mA maximum
$V_{DD} = 36 \text{ V}$ , $V_{SS} = 0 \text{ V}$				
TSSOP ( $\theta_{JA} = 112.6^\circ\text{C/W}$ )	34	18	8	mA maximum
LFCSP ( $\theta_{JA} = 30.4^\circ\text{C/W}$ )	59	24	9	mA maximum

## ABSOLUTE MAXIMUM RATINGS

T<sub>A</sub> = 25°C, unless otherwise noted.

Table 6.

Parameter	Rating
V <sub>DD</sub> to V <sub>SS</sub>	48 V
V <sub>DD</sub> to GND	−0.3 V to +48 V
V <sub>SS</sub> to GND	+0.3 V to −48 V
Analog Inputs <sup>1</sup>	V <sub>SS</sub> − 0.3 V to V <sub>DD</sub> + 0.3 V or 30 mA, whichever occurs first
Digital Inputs <sup>1</sup>	V <sub>SS</sub> − 0.3 V to V <sub>DD</sub> + 0.3 V or 30 mA, whichever occurs first
Peak Current, Sx or Dx Pin	60 mA (pulsed at 1 ms, 10% duty cycle maximum)
Continuous Current, Sx or Dx <sup>2</sup>	Data + 15%
Temperature	
Operating Range	−40°C to +125°C
Storage Range	−65°C to +150°C
Junction	150°C
Thermal Impedance, θ <sub>JA</sub>	
16-Lead TSSOP (4-Layer Board)	112.6°C/W
16-Lead LFCSOP (4-Layer Board)	30.4°C/W
Reflow Soldering Peak Temperature, Pb Free	260(+0/−5)°C

<sup>1</sup> Overvoltages at the INx, Sx, and Dx pins are clamped by internal diodes.  
Limit current to the maximum ratings given.

<sup>2</sup> See Table 5.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Only one absolute maximum rating can be applied at any one time.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

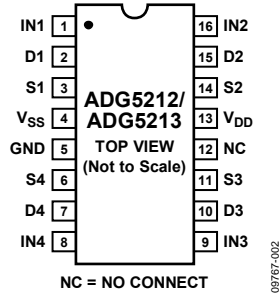

Figure 2. TSSOP Pin Configuration

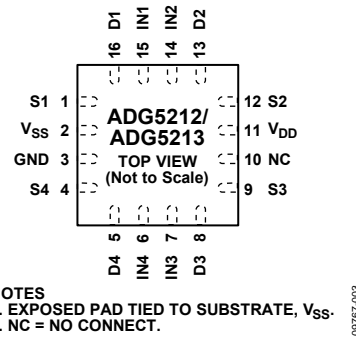

Figure 3. LFCSP Pin Configuration

Table 7. Pin Function Descriptions

Pin No.		Mnemonic	Description
TSSOP	LFCSP		
1	15	IN1	Logic Control Input.
2	16	D1	Drain Terminal. This pin can be an input or an output.
3	1	S1	Source Terminal. This pin can be an input or an output.
4	2	V <sub>SS</sub>	Most Negative Power Supply Potential.
5	3	GND	Ground (0 V) Reference.
6	4	S4	Source Terminal. This pin can be an input or an output.
7	5	D4	Drain Terminal. This pin can be an input or an output.
8	6	IN4	Logic Control Input.
9	7	IN3	Logic Control Input.
10	8	D3	Drain Terminal. This pin can be an input or an output.
11	9	S3	Source Terminal. This pin can be an input or an output.
12	10	NC	No Connect. These pins are open.
13	11	V <sub>DD</sub>	Most Positive Power Supply Potential.
14	12	S2	Source Terminal. This pin can be an input or an output.
15	13	D2	Drain Terminal. This pin can be an input or an output.
16	14	IN2	Logic Control Input.
N/A <sup>1</sup>	EP	Exposed pad	Exposed Pad. The exposed pad is connected internally. For increased reliability of the solder joints and maximum thermal capability, it is recommended that the pad be soldered to the substrate, V <sub>SS</sub> .

<sup>1</sup> N/A means not applicable.

## TERMINOLOGY

### $I_{DD}$

$I_{DD}$  represents the positive supply current.

### $I_{SS}$

$I_{SS}$  represents the negative supply current.

### $V_D, V_S$

$V_D$  and  $V_S$  represent the analog voltage on Terminal Dx and Terminal Sx, respectively.

### $R_{ON}$

$R_{ON}$  represents the ohmic resistance between Terminal Dx and Terminal Sx.

### $\Delta R_{ON}$

$\Delta R_{ON}$  represents the difference between the  $R_{ON}$  of any two channels.

### $R_{FLAT(ON)}$

Flatness that is defined as the difference between the maximum and minimum value of on resistance measured over the specified analog signal range is represented by  $R_{FLAT(ON)}$ .

### $I_S$ (Off)

$I_S$  (Off) is the source leakage current with the switch off.

### $I_D$ (Off)

$I_D$  (Off) is the drain leakage current with the switch off.

### $I_D$ (On), $I_S$ (On)

$I_D$  (On) and  $I_S$  (On) represent the channel leakage currents with the switch on.

### $V_{INL}$

$V_{INL}$  is the maximum input voltage for Logic 0.

### $V_{INH}$

$V_{INH}$  is the minimum input voltage for Logic 1.

### $I_{INL}, I_{INH}$

$I_{INL}$  and  $I_{INH}$  represent the low and high input currents of the digital inputs.

### $C_D$ (Off)

$C_D$  (Off) represents the off switch drain capacitance, which is measured with reference to ground.

### $C_S$ (Off)

$C_S$  (Off) represents the off switch source capacitance, which is measured with reference to ground.

### $C_D$ (On), $C_S$ (On)

$C_D$  (On) and  $C_S$  (On) represent on switch capacitances, which are measured with reference to ground.

### $C_{IN}$

$C_{IN}$  is the digital input capacitance.

### $t_{ON}$

$t_{ON}$  represents the delay between applying the digital control input and the output switching on (see Figure 30).

### $t_{OFF}$

$t_{OFF}$  represents the delay between applying the digital control input and the output switching off (see Figure 30).

### $t_D$

$t_D$  represents the off time measured between the 80% point of both switches when switching from one address state to another.

### Off Isolation

Off isolation is a measure of unwanted signal coupling through an off switch.

### Charge Injection

Charge injection is a measure of the glitch impulse transferred from the digital input to the analog output during switching.

### Crosstalk

Crosstalk is a measure of unwanted signal that is coupled through from one channel to another as a result of parasitic capacitance.

### Bandwidth

Bandwidth is the frequency at which the output is attenuated by 3 dB.

### On Response

On response is the frequency response of the on switch.

### Insertion Loss

Insertion loss is the loss due to the on resistance of the switch.

### AC Power Supply Rejection Ratio (ACPSRR)

AC power supply rejection ratio (ACPSRR) is the ratio of the amplitude of signal on the output to the amplitude of the modulation. This is a measure of the ability of the device to avoid coupling noise and spurious signals that appear on the supply voltage pin to the output of the switch. The dc voltage on the device is modulated by a sine wave of 0.62 V p-p.

## TRENCH ISOLATION

In the ADG5212 and ADG5213, an insulating oxide layer (trench) is placed between the NMOS and the PMOS transistors of each CMOS switch. Parasitic junctions, which occur between the transistors in junction isolated switches, are eliminated, and the result is a completely latch-up proof switch.

In junction isolation, the N and P wells of the PMOS and NMOS transistors form a diode that is reverse-biased under normal operation. However, during overvoltage conditions, this diode can become forward-biased. A silicon controlled rectifier (SCR) type circuit is formed by the two transistors, causing a significant amplification of the current that, in turn, leads to latch-up. With trench isolation, this diode is removed and the result is a latch-up proof switch.

Figure 32. Trench Isolation

09767-022

## APPLICATIONS INFORMATION

The ADG52xx family of switches and multiplexers provides a robust solution for instrumentation, industrial, automotive, aerospace, and other harsh environments that are prone to latch-up, which is an undesirable high current state that can lead to device failure and persists until the power supply is turned off. The ADG5212/ADG5213 high voltage switches allow single-supply operation from 9 V to 40 V and dual-supply operation from  $\pm 9$  V to  $\pm 22$  V.

## OUTLINE DIMENSIONS

COMPLIANT TO JEDEC STANDARDS MO-153-AB

Figure 33. 16-Lead Thin Shrink Small Outline Package [TSSOP] (RU-16)

Dimensions shown in millimeters

FOR PROPER CONNECTION OF THE EXPOSED PAD, REFER TO THE PIN CONFIGURATION AND FUNCTION DESCRIPTIONS SECTION OF THIS DATA SHEET.

COMPLIANT TO JEDEC STANDARDS MO-220-WGGC.
