1. SCOPE

1.1 <u>Scope</u>. This drawing documents the general requirements of a high performance 8 channel CMOS multiplexer microcircuit, with an operating temperature range of -55°C to +125°C.

1.2 <u>Vendor Item Drawing Administrative Control Number</u>. The manufacturers PIN is the item of identification. The vendor item drawing establishes an administrative control number for identifying the item on the engineering documentation:

<u>V62/11612</u> -	<u>01</u> 	X	B T
Drawing	Device type	Case outline	Lead finish
number	(See 1.2.1)	(See 1.2.2)	(See 1.2.3)
1.2.1 <u>Device type(s)</u> .			
Device type	Generic	<u>(</u>	Circuit function
01	ADG1408-EP	8 ch	annel CMOS multiplexer

1.2.2 <u>Case outline(s)</u>. The case outline(s) are as specified herein.

Outline letter	Number of pins	JEDEC PUB 95	Package style
Х	16	MO-153-AB	Plastic thin shrink small outline

1.2.3 Lead finishes. The lead finishes are as specified below or other lead finishes as provided by the device manufacture:

Finish designator	Material
A	Hot solder dip
B	Tin-lead plate
C	Gold plate
D	Palladium
E	Gold flash palladium
Z	Other

DLA LAND AND MARITIME	SIZE	CODE IDENT NO.	DWG NO.
COLUMBUS, OHIO	A	16236	V62/11612
		REV	PAGE 2

1.3 Absolute maximum ratings. 1/

Positive supply voltage (V_DD) to negative supply voltage (V_SS)	35 V
V _{DD} to ground (GND)	0.3 V to +25 V
V _{SS} to GND	+0.3 V to -25 V
Analog inputs, digital inputs <u>2</u> /	$V_{SS} - 0.3 V$ to $V_{DD} + 0.3 V$ or
	30 mA, whichever occurs first
Continuous current, source (S) or drain (D)	
Peak current, S or D (pulsed at 1 ms, 10% duty cycle maximum)	350 mA
Storage temperature range (T _{STG})	65°C to +150°C
Junction temperature (T _J)	+150°C
Lead temperature, soldering:	
Vapor phase (60 seconds)	215°C
Infared (15 seconds)	220°C
Thermal resistance, junction to ambient (θ_{JC})	50°C/W
Thermal resistance, junction to ambient (θ_{JA})	150.4°C/W

1.4 Recommended operating conditions. 3/4/

Operating free-air temperature range (T _A)	55°C to +125°C
--	----------------

^{4/} All ratings and specifications, please refer to relevant EP datasheet.

DLA LAND AND MARITIME	SIZE	CODE IDENT NO.	DWG NO.
COLUMBUS, OHIO	A	16236	V62/11612
		REV	PAGE 3

<u>1</u>/ Stresses beyond those listed under "absolute maximum rating" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

^{2/} Overvoltages at A, EN, S, or D are clamped by internal diodes. Current should be limited to the maximum ratings given.

^{3/} Use of this product beyond the manufacturers design rules or stated parameters is done at the user's risk. The manufacturer and/or distributor maintain no responsibility or liability for product used beyond the stated limits.

2. APPLICABLE DOCUMENTS

JEDEC PUB 95 - Registered and Standard Outlines for Semiconductor Devices

(Applications for copies should be addressed to the JEDEC Office, 3103 North 10th Street, Suite 240-S, Arlington, VA 22201-2107 or online at http://www.jedec.org)

3. REQUIREMENTS

3.1 <u>Marking</u>. Parts shall be permanently and legibly marked with the manufacturer's part number as shown in 6.3 herein and as follows:

- A. Manufacturer's name, CAGE code, or logo
- B. Pin 1 identifier
- C. ESDS identification (optional)

3.2 <u>Unit container</u>. The unit container shall be marked with the manufacturer's part number and with items A and C (if applicable) above.

3.3 <u>Electrical characteristics</u>. The maximum and recommended operating conditions and electrical performance characteristics are as specified in 1.3, 1.4, and table I herein.

3.4 <u>Design, construction, and physical dimension</u>. The design, construction, and physical dimensions are as specified herein.

3.5 Diagrams.

3.5.1 <u>Case outline</u>. The case outline shall be as shown in 1.2.2 and figure 1.

3.5.2 <u>Terminal connections</u>. The terminal connections shall be as shown in figure 2.

3.5.3 <u>Truth table</u>. The truth table shall be as shown in figure 3.

3.5.4 <u>Timing waveforms and test circuits</u>. The timing waveforms and test circuits shall be as shown in figures 4 through 14.

			125°C			45			

TABLE I. <u>Electrical performance characteristics</u> – Continued. <u>1</u>/

1/ Testing and other quality control techniques are used to the extent deemed necessary to assure product performance over the specified temperature range. Product may not necessarily be tested across the full temperature range and all parameters may not necessarily be tested. In the absence of specific parametric testing, product performance is assured by characterization and/or design.

2/ Guaranteed by design, not subject to production test..

Device type		01
Case outline		X
Terminal number	Terminal symbol	Description
1	A0	Logic control input.
2	EN	Active high digital input. When low, the device is disabled and all switches are off. When high, Ax logic inputs determine on switches.
3	V _{SS}	Most negative power supply potential. In supply single applications, it can be connected to ground.
4	S1	Source terminal 1. Can be an input or an output.
5	S2	Source terminal 2. Can be an input or an output.
6	S3	Source terminal 3. Can be an input or an output.
7	S4	Source terminal 4. Can be an input or an output.
8	D	Drain terminal. Can be an input or an output.
9	S8	Source terminal 8. Can be an input or an output.
10	S7	Source terminal 7. Can be an input or an output.
11	S6	Source terminal 6. Can be an input or an output.
12	S5	Source terminal 5. Can be an input or an output.
13	V _{DD}	Most positive power supply potential.
14	GND	Ground (0 V) reference.
15	A2	Logic control input.
16	A1	Logic control input.

4. VERIFICATION

4.1 <u>Product assurance requirements</u>. The manufacturer is responsible for performing all inspection and test requirements as indicated in their internal documentation. Such procedures should include proper handling of electrostatic sensitive devices, classification, packaging, and labeling of moisture sensitive devices, as applicable.

5. PREPARATION FOR DELIVERY

5.1 <u>Packaging</u>. Preservation, packaging, labeling, and marking shall be in accordance with the manufacturer's standard commercial practices for electrostatic discharge sensitive devices.

6. NOTES

6.1 ESDS. Devices are electrostatic discharge sensitive and are classified as ESDS class 1 minimum.

6.2 <u>Configuration control</u>. The data contained herein is based on the salient characteristics of the device manufacturer's data book. The device manufacturer reserves the right to make changes without notice. This drawing will be modified as changes are provided.

6.3 <u>Suggested source(s) of supply</u>. Identification of the suggested source(s) of supply herein is not to be construed as a guarantee of present or continued availability as a source of supply for the item.
