### Functional Diagram

### General Description

The HMC722LP3E is an AND/NAND/OR/NOR function designed to support data transmission rates of up to 13 Gbps, and clock frequencies as high as 13 GHz. The HMC722LP3E may be easily configured to provide any of the following logic functions: AND, NAND, OR and NOR. The HMC722LP3E also features an output level control pin, VR, which allows for loss compensation or for signal level optimization.

All input signals to the HMC722LP3E are terminated with 50 Ohms to ground on-chip, and may be either AC or DC coupled. The differential outputs of the HMC722LP3E may be either AC or DC coupled. Outputs can be connected directly to a 50 Ohm to ground terminated system, while DC blocking capacitors may be used if the terminating system is 50 Ohms to a non-ground DC voltage. The HMC722LP3E operates from a single -3.3V DC supply, and is available in a RoHS compliant 3x3 mm SMT package.

[2] Circuit Board Material: Rogers 4350 or Arlon 25FR

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads should be connected directly to the ground plane similar to that shown. The exposed package base should be connected to Vee. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
