

EW8051 Embedded Workbench V5.12

- Fully Integrated Development Environment Under Windows*
- Plug and Play Installation
- Compile, Assemble, Link, Make and Debug With a Mouse-Click
- Intuitive Dialog Boxes
- Error Sensitive Editor With C-Syntax Coloring
- Global and Local Options

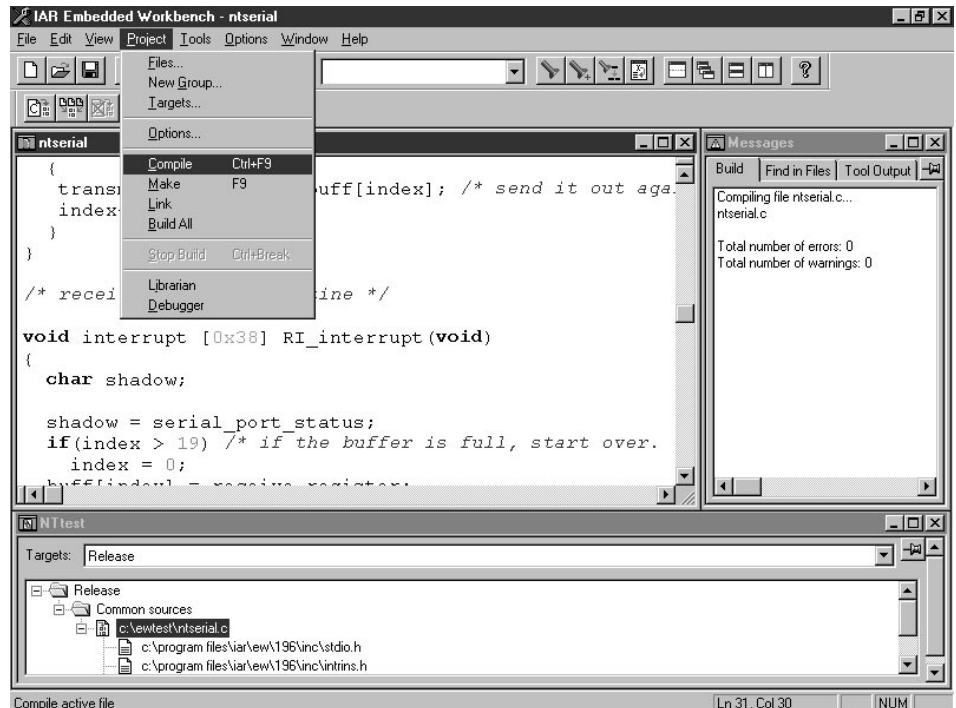

IAR 8051 Embedded Workbench kit is a complete development solution for any 8x51 application. Create projects, edit files, compile, assemble, link, build, and debug any 8x51 application without leaving the Workbench or Windows.

Embedded Workbench

IAR 8051 Embedded Workbench package comes with the IAR 8051 C compiler kit and the C-SPY 8051 simulation kit plus a real time operation system called Tiny51.

Windows Editor and User Interface

A full featured Windows editor and a very friendly point and click Windows user interface are part of the IAR 8051 workbench kit. You will be able to go through all of your development cycle without leaving the Workbench and Windows. (DOS version still supported).
