

# ISL97519A Evaluation Board Application Manual

## Description

The ISL97519AIUZ-EVALZ evaluation board is an evaluation kit for evaluating the ISL97519AIUZ-EVALZ, a step-up voltage regulator that operates with high frequency and high efficiency. This evaluation kit is designed to deliver over 90% efficiency.

The ISL97519AIUZ-EVALZ kit provides a dip switch that allows users to select either 600kHz or 1.2MHz switching frequency.

## Key Features

- A Complete Evaluation Platform for Evaluation of ISL97519A
- Input Voltage: 2.3V to 5.5V
- Proven Evaluation Board Layout
- Pb-free (RoHS Compliant)

## Pin Configuration

## Ordering Information

PART #	DESCRIPTION
ISL97519AIUZ-EVALZ	Evaluation Board for ISL97519A

## Quick Setup Guide

- Step 1:** Connect the power supply between the headers of VIN and GND. The positive output of the power supply should be connected to the VIN header. Set the power supply voltage between 2.3V and 5V, and the current limit at 3A.
- Step 2:** Connect the E-load between the headers of VOUT and GND. The positive input of the E-load should be connected to the VOUT header. Set the E-load current. The load current should not exceed the maximum output current that the part can supply.
- Step 3:** Close pins 1 and 4 of S1 to tie the FSEL pin to VIN. This will set the switching frequency to 1.2MHz. Open pins 1 and 4 to pull FSEL to ground with R4 to set the frequency to 600kHz.
- Step 4:** Close pins 2 and 3 of S1 to tie the EN pin to VIN in order to enable the part. To disable the part, open pins 2 and 3 in order to pull EN to ground with R3 to disable the part.

Make sure all the connections on the evaluation board are correct, then turn on the power supply and E-load. The part will start to operate.

## Maximum Output Current

The MOSFET current limit is normally 2.0A and guaranteed at 1.7A. This restricts the maximum output current that the ISL97519A can drive. Table 1 shows the ISL97519AIUZ-EVALZ maximum output current,  $I_{O_{MAX}}$  at different input and output voltages.

TABLE 1. TYPICAL MAXIMUM OUTPUT CURRENT

V <sub>IN</sub> (V)	V <sub>OUT</sub> (V)	I <sub>O<sub>MAX</sub></sub> (mA)
2.5	5	870
2.5	9	500
2.5	12	380
3.3	5	1150
3.3	9	655
3.3	12	500
5	9	990
5	12	750
