

# Wide V<sub>IN</sub> Dual Integrated Buck Regulator With 6A/6A Continuous Output Current and LDOs

## Specifications

F <sub>SW</sub> POSITION	SWITCHING FREQUENCY (kHz)	V <sub>IN</sub> RANGE (V)	V <sub>OUT</sub> RANGE (V)	PART SIZE (2mm)
F <sub>SW</sub> = GND	300	4.5V to 16V	0.6V to 5V	5x6
F <sub>SW</sub> = OPEN	500			
F <sub>SW</sub> = VCC	1000			

### NOTES:

1. The Evaluation Kit default configuration is V<sub>OUT1</sub> = 3.3V, V<sub>OUT2</sub> = 5V, F<sub>SW</sub> = 1MHz.
2. V<sub>REF</sub> is 0.8.

## Description

The ISL95901EVAL1Z kit is intended for use by customers with requirements for Point-of-Load applications sourcing from 4.5V to 16V. The ISL95901EVAL1Z evaluation board is used to demonstrate the performance of the ISL95901 dual high-efficient buck regulator and LDOs.

The ISL95901 is offered in a 5mmx6mm 46 Ld QFN package.

## Key Features

- Wide input voltage range from 4.5V to 16V
- Adjustable output voltages with continuous output current up to 6A
- 1% Accuracy over-temperature and V<sub>CC</sub> range
- Built-in low-power LDO for external μC
- Built-in compensation
- Internally Set SS and OCP
- Independent enable, power-good, and standby control inputs for each output
- Innovative R<sup>4</sup>(TM) modulator
- Boot undervoltage detection

## Recommended Equipment

The following materials are recommended to perform testing:

- 0V to 20V power supply with at least 10A source current capability or 5V battery
- Electronic loads capable of sinking current up to 7A
- Digital Multimeters (DMMs)
- 100MHz quad-trace oscilloscope
- Signal generator

## Quick Setup Guide

1. Ensure that the circuit is correctly connected to the supply and loads prior to applying any power.
2. Connect the bias supply to V<sub>IN</sub>, the plus terminal to V<sub>IN1</sub>, P1 and the negative return to PGND, P2.
3. Connect the output load to V<sub>OUT1</sub> and V<sub>OUT2</sub>, the plus terminal to V<sub>OUT1</sub>, P6 and V<sub>OUT2</sub>, P8. The negative return to PGND, P7and P9.
4. Verify that the position is ON for SW1 and SW4.
5. Turn on the power supply.
6. Verify the output voltage is 3.3V for V<sub>OUT1</sub> and 5V for V<sub>OUT2</sub>.

## Evaluating the Other Output Voltage

The ISL95901 kit output is preset to 3.3V (V<sub>OUT1</sub>) and 5V (V<sub>OUT2</sub>), however, output voltages can be adjusted from 0.8V to 5V. The output voltage programming resistor, R<sub>3</sub>, R<sub>4</sub> will depend on the desired output voltage of the regulator. The value for the feedback resistor is typically between 10Ω and 200kΩ, as shown in Equation 1.

$$R_{3,4} = R_{1,2} \left( \frac{V_O - V_{FB}}{V_{FB}} \right) \quad (\text{EQ. 1})$$

If the output voltage desired is 0.8V, then R<sub>3,4</sub> is left unpopulated and R<sub>1,2</sub> is shorted. For faster response performance, add 100pF in parallel to R<sub>3,4</sub>. Check bode plot to insure optimum performance.

## Switches Control

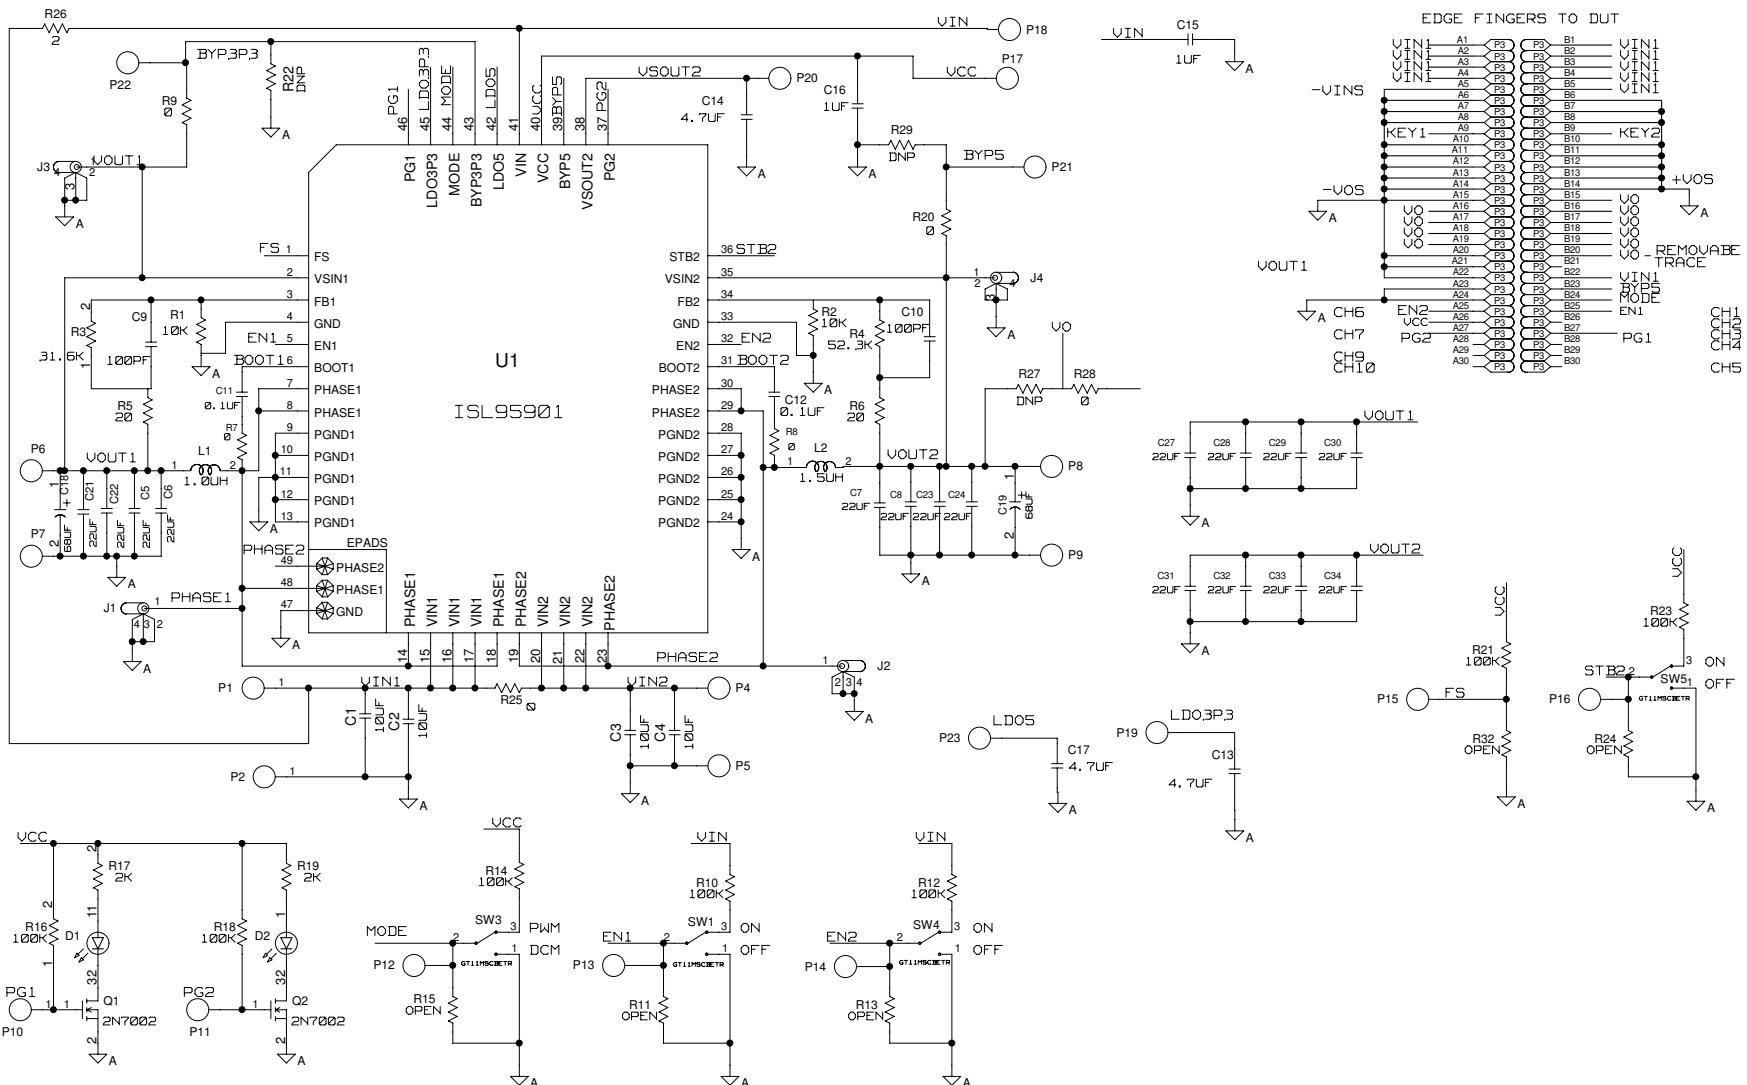

The ISL95901 evaluation board contains switches SW1, SW3 and SW4 for various controls of the ISL95901 circuitries. Table 1 details this function.

TABLE 1. SWITCH SETTINGS

SW1	ENABLE	FUNCTION
1	OFF	DISABLE VOUT1
3	ON	ENABLE VOUT1
SW3	MODE	FUNCTION
1	PWM	Fixed PWM frequency at light load
3	DCM	Force continuous mode
SW4	ENABLE	FUNCTION
1	OFF	DISABLE VOUT2
3	ON	ENABLE VOUT2
