## Interfacing the X24C44, X24C45 NOVRAMs to the Motorola 6803 Microcontroller

Application Note	July 15, 2005	AN25.0
	•	

Author: Applications Staff

The following code demonstrates how the Intersil X24C44, X24C45 serial NOVRAMs can be interfaced to the Motorola 6803 microcontroller when connected as shown in Figure 1. The code uses three pins from port 1 to implement the

interface. Additional code can be found on the Intersil web site at http://www.intersil.com that will implement interfaces between several other Motorola microcontroller families and most Intersil serial devices.

## FIGURE 1. INTERFACING AN X24C44 TO A 6803 MICROCONTROLLER

\* THIS CODE WAS DESIGNED TO DEMONSTRATE HOW THE X24C44 COULD BE INTERFACED TO \* \* THE 6803 MICROCONTROLLER. THE INTERFACE USES 3 LINES FROM PORT 1 (P17, \* P16, AND P15) TO COMMUNICATE. THE DI AND DO PINS ON THE X24C44 ARE TIED \* TOGETHER WHICH ALLOWS 1 LESS PORT LINE TO BE USED. \* THE CODE SHOWN DEMONSTRATES RCL, WREN, READ, WRITE, AND STORE \* INSTRUCTIONS. THE REMAINING INSTRUCTIONS (WRDS AND ENAS) CAN BE ISSUED \* USING THE SAME ROUTINE AS OTHER NON-DATA INSTRUCTIONS. \* THE PROGRAM ISSUES A SEQUENCE OF INSTRUCTIONS TO READ THE CONTENTS OF \* ADDRESS 5 AND STORES THE SAME VALUE IN ADDRESS 9. THE SEQUENCE OF \* INSTRUCTIONS IS AS FOLLOWS : \* 1. RCL SETS THE PREVIOUS RECALL LATCH \* 2. WREN SETS THE WRITE ENABLE LATCH \* 3. READ DATA FROM ADDRESS 5 IS READ \* 4. WRITE THE DATA READ DURING STEP 3 IS WRITTEN TO ADDRESS 9 \* 5. STO THE RAM'S CONTENTS IS TRANSFERED TO THE EEPROM \* DATA TRANSFER IS PERFORMED WITH THE MOST SIGNIFICANT BIT FIRST. DURING \* THE READ AND WRITE INSTRUCTIONS THE DATA SEQUENCE IS INVERTED FROM THAT \* SHOWN IN THE DATA BOOK (D15 IS SHIFTED FIRST). SKHI EOU \$20 MASK TO GENERATE A 1 ON SK SKLO EOU \$DF MASK TO GENERATE A 0 ON SK DTHT EOU \$80 MASK TO GENERATE A 1 ON DI DILO EQU \$7F MASK TO GENERATE A 0 ON DI \$40 MASK TO GENERATE A 1 ON CE CEHI EOU CELO EQU \$BF MASK TO GENERATE A 0 ON CE WRDS EOU \$80 RESET WRITE ENABLE LATCH STO \$81 TRANSFERS FROM RAM TO EEPROM EOU ENAS EOU \$82 PLACES PART INTO POWER DOWN MODE WRITE EQU \$83 RAM WRITE WREN EOU \$84 SET WRITE ENABLE LATCH RCL EQU \$85 TRANSFERS FROM EEPROM TO RAM, RESETS \* WRITE ENABLE LATCH EOU \$86 READ RAM READ DDR 1 EQU \$00 DATA DIRECTION REGISTER FOR PORT 1 PORT1 EQU \$02 ADDRESS FOR PORT 1 \$80 LOCATION FOR X24C44 ADDRESS TO ACCESS ADDR EOU INST EQU \$81 INSTRUCTION FOR PART RWDAT \$82 LOCATION FOR X24C44 DATA TRANSFERED EOU \$84 DATA TO BE SENT TO DUT PIDATA EOU DD1DAT EQU DATA TO BE STORED IN PORT 1 DIRECTION REGISTER \$85 \* RESET VECTOR TO BEGINNING OF PROGRAM CODE \* \*\*\*\*\*\* ORG ŚFFFE RESET VECTOR TO PROGRAM ENTRY POINT FDB \$E000 \*\*\*\*\*\*\* \* START OF PROGRAM EXECUTION \* \*\*\*\*\*
