

# Single 8/Differential 4-Channel CMOS Analog Multiplexers with Active Overvoltage Protection

## HI-548/883, HI-549/883

The HI-548/883 and HI-549/883 are analog multiplexers with active overvoltage protection and guaranteed  $r_{ON}$  matching. Analog input levels may greatly exceed either power supply without damaging the device or disturbing the signal path of other channels. Active protection circuitry assures that signal fidelity is maintained even under fault conditions that would destroy other multiplexers.

Analog inputs can withstand constant  $70V_{P-P}$  levels with  $\pm 15V$  supplies. Digital inputs will also sustain continuous faults up to 4V greater than either supply. In addition, signal sources are protected from short circuiting should multiplexer supply loss occur. Each input presents  $1k\Omega$  of resistance under this condition. These features make the HI-548/883 and HI-549/883 ideal for use in systems where the analog inputs originate from external equipment or separately powered circuitry. Both devices are fabricated with 44V Dielectrically Isolated CMOS technology. The HI-548/883 is an 8-channel device, and the HI-549/883 is a 4-channel differential version. If input overvoltage protection is not needed, the HI-508/883 and HI-509/883 multiplexers are recommended. For further information see Application Note [AN520](#).

## Features

- This Circuit is Processed in Accordance to MIL-STD-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- No Channel Interaction During Overvoltage
- Guaranteed  $r_{ON}$  Matching
- 44V Maximum Power Supply
- Break-Before-Make Switching
- Analog Signal Range . . . . .  $\pm 15V$
- Access Time (Max) . . . . .  $1.0\mu s$
- Power Dissipation (Max) . . . . .  $45mW$

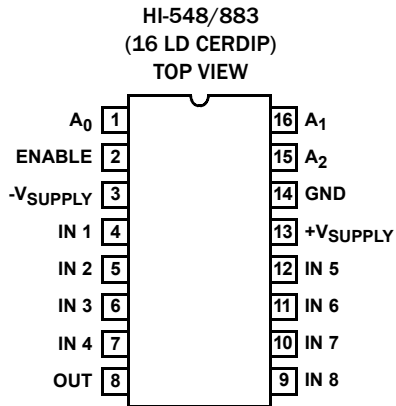

## Applications

- Data Acquisition Systems
- Control Systems
- Telemetry

## Ordering Information

## Absolute Maximum Ratings

Voltage Between Supply Pins	44V
+V <sub>SUPPLY</sub> to Ground	22V
-V <sub>SUPPLY</sub> to Ground	25V
Analog Input Voltage, +V <sub>S</sub>	+V <sub>SUPPLY</sub> +20V
-V <sub>S</sub>	-V <sub>SUPPLY</sub> -20V
Digital Input Voltage, +V <sub>EN</sub> , +V <sub>A</sub>	+V <sub>SUPPLY</sub> +4V
-V <sub>EN</sub> , -V <sub>A</sub>	-V <sub>SUPPLY</sub> +4V or 20mA, whichever occurs first
Continuous Current, S or D	20mA
Peak Current, S or D (Pulsed at 1ms, 10% Duty Cycle Max)	40mA
ESD Classification	≤2000V

## Thermal Information

Thermal Resistance	$\theta_{JA}$ (°C/W)	$\theta_{JC}$ (°C/W)
CerDIP Package	80	26
CLCC Package	76	19
Power Dissipation (AT +75 °C)		
CerDIP Package	1.25W	
CLCC Package	1.32W	
Power Dissipation Derating Factor (Above +75 °C)		
CerDIP Package	.125mW/°C	
CLCC Package	.132mW/°C	
Junction Temperature	+175 °C	
Storage Temperature Range	-65 °C to +150 °C	
Lead Temperature (Soldering 10s)	+275 °C	

## Recommended Operating Conditions

Operating Temperature Range	-55 °C to +125 °C
Operating Supply Voltage ( $\pm V_{SUPPLY}$ )	$\pm 15V$
Analog Input Voltage (V <sub>S</sub> )	$\pm V_{SUPPLY}$
Logic Low Level (V <sub>AL</sub> )	0V to 0.8V
Logic High Level (V <sub>AH</sub> )	+4V to +V <sub>SUPPLY</sub>
Max RMS Current, S or D	8mA

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

**NOTES:**

1. Used for forcing conditions for all DC Tests, unless otherwise specified.
2. To drive from DTL/TTL circuits,  $1k\Omega$  pull-up resistors to  $+5.0V$  supply are recommended.
3. The parameters listed in this table are controlled via design or process parameters and are not directly tested. These parameters are characterized upon initial design release and upon design changes which would affect these characteristics.
4. Worst case isolation occurs on channel 8B due to proximity of the output pins.

**NOTES:**

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH.

#### NOTES:

1. Metallized castellations shall be connected to plane 1 terminals and extend toward plane 2 across at least two layers of ceramic or completely across all of the ceramic layers to make electrical connection with the optional plane 2 terminals.
2. Unless otherwise specified, a minimum clearance of 0.015 inch (0.38mm) shall be maintained between all metallized features (e.g., lid, castellations, terminals, thermal pads, etc.)
3. Symbol "N" is the maximum number of terminals. Symbols "ND" and "NE" are the number of terminals along the sides of length "D" and "E", respectively.
4. The required plane 1 terminals and optional plane 2 terminals (if used) shall be electrically connected.
5. The corner shape (square, notch, radius, etc.) may vary at the manufacturer's option, from that shown on the drawing.
6. Chip carriers shall be constructed of a minimum of two ceramic layers.
7. Dimension "A" controls the overall package thickness. The maximum "A" dimension is package height before being solder dipped.
8. Dimensioning and tolerancing per ANSI Y14.5M-1982.
9. Controlling dimension: INCH.
