

# Single Phase PWM Regulator for IMVP8™ CPUs

## ISL95854

The [ISL95854](#), fully compliant with Intel IMVP8™ specifications, provides a complete solution for microprocessor core power supply. It also provides a Voltage Regulator (VR) with an integrated gate driver. The VR uses the serial control bus (SVID) to communicate with the CPU and achieves lower cost and smaller board area.

Based on Intersil's Robust Ripple Regulator (R3™) technology, the PWM modulator compared to traditional modulators, has faster transient settling time, variable switching frequency during load transients and has improved light load efficiency with its ability to automatically change switching frequency.

The ISL95854 has several other key features. The output supports DCR current sensing with single NTC thermistor for DCR temperature compensation or accurate resistor current sensing. The output comes with remote voltage sense, programmable  $V_{BOOT}$  voltage, programmable  $I_{CCMAX}$ , programmable voltage transition slew rate, adjustable switching frequency, overcurrent protection and power-good output.
