## Single Output DC/DC Converter

### DESCRIPTIONS

The 4000HN, single output power modules are 25 to 40 watt DC/DC converters available in a single output configuration providing 3.3 VDC to 15 VDC outputs in a compact, industry standard 2" X 2" X 0.5" package. These 400kHz, switching converters are available in 12, 24 and 48 VDC inputs making them one of the most versatile product lines in the market with efficiencies up to 89%. Advanced surface mount construction allows these converters to achieve outstanding thermal performance eliminating the need for thermal potting compounds and thereby enhancing manufacturing efficiency to reduce costs.

### OUTPUT CHARACTERISTICS

	Min	Typ	Max	Unit/Comments
Output Voltage Set Point		±1		% Output voltage at nominal line & FL
Total Band Error	-2	+2		% Output voltage including line/load regulation setting
Line Regulation		±0.5		% Output voltage measured from min. input line to maximum
Load Regulation		±0.5		% Output voltage measured from FL to 10% load
Temperature Coefficient		±0.01		% per degree C
Ripple/Noise	60	100		mV p-p measured at 20 MHz bandwidth with external 1 uF capacitor
Load Voltage and Current				Refer to model selection chart
Load Transient Response		±2		% Deviation of Vout voltage for a 25% load change for 200µS
Short Circuit Protection				Indefinite, Automatic Recovery
Output Voltage Trim Range		±10		% Output voltage. Place ext. resistor between pins 9 - 6 to trim down. Between pins 9 - 5 to trim up
Overvoltage Protection		120		%; Clamp type

### FEATURES

- Up to 89% Efficiency
- Single Output, Up to 40 watt converter
- Available in 12, 24 and 48 VDC Inputs
- Industry Standard 2" X 2" X 0.5" Package
- Output Over Voltage, Input Over Voltage & Short Circuit Protection

## OUTPUT VOLTAGE ADJUSTMENT (4000HN SINGLE SERIES)

The converter's output voltage may be trimmed by up to  $\pm 10\%$  of the nominal output voltage.

### TRIM UP

Trim output voltage up by connecting an external resistor between Pins 8 and 9. Use the following equation, reference Table 1 for variables A and B.

$$R_{adj-up} = \frac{A}{\Delta \%} - B \text{ (k}\Omega\text{)}$$

#### Example:

Trim 5% up for 12V Output units,  
where A = 1.58, B = 15,  $\Delta \% = 0.05$

$$R_{adj-up} = \frac{1.58}{0.05} - 15 = 16.6 \text{ k}\Omega$$

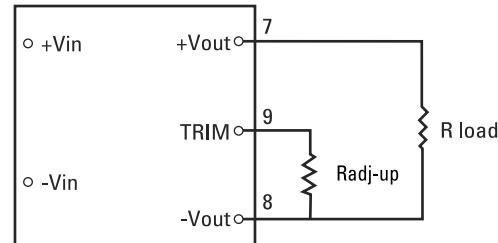

Table 1.

Output Voltage	A	B
3.3V	1.25	11
5V	1.00	9.1
12V	1.58	15
15V	1.67	15

### TRIM DOWN

Trim output voltage down by connecting an external resistor between Pins 7 and 9. Use the following equation, reference Table 2 for variables C and D.

$$R_{adj-down} = \frac{C}{\Delta \%} - D \text{ (k}\Omega\text{)}$$

#### Example:

Trim 5% down for 15V Output units,  
where C = 8.33, D = 25,  $\Delta \% = 0.05$

$$R_{adj-down} = \frac{8.33}{0.05} - 25 = 141.6 \text{ k}\Omega$$

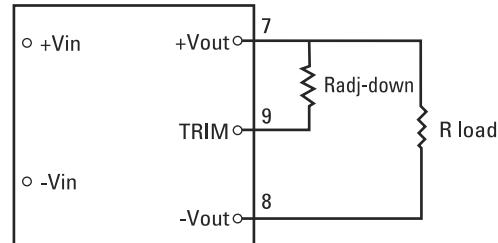

Table 2.

Output Voltage	C	D
3.3V	2.07	14.3
5V	1.00	11.1
12V	6.09	22.6
15V	8.33	25

## Dual Output DC/DC Converter

### DESCRIPTIONS

The 4000HN, dual output power modules are 30 to 40 watt DC/DC converters available in a dual output configuration providing both digital and analog outputs in a compact, industry standard 2" X 2" X 0.5" package. These 400kHz, switching converters are available in 12, 24 and 48 VDC inputs making them one of the most versatile product lines in the market with efficiencies up to 88%. Advanced surface mount construction allows these converters to achieve outstanding thermal performance eliminating the need for thermal potting compounds and thereby enhancing manufacturing efficiency to reduce costs.

### OUTPUT CHARACTERISTICS

	Min	Typ	Max	Unit/Comments
Output Voltage Set Point		±1		% Output voltage at nominal line & FL

## OUTPUT VOLTAGE ADJUSTMENT (4000HN DUAL SERIES)

The converter's output voltage may be trimmed by up to  $\pm 10\%$  of the nominal output voltage.

### TRIM UP

Trim output voltage up by connecting an external resistor between Pins 6 and 9. Use the following equation, reference Table 1 for variable A.

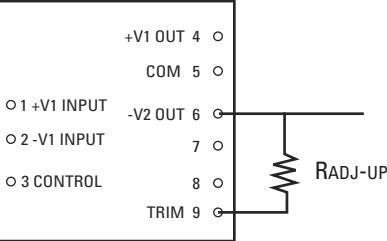

$$R_{adj-up} = \frac{A}{\Delta \%} - 16 \text{ (k}\Omega\text{)}$$

#### Example:

Trim 5% up for 12V Output units,  
where  $A = 1.79$ ,  $\Delta \% = 0.05$

$$R_{adj-up} = \frac{1.79}{0.05} - 16 = 19.8 \text{ k}\Omega$$

Both outputs trimmed up by 5%.

**Table 1.**

Output Voltage	A
$\pm 5V$	1.5
$\pm 12V$	1.79
$\pm 15V$	1.83

### TRIM DOWN

Trim output voltage down by connecting an external resistor between Pins 4 and 9. Use the following equation, reference Table 2 for variables C and D.

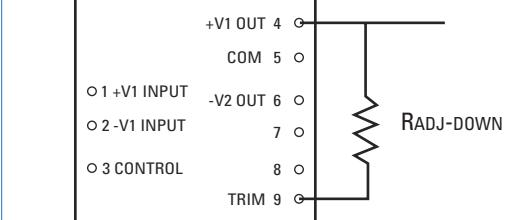

$$R_{adj-down} = \frac{C}{\Delta \%} - D \text{ (k}\Omega\text{)}$$

#### Example:

Trim 5% down for 5V Output units,  
where  $C = 4.5$ ,  $D = 22$ ,  $\Delta \% = 0.05$

$$R_{adj-down} = \frac{4.5}{0.05} - 22 = 68 \text{ k}\Omega$$

Both outputs trimmed down by 5%.

**Table 2.**

Output Voltage	C	D
$\pm 5V$	4.5	22
$\pm 12V$	15.4	33.2
$\pm 15V$	20.2	38

### HOW TO ORDER

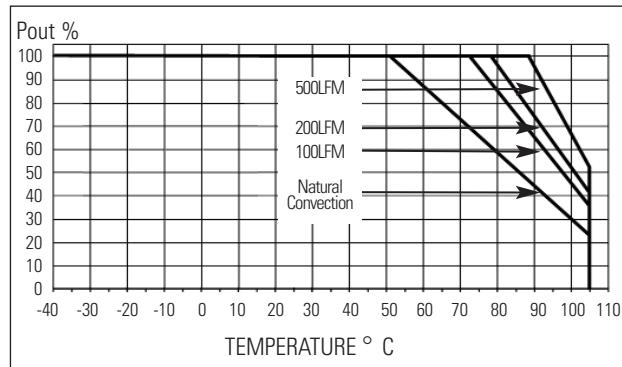

**H Options:** To add external heatsink mounted on the baseplate of the converter please add a “- H” at the end of the part number. Heatsink is provided to improve thermal performance (see derating curves).

## DERATING CURVES

MODEL 4000HN Triple (Without heatsink)

MODEL 4000HN-H Triple (With heatsink)

## OUTPUT VOLTAGE ADJUSTMENT (4000HN TRIPLE SERIES)

The converter's output voltage may be trimmed to  $\pm 10\%$  of the nominal output voltage.

### TRIM UP

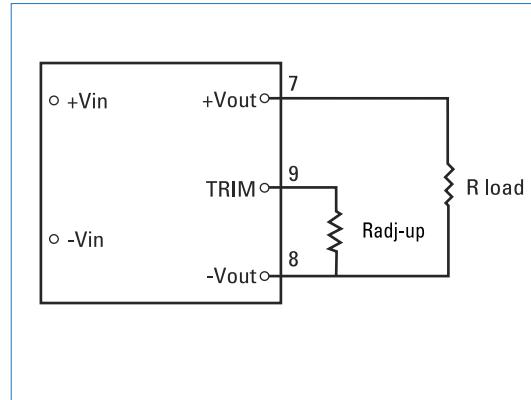

Trim output (all 3) voltage up by connecting an external resistor between Pins 8 and 9. Use the following equation.

$$R_{adj-up} = \frac{1.245}{\Delta \%} - 10 \text{ (k}\Omega\text{)}$$

#### Example:

If we want to trim 5% up,  $\Delta \% = 0.05$

$$R_{adj-up} = \frac{1.245}{0.05} - 10 = 14.9 \text{ k}\Omega$$

### TRIM DOWN

Trim output (all 3) voltage down by connecting an external resistor between Pins 7 and 9. Use the following equation.

$$R_{adj-down} = \frac{1.245}{\Delta \%} - 10 \text{ (k}\Omega\text{)}$$

#### Example:

If we want to trim 3% down,  $\Delta \% = 0.03$

$$R_{adj-down} = \frac{1.245}{0.03} - 10 = 31.5 \text{ k}\Omega$$
