

DSTINIs400/DSTINIs-00x Sockets Evaluation Board

www.maxim-ic.com

GENERAL DESCRIPTION

The TINI[®] sockets boards are motherboards designed to host the corresponding TINI evaluation module. The combination of the two boards allows full evaluation of the features of the target microprocessor. To evaluate the DS80C400, order both a DSTINIm400 and a DSTINIs400.

Although various boards support different evaluation modules, the most popular is the DSTINIs400. It includes a 144-pin SODIMM connector and provides 1-Wire[®], CAN2.0B, serial, and a 10/100 Ethernet PHY for connecting the TINIm400 to the physical world.

The DSTINIm400 and DSTINIs400 are fully assembled and tested circuit boards. When used together they form a complete evaluation system for the DS80C400 network microcontroller. The DSTINIm400 module includes the DS80C400 network microcontroller, a real-time clock, 1MB flash, 1MB static RAM, and support for an external Ethernet PHY for connecting to a wide variety of networks. The circuit board is designed as a module to be plugged into the 144-pin SODIMM connector on the DSTINIS400.

Detailed information about the initial setup process and use of the TINI platform is contained in *Application Note 612: Getting Started with the TINIm400 (DS80C400) Verification Module*.

QUICK START

Recommended Equipment

The sockets board requires an external power supply and cables as needed to access the desired features of the board. The 5V DC power supply is mandatory, but the other cables are required only if that feature is to be used. The specific example shown here is for a TINIm400/TINIs400 system.

Hardware:

5V DC Power Supply

Input Voltage: per customer requirements

Output Voltage: 5V DC $\pm 10\%$

Output Current: >150mA

Polarization: Positive Center

Output Plug Type: 2.5mm I.D. x 5.5mm O.D. x 12mm Female (P-6)

Example: Digi-Key (www.digikey.com) part number T309-P6P-ND (110V input), 5V DC power

Ethernet Cable:

Note: There are two types of Ethernet cable. For connection to a router or hub, use a standard "straight-through" Ethernet cable. For direct connection to an Ethernet port on the back of a PC, use a "crossover" Ethernet cable. A crossover cable is specially made for two-computer networking. These cables can be purchased from almost any computer or electronics store.

Example (straight-through): Radio Shack (www.radioshack.com) Cat 5E (3ft) Network Cable, part number 278-1763

Example (crossover): Radio Shack Cat 5E (3m) Crossover Cable, part number 278-2011

RS-232C Serial Cable (DB9 Male to DB9 Female):

This cable is straight-through, not a null-modem (crossover). These cables can be purchased from any computer or electronics store.
