

MAXIM

MAX5026 Evaluation Kit

General Description

The MAX5026 evaluation kit (EV kit) provides a +30V output voltage from a +3V to +11V input source. It delivers up to 6mA output current, depending on the input voltage. The MAX5026 is a constant-frequency, pulse-width-modulating (PWM), current-mode step-up voltage converter with an internal power switch that operates at 500kHz. This EV kit demonstrates the low-noise performance of the device.

The MAX5026 EV kit is a fully assembled and tested surface-mount circuit board. With modifications, this EV kit can also be used to evaluate MAX5025/MAX5027/MAX5028. The EV kit can be used to evaluate other output voltages by changing the feedback resistors.

Component List

DESIGNATION	QTY	DESCRIPTION
C1	1	4.7 μ F, 16V, X5R, 20% ceramic capacitor (1206) Taiyo Yuden EMK316BJ475ML
C2, C3	2	1 μ F, 50V, X7R, 10% ceramic capacitors (1210) Taiyo Yuden UMK325BJ105KH TDK C3225X7R1H105K Murata GRM42-2X7R105K050AD
C4, C5	0	Not installed, capacitor (1210)
L1	1	47 μ H \pm 20% power inductor Toko A915BY-470M Sumida CDRH4D28-470
D1	1	0.5A, 40V Schottky diode (SOT23) Zetex ZHCS500
R1	1	147k Ω \pm 1% resistor (0603)
R2	1	6.34k Ω \pm 1% resistor (0603)
R3	1	100 Ω \pm 5% resistor (0805)
U1	1	MAX5026EUT (6-Pin SOT23)
JU1	1	3-pin header (JU1)
J1	1	Oscilloscope jack
None	1	Shunt
None	1	MAX5026 PC board
None	1	MAX5026 EV kit data sheet
None	1	MAX5026 data sheet

Features

- ◆ +3V to +11V Input Voltage Range (MAX5026/MAX5028)
- ◆ +4.5V to +11V Input Voltage Range (MAX5025/MAX5027)
- ◆ Output Voltage:
Adjustable Output Voltage Up to +36V (MAX5025/MAX5026)
+30V Fixed Output Voltage (MAX5027/MAX5028)
- ◆ Low Switching Noise
- ◆ 500kHz Switching Frequency
- ◆ Less than 1mVp-p High-Frequency Output Switching Ripple at 2mA Load
- ◆ Up to 6mA Output Current with +5V Input
- ◆ 6-Pin SOT23 Package
- ◆ Surface-Mount Construction
- ◆ Fully Assembled and Tested

Quick Start

The MAX5026 EV kit is a fully assembled and tested surface-mount board. Follow the steps below to verify board operation. **Do not turn on the power supply until all connections are completed.**

Evaluating MAX5026

- 1) Verify that there is a shunt across JU1 (SHDN) pins 1 and 2.
- 2) Connect a voltmeter and load (if any) to the VOUT pad (and/or plug an oscilloscope probe into the oscilloscope jack).
- 3) Connect a +3V to +11V power supply to the VIN pad. Connect the power-supply ground to the GND pad closest to VIN.
- 4) Turn on the power supply and verify that the output voltage is approximately +30V.

To evaluate other output voltages, refer to the *Evaluating Other Output Voltages* section.

Detailed Description

Shutdown Function

The MAX5026 EV kit contains a boost converter. The circuit provides a +30V output with less than 2mVp-p high-frequency ripple from a +3V to +11V input voltage, and delivers up to 6mA. The setting of jumper JU1 selects the circuit operating modes. Table 1 shows the functions of jumper JU1.

Noise Performance

The MAX5026 EV kit is specifically designed for low-noise performance. An RC filter at the regulator's output reduces its noise further. To observe this filtered output, monitor the signal at oscilloscope jack J1. The high-frequency output ripple voltage is less than 1mVp-p at 2mA load current. Extra capacitor pads (C4 and C5) are provided for further noise reduction. To reduce low-frequency noise, add a 10 μ F electrolytic capacitor at

the pads labeled C5. Without the 10 μ F capacitor, the peak-to-peak low-frequency noise is about 20mV. The peak-to-peak low-frequency noise drops to 3mV when the 10 μ F capacitor is included.

Evaluating Other Output Voltages

The default output for the MAX5026 EV kit is +30V. To generate output voltages other than +30V with either the MAX5025EUT or MAX5026EUT, change feedback resistors R1 and R2. Limit the current through R1 and R2 to about 200 μ A. $R1 = R2 [(V_{OUT} / 1.25V) - 1]$.

Evaluating MAX5027/MAX5028

The MAX5026 EV kit can also be used to evaluate the MAX5027/MAX5028 boost converters with fixed +30V output. To evaluate MAX5027/MAX5028, remove the feedback resistors R1 and R2, short the two pads of R1, and replace the MAX5026EUT with a MAX5027EUT/MAX5028EUT.
