

SiGe High-Linearity, 1700MHz to 2200MHz Downconversion Mixer with LO Buffer/Switch

MAX9994

General Description

The MAX9994 high-linearity downconversion mixer provides 8.3dB gain, +26.2dBm IIP3, and 9.7dB NF for 1700MHz to 2200MHz UMTS/WCDMA, DCS, and PCS base-station receiver applications. With a 1400MHz to 2000MHz LO frequency range, this particular mixer is ideal for low-side LO injection receiver architectures. High-side LO injection is supported by the MAX9996*, which is pin-for-pin and functionally compatible with the MAX9994.

In addition to offering excellent linearity and noise performance, the MAX9994 also yields a high level of component integration. This device includes a double-balanced passive mixer core, an IF amplifier, a dual-input LO selectable switch, and an LO buffer. On-chip baluns are also integrated to allow for single-ended RF and LO inputs. The MAX9994 requires a nominal LO drive of 0dBm, and supply current is guaranteed to be below 235mA.

The MAX9994/MAX9996 are pin compatible with the MAX9984/MAX9986 815MHz to 995MHz mixers, making this entire family of downconverters ideal for applications where a common PC board layout is used for both frequency bands. The MAX9994 is also functionally compatible with the MAX9993.

The MAX9994 is available in a compact, 20-pin, thin QFN package (5mm x 5mm) with an exposed paddle. Electrical performance is guaranteed over the extended -40°C to +85°C temperature range.

Applications

UMTS/WCDMA Base Stations
DCS1800/PCS1900 EDGE Base Stations
cdmaOne™ and cdma2000® Base Stations
PHS/PAS Base Stations
Predistortion Receivers
Fixed Broadband Wireless Access
Wireless Local Loop
Private Mobile Radios
Military Systems
Microwave Links
Digital and Spread-Spectrum Communication Systems

cdma2000 is a registered trademark of Telecommunications Industry Association.

cdmaOne is a trademark of CDMA Development Group.

*Future product—contact factory for availability.

Features

- ◆ 1700MHz to 2200MHz RF Frequency Range
- ◆ 1400MHz to 2000MHz LO Frequency Range (MAX9994)
- ◆ 1900MHz to 2400MHz LO Frequency Range (MAX9996)
- ◆ 40MHz to 350MHz IF Frequency Range
- ◆ 8.3dB Conversion Gain
- ◆ +26.2dBm Input IP3
- ◆ +12.6dBm Input 1dB Compression Point
- ◆ 9.7dB Noise Figure
- ◆ 67dBc 2RF - 2LO Spurious Rejection at PRF = -10dBm
- ◆ Integrated LO Buffer
- ◆ Integrated RF and LO Baluns for Single-Ended Inputs
- ◆ Low -3dBm to +3dBm LO Drive
- ◆ Built-In SPDT LO Switch with 45dB LO1 to LO2 Isolation and 50ns Switching Time
- ◆ Pin Compatible with MAX9984/MAX9986 815MHz to 995MHz Mixers
- ◆ Functionally Compatible with MAX9993
- ◆ External Current-Setting Resistors Provide Option for Operating Mixer in Reduced Power/Reduced Performance Mode
- ◆ Lead-Free Package Available

Pin Description

PIN	NAME	FUNCTION
1, 6, 8, 14	V _{CC}	Power-Supply Connection. Bypass each V _{CC} pin to GND with capacitors as shown in the <i>Typical Application Circuit</i> .
2	RF	Single-Ended 50Ω RF Input. This port is internally matched and DC shorted to GND through a balun. Requires an external DC-blocking capacitor.
3	TAP	Center Tap of the Internal RF Balun. Bypass to GND with capacitors close to the IC, as shown in the <i>Typical Application Circuit</i> .
4, 5, 10, 12, 13, 17	GND	Ground
7	LOBIAS	Bias Resistor for Internal LO Buffer. Connect a 549Ω ±1% resistor from LOBIAS to the power supply.
9	LOSEL	Local Oscillator Select. Logic control input for selecting LO1 or LO2.
11	LO1	Local Oscillator Input 1. Drive LOSEL low to select LO1.
15	LO2	Local Oscillator Input 2. Drive LOSEL high to select LO2.
16	LEXT	External Inductor Connection. Connect a low-ESR, 10nH inductor from LEXT to GND. This inductor carries approximately 100mA DC current.
18, 19	IF-, IF+	Differential IF Outputs. Each output requires external bias to V _{CC} through an RF choke (see the <i>Typical Application Circuit</i>).
20	IFBIAS	IF Bias Resistor Connection for IF Amplifier. Connect an 806Ω resistor from IFBIAS to GND.
EP	GND	Exposed Ground Paddle. Solder the exposed paddle to the ground plane using multiple vias.

Detailed Description

The MAX9994 high-linearity downconversion mixer provides 8.3dB of conversion gain and 26.2dBm of IIP3, with a typical 9.7dB noise figure. The integrated baluns and matching circuitry allow for 50Ω single-ended interfaces to the RF and the two LO ports. A single-pole, double-throw (SPDT) switch provides 50ns switching time between the two LO inputs with 45dB of LO-to-LO isolation. Furthermore, the integrated LO buffer provides a high drive level to the mixer core, reducing the LO drive required at the MAX9994's inputs to a range of -3dBm to +3dBm. The IF port incorporates a differential output, which is ideal for providing enhanced IIP2 performance.

Specifications are guaranteed over broad frequency ranges to allow for use in UMTS, cdma2000, and 2G/2.5G/3G DCS1800 and PCS1900 base stations. The MAX9994 is specified to operate over a 1700MHz to 2200MHz RF frequency range, a 1400MHz to 2000MHz LO frequency range, and a 40MHz to 350MHz IF frequency range. Operation beyond these ranges is possible; see the *Typical Operating Characteristics* for additional details.

This device can operate in high-side LO injection applications with an extended LO range, but performance degrades as f_{LO} continues to increase. See the *Typical Operating Characteristics* for measurements taken with f_{LO} up to 2200MHz. The MAX9996—a variant of the MAX9994—provides better high-side performance since it is tuned for a higher LO range of 1900MHz to 2400MHz. Contact the factory for details. As a result of these higher LO frequencies, the MAX9996 may also be a better choice for extending the RF frequency range beyond 2200MHz.

RF Input and Balun

The MAX9994 RF input is internally matched to 50Ω, requiring no external matching components. A DC-blocking capacitor is required because the input is internally DC shorted to ground through the on-chip balun. Input return loss is typically 21dB over the entire 1700MHz to 2200MHz RF frequency range.

LO Inputs, Buffer, and Balun

The MAX9994 can be used for either high-side or low-side injection applications with a 1400MHz to 2000MHz LO frequency range. For a device with a 1900MHz to 2400MHz LO frequency range, refer to the MAX9996

SiGe High-Linearity, 1700MHz to 2200MHz Downconversion Mixer with LO Buffer/Switch

MAX9994

data sheet. As an added feature, the MAX9994 includes an internal LO SPDT switch that can be used for frequency-hopping applications. The switch selects one of the two single-ended LO ports, allowing the external oscillator to settle on a particular frequency before it is switched in. LO switching time is typically less than 50ns, which is more than adequate for virtually all GSM applications. If frequency hopping is not employed, set the switch to either of the LO inputs. The switch is controlled by a digital input (LOSEL): logic-high selects LO2, logic-low selects LO1. LO1 and LO2 inputs are internally matched to 50Ω, requiring only a 22pF DC blocking capacitor.

A two-stage internal LO buffer allows a wide input power range for the LO drive. All guaranteed specifications are for an LO signal power from -3dBm to +3dBm. The on-chip low-loss balun, along with an LO buffer, drives the double-balanced mixer. All interfacing and matching components from the LO inputs to the IF outputs are integrated on-chip.

High-Linearity Mixer

The core of the MAX9994 is a double-balanced, high-performance passive mixer. Exceptional linearity is provided by the large LO swing from the on-chip LO buffer. When combined with the integrated IF amplifiers, the cascaded IIP3, 2RF - 2LO rejection, and NF performance is typically 26.2dBm, 67dBc, and 9.7dB, respectively.

Differential IF Output Amplifier

The MAX9994 mixer has a 40MHz to 350MHz IF frequency range. The differential, open-collector IF output ports require external pullup inductors to V_{CC}. Note that these differential outputs are ideal for providing enhanced 2RF - 2LO rejection performance. Single-ended IF applications require a 4:1 balun to transform the 200Ω differential output impedance to a 50Ω single-ended output. After the balun, the IF return loss is better than 15dB.

Applications Information

Input and Output Matching

The RF and LO inputs are internally matched to 50Ω. No matching components are required. Return loss at the RF port is typically 21dB over the entire input range (1700MHz to 2200MHz) and return loss at the LO ports are typically better than 14dB (1400MHz to 2000MHz).

RF and LO inputs require only DC-blocking capacitors for interfacing.

The IF output impedance is 200Ω (differential). For evaluation, an external low-loss 4:1 (impedance ratio) balun transforms this impedance down to a 50Ω single-ended output (see the *Typical Application Circuit*).

Bias Resistors

Bias currents for the LO buffer and the IF amplifier are optimized by fine tuning resistors R1 and R2. If reduced current is required at the expense of performance, contact the factory for details. If the ±1% bias resistor values are not readily available, substitute standard ±5% values.

LEXT Inductor

LEXT serves to improve the LO-to-IF and RF-to-IF leakage. The inductance value can be adjusted by the user to optimize the performance for a particular frequency band. Since approximately 100mA flows through this inductor, it is important to use a low DCR wire-wound coil.

If the LO-to-IF and RF-to-IF leakage are not critical parameters, the inductor can be replaced by a short circuit to ground.

Layout Considerations

A properly designed PC board is an essential part of any RF/microwave circuit. Keep RF signal lines as short as possible to reduce losses, radiation, and inductance. For the best performance, route the ground pin traces directly to the exposed pad under the package. The PC board exposed pad **MUST** be connected to the ground plane of the PC board. It is suggested that multiple vias be used to connect this pad to the lower level ground planes. This method provides a good RF/thermal conduction path for the device. Solder the exposed pad on the bottom of the device package to the PC board. The MAX9994 Evaluation Kit can be used as a reference for board layout. Gerber files are available upon request at www.maxim-ic.com.

Power-Supply Bypassing

Proper voltage-supply bypassing is essential for high-frequency circuit stability. Bypass each V_{CC} pin and TAP with the capacitors shown in the *Typical Application Circuit*; see Table 1. Place the TAP bypass capacitor to ground within 100 mils of the TAP pin.

SiGe High-Linearity, 1700MHz to 2200MHz Downconversion Mixer with LO Buffer/Switch

Exposed Pad RF/Thermal Considerations

The exposed paddle (EP) of the MAX9994's 20-pin thin QFN-EP package provides a low thermal-resistance path to the die. It is important that the PC board on which the MAX9994 is mounted be designed to conduct heat from the EP. In addition, provide the EP with a low-inductance path to electrical ground. The EP **MUST**

be soldered to a ground plane on the PC board, either directly or through an array of plated via holes.

DALLAS SEMICONDUCTOR **MAXIM**

TITLE: PACKAGE OUTLINE
16, 20, 28, 32L THIN QFN, 5x5x0.8mm

APPROVAL: _____ DOCUMENT CONTROL NO. 21-0140 REV. F 2/2

- NOTES:
- DIMENSIONING & TOLERANCING CONFORM TO ASME Y14.5M-1994.
 - ALL DIMENSIONS ARE IN MILLIMETERS, ANGLES ARE IN DEGREES.
 - N IS THE TOTAL NUMBER OF TERMINALS.
 - THE TERMINAL #1 IDENTIFIER AND TERMINAL NUMBERING CONVENTION SHALL CONFORM TO JEDEC 95-1 SPP-012. DETAILS OF TERMINAL #1 IDENTIFIER ARE OPTIONAL, BUT MUST BE LOCATED WITHIN THE ZONE INDICATED. THE TERMINAL #1 IDENTIFIER MAY BE EITHER A MOLD OR MARKED FEATURE.
 - DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.25 mm AND 0.30 mm FROM TERMINAL TIP.
 - ND AND NE REFER TO THE NUMBER OF TERMINALS ON EACH D AND E SIDE RESPECTIVELY.
 - DEPOPULATION IS POSSIBLE IN A SYMMETRICAL FASHION.
 - COPLANARITY APPLIES TO THE EXPOSED HEAT SINK SLUG AS WELL AS THE TERMINALS.
 - DRAWING CONFORMS TO JEDEC MO220, EXCEPT EXPOSED PAD DIMENSION FOR T2855-1, T2855-3 AND T2855-6.
 - WARPAGE SHALL NOT EXCEED 0.10 mm.
 - MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.
 - NUMBER OF LEADS SHOWN ARE FOR REFERENCE ONLY.
- DRAWING NOT TO SCALE-

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time.
