## 34-Channel Symmetric Row Driver

## Features

- HVCMOS ${ }^{\circledR}$ technology
- Symmetric row drive (reduces latent imaging in ACTFEL displays)
- Output voltage up to +230 V
- Low power level shifting
- Source/sink current minimum 70mA
- Shift register speed 4.0 MHz
- Pin-programmable shift direction

## General Description

The HV7022C is a low-voltage serial to high-voltage parallel converter with push-pull outputs. It is especially suited for use as a symmetric row driver in AC thin-film electroluminescent (ACTFEL) displays. The HV7022C offers 34 output lines, a direction (DIR) pin to give CW or CCW shift register loading, output enable (OE), and polarity (POL) control. After data is entered (on the falling edge of CLK), a logic high will cause the output to swing to VPP if POL is high, or to GND if POL is low.

## Absolute Maximum Ratings

| Parameter | Value |
| :---: | :---: |
| Supply voltage, $\mathrm{V}_{\mathrm{DD}}$ | -0.3 V to +15 V |
| Supply voltage, $\mathrm{V}_{\mathrm{PP}}$ | -0.3V to +250 V |
| Logic input levels | -0.3 V to $\mathrm{V}_{\mathrm{DD}}+0.3 \mathrm{~V}$ |
| Ground current ${ }^{1}$ | 1.5A |
| Continuous total power dissipation ${ }^{2}$ <br> Plastic <br> Ceramic | $\begin{aligned} & 1200 \mathrm{~mW} \\ & 1500 \mathrm{~mW} \end{aligned}$ |
| Operating temperature range Plastic Ceramic | $\begin{array}{r} -40^{\circ} \mathrm{C} \text { to }+85^{\circ} \mathrm{C} \\ -55^{\circ} \mathrm{C} \text { to }+125^{\circ} \mathrm{C} \end{array}$ |
| Storage temperature range | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

## Notes:

1. Duty cycle is limited by the total power dissipated in the package.
2. For operation above $25^{\circ} \mathrm{C}$ ambient derate linearly to maximum operating temperature at $25 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ for plastic and at $15 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ for ceramic.
