## 2.45 GHz power amplifier with the BFG480W

---

### ABSTRACT

- Description of the product

The BFG480W, one of the Philips double polysilicon wideband transistors of the BFG400 series. These transistors are characterised by a transition frequency higher than 20 GHz at low supply voltages.

- Application area

Low voltage high frequency wireless applications.

- Presented application

A power amplifier for a 2.45 GHz WLAN.

- Main results

At a frequency of 2.45 GHz, a supply voltage of 3.0 V, and a control voltage of 3.0 V, the amplifier delivers an output power of 19 dBm at an input power of 8 dBm, with a power added efficiency of 38 %.

## 2.45 GHz power amplifier with the BFG480W

### INTRODUCTION

With the Philips double polysilicon wideband transistor BFG480W, it is possible to design Power Amplifiers (PAs) for high frequency applications with a low current and a low supply voltage. The transistors have a transition frequency higher than 20 GHz at low supply voltages. This application note gives an example of a power amplifier with the BFG480W for a frequency of 2.45 GHz for a Wireless Local Area Network (WLAN).

### PERFORMANCE OVERVIEW

The measurements on the amplifier in the Continuous Wave (CW) mode of operation have been done under the following conditions:

- $V_{\text{supply}} = 3.0 \text{ V}$
- $V_{\text{crt1}} = 3.0 \text{ V}$
- $I_{\text{supply}} = 64 \text{ mA}$
- $P_i = 8 \text{ dBm}$
- $f = 2.45 \text{ GHz}$
- $Z_i = 50 \text{ } \Omega$ ;  $Z_o = 50 \text{ } \Omega$ .

**Table 1** Measuring results of the PA (CW mode of operation)

SYMBOL	PARAMETER	CONDITIONS	VALUE	UNIT
$P_o$	output power		19	dBm
$G_P$	power gain		11	dB
$\eta_{PA}$	power added efficiency	note 1	38	%
$\eta_{\text{tot}}$	total efficiency	note 2	41	%
$V_{\text{SWR}_{IN}}$	input voltage standing wave ratio		2	

### Notes

1. The power added efficiency is defined as  $\eta_{PA} = \frac{P_o - P_i}{V_{\text{supply}} \times I_{\text{supply}}} \times 100\%$ .
2. The total efficiency is defined as  $\eta_{\text{tot}} = \frac{P_o}{V_{\text{supply}} \times I_{\text{supply}}} \times 100\%$ .

## 2.45 GHz power amplifier with the BFG480W

### CIRCUIT DESCRIPTION

The power amplifier operates at a single supply voltage of 3.0 V. It consists of the BFG480W wideband transistor, operating in class AB. Biasing for load power adjustment is performed by an external control voltage and a circuit with an NPN transistor BC817. The BFG480W has two emitter-leads which have to be carefully grounded to ensure stable operation and performance according to the specification. The PCB layout (see Fig.2) of the amplifier results in an emitter-to-ground inductance of 130 pH (typical value).

### COMPONENT LIST

**Table 2** Component list for the 2.45 GHz PA

COMPONENT	VALUE	UNIT	SIZE, MANUFACTURER	PURPOSE, COMMENT
TR1	BFG480W		SOT343R Philips	RF transistor
TR2	BC817		SOT23 Philips	NPN bias transistor
R1	680	$\Omega$	0.4 W metal film resistor	
R2	10	$\Omega$	0.4 W metal film resistor	
R3	5	$\Omega$	0.4 W metal film resistor	
C1	6.8	pF	type 100A; see note 1	
C2	2.2	pF	type 100A; see note 1	
C3	6.8	pF	type 100A; see note 1	
C4	1.2	pF	type 100A; see note 1	
C5	6.8	pF	type 100A; see note 1	
C6	6.8	pF	type 100A; see note 1	
C7	4.7	nF	type 100A; see note 1	
L1	4S2			ferroxcube chip bead
$\mu$ S1	–		L = 18 mm; W = 0.25 mm	micro stripline; $Z_0 \approx 100 \Omega$
$\mu$ S2	–		L = 18 mm; W = 0.25 mm	micro stripline; $Z_0 \approx 50 \Omega$
$\mu$ S3	–		L = 18 mm; W = 0.25 mm	micro stripline; $Z_0 \approx 50 \Omega$
$\mu$ S4	–		L = 18 mm; W = 0.25 mm	micro stripline; $Z_0 \approx 100 \Omega$
PCB	–			$\epsilon_r \approx 6.15$ ; d = 0.64 mm

### Note

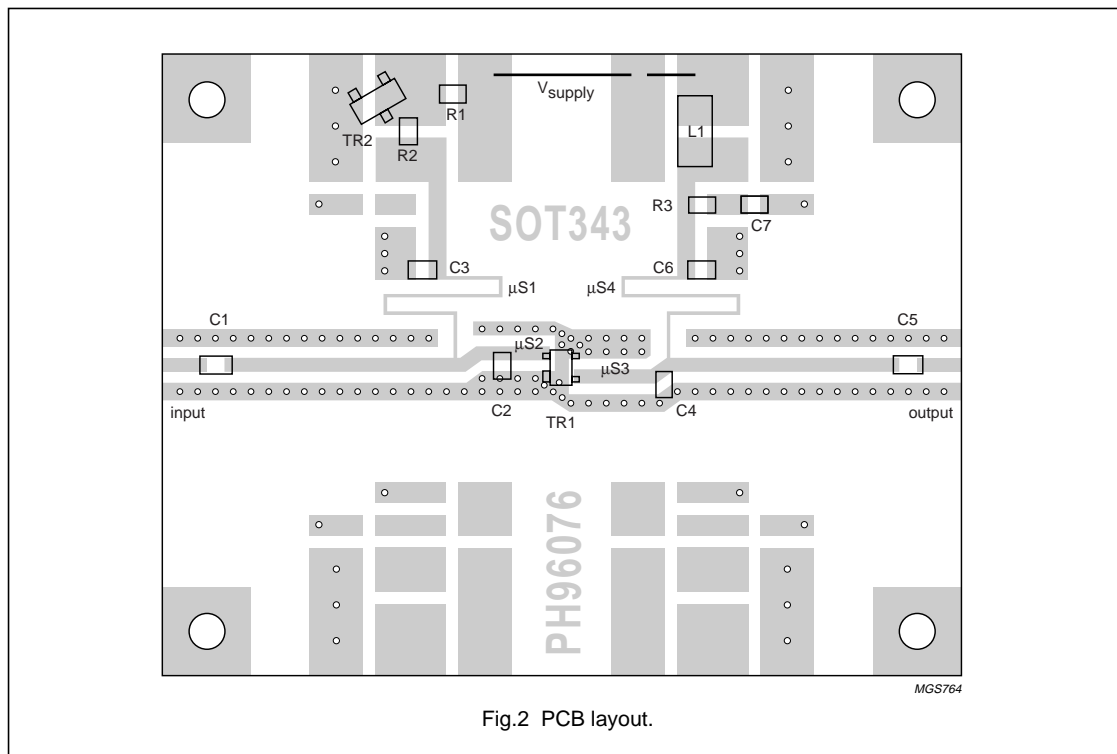

1. Multilayer ceramic chip capacitor; American Technical Ceramics or a capacitor of the same quality.

### BOARD LAYOUT

The double copper-clad PTFE fibre-glass dielectric printed-circuit board has the following specification:

- $d = 0.64$  mm
- $t = 35$   $\mu\text{m}$  (copper cladding thickness)
- $\epsilon_r = 6.15$
- $\tan \delta = 0.0019$
- Dimensions  $35 \times 45$  mm.

## 2.45 GHz power amplifier with the BFG480W

### MEASUREMENTS

The measurements in the CW mode of operation have been done under the following conditions:

- Supply voltage 3.0 V
- Control voltage 3.0 V
- Quiescent current 1 mA
- Frequency 2.45 GHz.

The output is optimized for an output level of 19 dBm.

**Table 3** Measuring results of the 2.45 GHz power amplifier

$P_i$ (dBm)	$P_o$ (dBm)	$G_P$ (dB)	$I_{supply}$ (mA)	$\eta_{PA}$ (%)	$\eta_{tot}$ (%)
