### Functional Description

The CM1442-06LP is part of a family of pi-style EMI filter arrays with ESD protection, which integrates six filters (C-R-C) in a Chip Scale Package (CSP) form factor with 0.40mm pitch. The CM1442-06LP (low profile) has component values of 15pF-100 $\Omega$ -15pF per channel. The CM1442-06LP has a cut-off frequency of 120MHz and can be used in applications where the data rates are as high as 48Mbps. The parts include avalanche-type ESD diodes on every pin, which provide a very high level of protection for sensitive electronic components against potential electrostatic discharge (ESD). The ESD protection diodes safely dissipate ESD strikes of  $\pm 15\text{kV}$ , well beyond the maximum requirement of the IEC61000-4-2 international standard. Using the MIL-STD-883 (Method 3015) specification for Human Body Model (HBM) ESD, the pins are protected for contact discharges at greater than  $\pm 30\text{kV}$ .

The CM1442-06LP is available in a space-saving, low-profile CSP with RoHS-compliant, lead-free finishing. It is manufactured with a 0.40mm pitch and 0.15mm CSP solder ball to provide up to 28% board space saving versus competing CSP devices with 0.50mm pitch and 0.30mm CSP solder ball.
