

HDMI Receiver Port Protection and Interface Device

CM2021-02TR

Features

- HDMI 1.3 compliant
- 0.05pF matching capacitance between the TMDS intra-pair
- Level shifting/isolation circuitry
- Provides ESD protection to IEC61000-4-2 Level 4:
 - ±8kV contact discharge
 - ±15kV air discharge
- Matched 0.5mm trace spacing (TSSOP)
- Simplified layout for HDMI connectors
- Backdrive protection
- RoHS-compliant, lead-free packaging

Applications

- PC
- · Consumer electronics
- · Displays and digital television

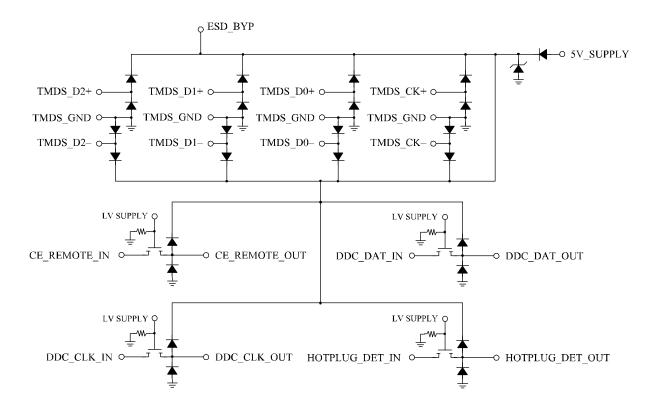

Product Description

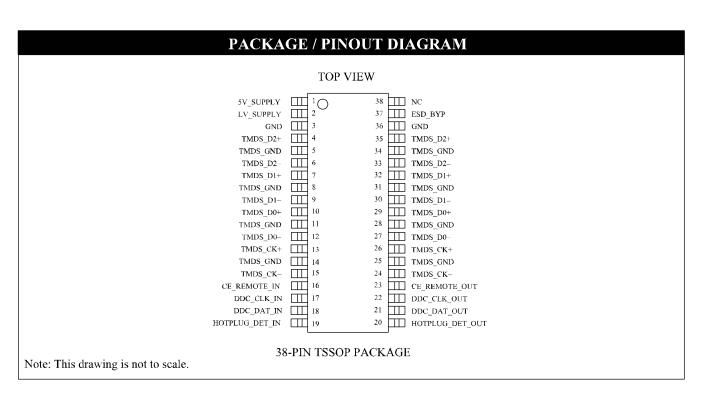

The CM2021-02TR HDMI Receiver Port Protection and Interface Device is specifically designed for next generation HDMI Host interface protection.

An integrated package provides all ESD, level shift and backdrive protection for an HDMI port in a single 38-Pin TSSOP package.

The CM2021-02TR part is specifically designed to complement the CM2020 protection part in HDMI transmitters (DVD, STB/OPVR, etc.).

Electrical Schematic

	PIN DESCRIPTIONS						
PINS	NAME	ESD Level	DESCRIPTION				
4, 35	TMDS_D2+	8kV ²	TMDS 0.9pF ESD protection. ¹				
6, 33	TMDS_D2-	8kV ²	TMDS 0.9pF ESD protection.1				
7, 32	TMDS_D1+	8kV ²	TMDS 0.9pF ESD protection. ¹				
9, 30	TMDS_D1-	8kV²	TMDS 0.9pF ESD protection.1				
10, 29	TMDS_D0+	8kV²	TMDS 0.9pF ESD protection. ¹				
12, 27	TMDS_D0-	8kV²	TMDS 0.9pF ESD protection. ¹				
13, 26	TMDS_CK+	8kV²	TMDS 0.9pF ESD protection.1				
15, 24	TMDS_CK-	8kV²	TMDS 0.9pF ESD protection.1				
16	CE_REMOTE_IN	2kV³	LV_SUPPLY referenced logic level into ASIC.				
23	CE_REMOTE_OUT	8kV ²	5V_SUPPLY referenced logic level out plus 3.5pF ESD to connector.				
17	DDC_CLK_IN	2kV³	LV_SUPPLY referenced logic level into ASIC.				
22	DDC_CLK_OUT	8kV ²	5V_SUPPLY referenced logic level out plus 3.5pF ESD to connector.				
18	DDC_DAT_IN	2kV³	LV_SUPPLY referenced logic level into ASIC.				
21	DDC_DAT_OUT	8kV²	5V_SUPPLY referenced logic level out plus 3.5pF ESD to connector.				
19	HOTPLUG_DET_IN	2kV ³	LV_SUPPLY referenced logic level into ASIC.				
20	HOTPLUG_DET_OUT	8kV²	5V_SUPPLY referenced logic level out plus 3.5pF ESD to connector.				
2	LV_SUPPLY	2kV³	Bias for CE / DDC / HOTPLUG level shifters.				
1	5V_SUPPLY	2kV³	Current source for 5V_OUT.				
37	ESD_BYP	2kV³	This pin may be connected to a 0.1 F ceramic capacitor, but it is not necessary.				
5, 34, 8, 31, 11, 28, 14, 25	TMDS_GND	N/A	TMDS ESD and Parasitic GND return.⁴				
3, 36	GND	N/A	Supply GND reference.				
38	NC	N/A	No connect.				

Note 1: These 2 pins need to be connected together in-line on the PCB.

Note 2: Standard IEC 61000-4-2, $C_{\text{DISCHARGE}}$ =150pF, $R_{\text{DISCHARGE}}$ =330 Ω , 5V_SUPPLY and LV_SUPPLY within recommended operating conditions, GND=0V, each bypassed with a 0.1 μ F ceramic capacitor connected to GND.

Note 3: Human Body Model per MIL-STD-883, Method 3015, $C_{\tiny DISCHARGE}$ =100pF, $R_{\tiny DISCHARGE}$ =1.5k Ω , 5V_SUPPLY and LV_SUPPLY within recommended operating conditions, GND=0V, and each bypassed with a 0.1 μ F ceramic capacitor connected to GND.

Note 4: These pins should be routed directly to the associated GND pins on the HDMI connector with single point ground vias at the connector

Backdrive Protection

Two scenarios below describe what can happen when a powered device is connected to an unpowered device via an HDMI interface, substantiating the need for backdrive protection for this type of interface.

In a classic scenario, a DVD player is connected to a TV via an HDMI interface. If the DVD player is switched off and the TV is left on, there is a possibility of reverse current flow back into the main power supply rail of the DVD player. Typically, the DVD's power supply has some form of bulk supply capacitance associated with it. Because all CMOS logic exhibits a very high impedance on the power rail node when "off," if there is very little parasitic shunt resistance and as little as a few milliamps of "backdrive" current flowing back into the power rail, it is possible over time to charge that bulk supply capacitance to some intermediate level. If this level rises above the power-on-reset (POR) voltage level of some of the integrated circuits in the DVD player, these devices may not reset properly when the DVD player is turned back on.

In a more serious scenario, if any SOC devices are incorporated in the design which have built-in level shifter and DRC diodes for ESD protection, there is even a higher risk for damage. In this case, if there is a pullup resistor (such as with DDC) on the other end of the cable, that resistance will pull the SOC chips "output" up to a high level. This will forward bias the upper ESD diode in the DRC and charge the bulk capacitance in a similar fashion like above. If the current flow is high enough, even as little as a few milliamps, it could destroy one of the SOC chip's internal DRC diodes, as they are not designed for passing DC.

To avoid either of these situations, the CM2021-02TR is designed to block backdrive current, guaranteeing no more than 5μ A on any I/O pin when the I/O pin voltage is greater than the CM2021-02TR supply voltage.

Application Information

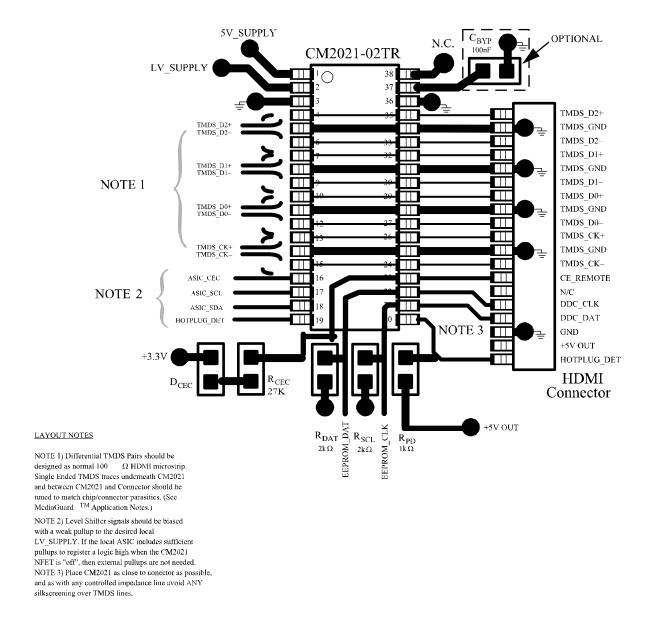

Figure 3. Typical Application for CM2021-02TR

Application Information

Design Considerations

1. DUT On vs. DUT Off

Many HDMI CTS tests require a power off condition on the System Under Test. Many Dual Rail Clamp (DRC) ESD diode configurations will be forward biased when their VDD rail is lower than the I/O pin bias, thereby exhibiting extremely high apparent capacitance measurements, for example. The *MediaGuard* backdrive isolation circuitry limits this current to less than 10 A, and will help ensure HDMI compliance.

2. **EEPROM Configurations**

The EDID EEPROM may be connected to either the ASIC LV domain or Connector 5V domain of the CM2021. See the MediaGuard EEPROM Application Note for further circuit connection and layout examples.
