Output Clock Selection Example

The P2084A can generate 4x from the input reference frequency. P2084A's internal crystal oscillator circuits allow the use of an inexpensive crystal or resonator to replace expensive can oscillators that are used in networking, PC peripherals, xDSL, and consumer

applications for high frequency generation. Its input frequency range is optimized for operation from 3MHz to 78MHz, and its output frequency can deliver up to 312MHz.
