## **QUALITY ASSURED**

Our quality system focuses on the continuing high quality of our components and the best possible service for our customers. We have a three-sided quality strategy: we apply a system of total quality control and assurance; we operate customer-oriented dynamic improvement programmes; and we promote a partnering relationship with our customers and suppliers.

## **PRODUCT SAFETY**

In striving for state-of-the-art perfection, we continuously improve components and processes with respect to environmental demands. Our components offer no hazard to the environment in normal use when operated or stored within the limits specified in the data sheet.

Some components unavoidably contain substances that, if exposed by accident or misuse, are potentially hazardous to health. Users of these components are informed of the danger by warning notices in the data sheets supporting the components. Where necessary the warning notices also indicate safety precautions to be taken and disposal instructions to be followed. Obviously users of these components, in general the set-making industry, assume responsibility towards the consumer with respect to safety matters and environmental demands.

All used or obsolete components should be disposed of according to the regulations applying at the disposal location. Depending on the location, electronic components are considered to be 'chemical', 'special' or sometimes 'industrial' waste. Disposal as domestic waste is usually not permitted.

## **LIFE SUPPORT APPLICATIONS**

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.

## **INTRODUCTION**

## Ceramic capacitors

## Introduction

### GENERAL DATA

Ceramic capacitors are widely used in electronic circuitry for coupling, decoupling and in filters. These different functions require specific capacitor properties.

Ceramic capacitors can be divided into two classes:

- Class 1

In these capacitors dielectric materials are used which have a very high specific resistance, very good Q and linear temperature dependence ( $\epsilon_r$  from 6 up to 550). They are used in such applications as oscillators and filters where low losses, capacitance drift compensation and high stability are required.

- Class 2

These capacitors have higher losses and have non-linear characteristics ( $\epsilon_r > 250$ ). They are used for coupling and decoupling.

### CONSTRUCTION

The capacitance of a ceramic capacitor depends on the area of the electrodes (A), the thickness of the ceramic dielectric (t) and the dielectric constant of the ceramic material ( $\epsilon_r$ ); and on the number of dielectric layers (n) with multilayer ceramic capacitors:

$$C = \epsilon_r \times \epsilon_0 \times \frac{A}{t} \times n$$

The rated voltage is dependent on the dielectric strength, which is mainly governed by the thickness of the dielectric layer and the ceramic structure. For this reason a reduction of the layer thickness is limited.

### MANUFACTURING OF CERAMIC CAPACITORS

The raw materials are finely milled and carefully mixed. Thereafter the powders are calcined at temperatures between 1100 and 1300 °C to achieve the required chemical composition. The resultant mass is reground and dopes and/or sintering means are added.

The finely ground material is mixed with a solvent and binding matter. Thin sheets are obtained by casting or rolling.

For plate capacitors these sheets are fired in a carefully controlled atmosphere at temperatures between 1200 and 1400 °C.

For multilayer capacitors electrode material is printed on the sheets and after stacking and pressing of the sheets cofired with the ceramic compact at temperatures between 1000 and 1400 °C.

The totally enclosed electrodes of a multilayer capacitor guarantee good life test behaviour as well.

### EQUIVALENT CIRCUIT FOR CERAMIC CAPACITORS

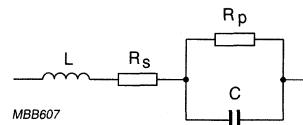

Fig.1 Equivalent circuit.

### Definition of symbols; see Fig.1

SYMBOL	DESCRIPTION
C	Capacitance between the two electrodes, plus the stray capacitance at the edges and between the leads.
R <sub>p</sub>	Resistance of insulation and dielectric. Generally R <sub>p</sub> is very high, and of decreasing importance with increasing frequency. R <sub>p</sub> also represents the polarization losses of the material in an alternating electric field.
R <sub>s</sub>	Losses in the leads, the electrodes and the contacts. Up to several hundreds of MHz the current penetration depth is greater than the conductor thickness so that no skin-effect occurs. For ceramic capacitors R <sub>s</sub> is extremely low.
L	Inductance of the leads and the internal inductance of the capacitor; the latter, however, is almost negligible. The inductance is only important in high frequency applications, since the capacitor will act as an inductance when the frequency is higher than its resonance frequency.

## Ceramic capacitors

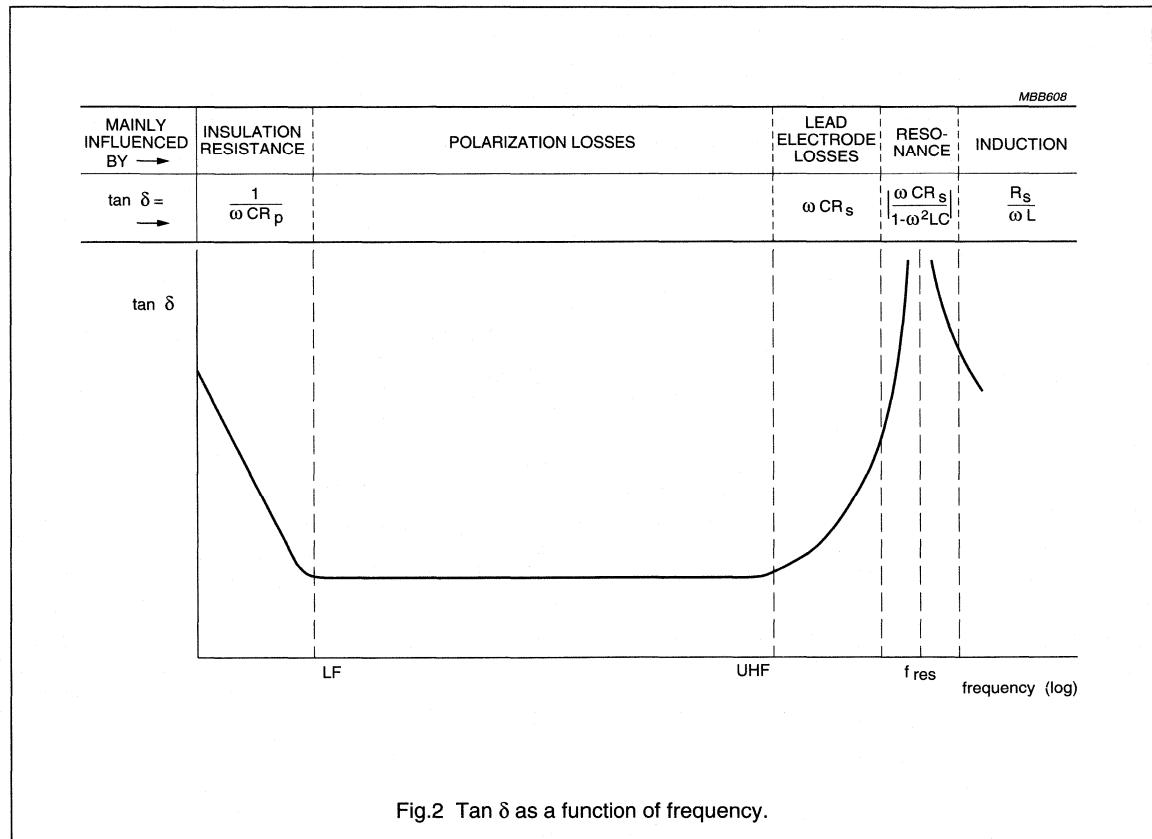

## Introduction

## TANGENT OF THE LOSS ANGLE

The losses of a capacitor are expressed in terms of  $\tan \delta$  which is the relationship between the resistive and reactive parts of the impedance, specified as follows:

$$\tan \delta = \frac{|R|}{|X|} = \frac{R_p + R_s \{1 + (\omega C R_p)^2\}}{(\omega C R_p)^2 - \omega L \{1 + (\omega C R_p)^2\}}$$

From this formula,  $\tan \delta$  can be derived for different frequency ranges as shown in Fig.2.

## **PRODUCT DATA**

**Ceramic disc capacitors****Class 1 and 2, 50 V (DC)  
general purpose****FEATURES**

- Low losses
- High stability
- High capacitance in small size
- Kinked (preferred) or straight leads.

**APPLICATIONS**

- Bypassing
- Coupling
- Resonant circuit.

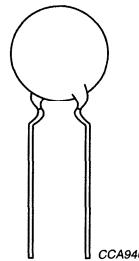

**DESCRIPTION**

The capacitors consist of a ceramic disc both sides of which are silver-plated. Connection leads are made of tinned copper having a diameter of 0.6 mm.

The capacitors have inward kinked leads with a spacing of 5 mm (0.200") and a lead length from 4 to 30 mm. Encapsulation is made of phenolic resin.

**Ceramic disc capacitors****Class 1 and 2, 500 V (DC)  
general purpose****FEATURES**

- Low losses
- High stability
- High capacitance in small size
- Kinked (preferred) or straight leads.

**APPLICATIONS**

- Bypassing
- Coupling
- Resonant circuit.

**DESCRIPTION**

The capacitors consist of a ceramic disc both sides of which are silver-plated. Connection leads are made of tinned copper having a diameter of 0.6 mm.

The capacitors have inward kinked leads with a spacing of 5 mm (0.200") or 7.5 mm (0.300") and a lead length from 4 to 30 mm. Encapsulation is made of phenolic resin.

## Ceramic disc capacitors

## Class 1 and 2, 1/2/3/6 kV general purpose

### FEATURES

- Low losses
- High stability
- High capacitance in small size
- Kinked (preferred), flanged or straight leads.

### APPLICATIONS

- DC high voltage
- Pulse high voltage
- SMPS
- HV power supply
- HF ballast.

### DESCRIPTION

The capacitors consist of a ceramic disc both sides of which are silver-plated. Connection leads are made of tinned copper having a diameter of 0.6 mm or 0.8 mm up to 3 kV and 0.8 mm for 6 kV.

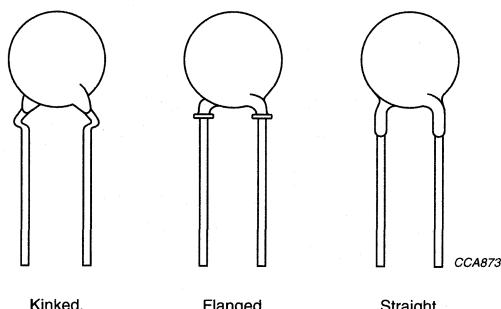

The capacitors may be supplied with outward kinked, flanged or straight leads with a lead spacing of 5 mm (0.200"), 7.5 mm (0.300") or 10 mm (0.400") and a lead length from 4 to 30 mm. The standard tolerance on capacitance is  $\pm 5\%$  or  $\pm 10\%$  for class 1 capacitors and  $\pm 10\%$  or  $\pm 20\%$  for class 2 capacitors. Encapsulation is made of gold-coloured epoxy-resin, flammable resistant in accordance with "UL94V-0".

**MARKING**

Flanged capacitors are marked as follows:

- The body of the capacitors is tan coloured; capacitance value and voltage are indicated by a marking code on the body.
- SL capacitors do not have the temperature coefficient indication on the body.
- The temperature dependency is indicated by a yellow or a blue coloured cap, respectively for Y5P and Z5U dielectrics.

Straight and kinked leaded versions are gold coloured.

Marking indicates capacitance value and tolerance in accordance with "EIA198", and voltage.

## Ceramic disc capacitors

**Class 2, low loss (0.5% max.)  
1 kV, 2 kV and 3 kV**

### FEATURES

- High reliability
- Low losses
- High capacitance in small size
- Kinked (preferred) or straight leads.

### APPLICATIONS

In electronic circuits where low losses and high capacitance per volume are essential, for example:

- SMPS
- HF ballast
- Snubber and high voltage circuits.

### DESCRIPTION

The capacitors consist of a ceramic disc both sides of which are silver-plated. Connection leads are made of tinned copper having a diameter of 0.6 mm or 0.8 mm.

The capacitors may be supplied with outward kinked or straight leads with a lead spacing of 5 mm (0.200"), 7.5 mm (0.300") or 10 mm (0.400") and a lead length from 4 to 30 mm. The standard tolerance on capacitance is  $\pm 10\%$ . Encapsulation is made of gold coloured epoxy-resin, flammable resistant in accordance with "UL94V-0".

### QUICK REFERENCE DATA

DESCRIPTION	VALUE
Capacitance range	100 to 4 700 pF
Rated DC voltage	1 kV; 2 kV; 3 kV
Dielectric strength	200% of rated voltage
Insulation resistance at 500 V (DC)	$\geq 10000 \text{ M}\Omega$
Tolerance on capacitance	$\pm 10\%$ ; note 1
Dissipation factor	0.5% max.
Temperature coefficient	Y5P
Sectional specifications	IEC 384-9, EIA198
Climatic category	30/085/21

### MARKING

Marking indicates capacitance value and tolerance in accordance with "EIA198" and voltage marks.

#### Examples of marking code

Disc size ( $D_{max}$ )  $\leq$  6.5 mm:

R101 = low loss 100 pF  
2 kV

Disc size ( $D_{max}$ )  $\geq$  7.5 mm:

R102 = low loss 1000 pF  
3 kV

## Ceramic disc capacitors

**FEATURES**

- High reliability
- Low losses
- High capacitance in small size
- Flanged leads.

**APPLICATIONS**

In electronic circuits where low losses and high capacitance per volume are essential, for example:

- SMPS
- HF ballast
- Snubber and high voltage circuits.

**Note**

1. Other tolerances available on request.

**DESCRIPTION**

The capacitors consist of a ceramic disc both sides of which are silver-plated. Connection leads are made of tinned copper having a diameter of 0.6 mm.

The capacitors have a lead spacing of 5 mm (0.20") and flanged leads. The flange guarantees that the leads are free of lacquer and its shape allows soldering gasses to escape freely, assuring excellent solder joints. This makes the capacitors suitable for both hand mounting and automatic insertion. Encapsulation is made of epoxy-resin, flammable resistant in accordance with "UL94V-0".

### MARKING

Flanged capacitors are marked as follows:

- The body of 1 kV capacitors is tan coloured. The temperature dependency is indicated by a yellow coloured cap.
- The body of 2 kV capacitors is black coloured with no indication of temperature dependency.
- The voltage is marked in clear letters, the low loss characteristics being indicated by the code 'L' marked below the capacitance value.
- Capacitance value is marked on the body in a 3-digit code: two numbers corresponding with the numerical capacitance value and one letter indicating the multiplier and the decimal point.

#### Example of marking code

n10 = 100 pF

1n5 = 1500 pF

## Class X1/Y2, 250 V (AC) safety (kinked or straight)

### FEATURES

- Complying with "EN 132 400" and "IEC 384-14, 2<sup>nd</sup> edition, including amendment 1.1995"
- High reliability
- Kinked (preferred) or straight leads.

### APPLICATIONS

- Across-the-line
- Line by-pass
- Antenna coupling.

### DESCRIPTION

The capacitors consist of a ceramic disc both sides of which are silver-plated. Connection leads are made of tinned copper having a diameter of 0.6 mm or 0.8 mm.

The capacitors may be supplied with kinked or straight leads having a lead spacing of 7.5 mm (0.300") or 10 mm (0.400") and a lead length from 4 to 30 mm. The standard tolerance on capacitance is  $\pm 10\%$  for Y5P material and  $\pm 20\%$  for Z5U material. Encapsulation is made of flammable resistant epoxy resin in accordance with "UL94V-0".

**Ceramic disc capacitors****Class Y2, 250 V (AC) safety  
(flanged)****ELECTRICAL CHARACTERISTICS**

The capacitors meet the essential requirements of "IEC 384-14, 2nd edition". Unless stated otherwise all electrical values apply at an ambient temperature of  $25 \pm 3$  °C, at normal atmospheric conditions.

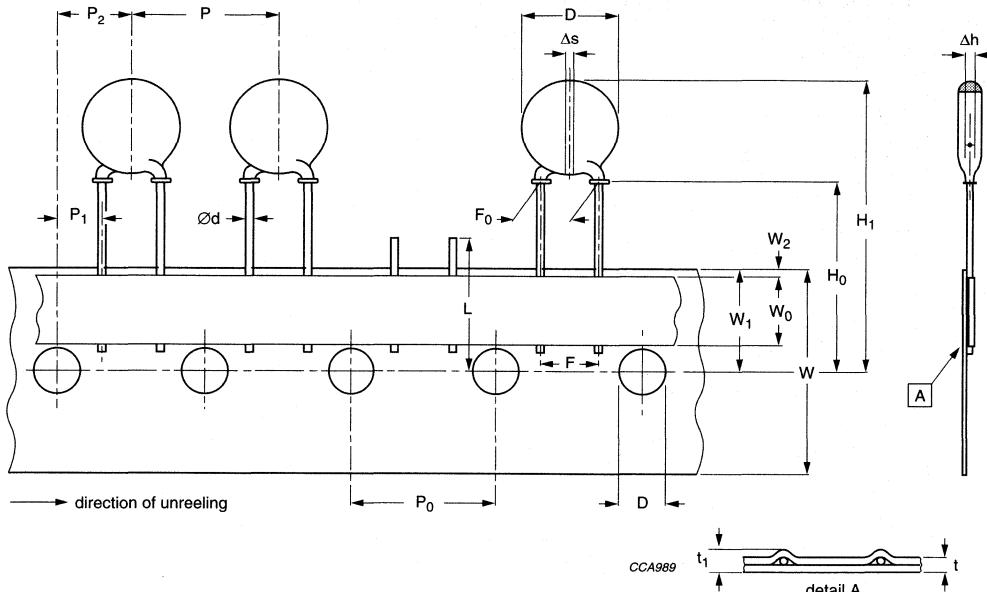

DESCRIPTION	VALUE
Capacitance range at 1 kHz, 1 V (RMS)	100 to 10000 pF
Tolerance on capacitance	$\pm 10\%$ , $\pm 20\%$
Rated AC voltage	250 V
AC test voltage	2500 V
Insulation resistance at 500 V (DC)	$\geq 10000 \text{ M}\Omega$
Temperature coefficients on capacitance	100 pF to 470 pF (Y5P); 680 pF and higher (Y5U)
Dissipation factor at 1 kHz, 1 V (RMS)	2.5% max.
Operating temperature range	-30 to +85 °C
Climatic category	25/085/21

### TESTS AND REQUIREMENTS

#### Class 1 capacitors

After manufacture, each capacitor is checked on capacitance,  $\tan \delta$  and test voltage. Apart from this the following quality checks are carried out by frequent inspections.

Essentially all tests mentioned in the schedule of "IEC publication 384-8", category 55/125/21 (temperature range  $-55/+125^{\circ}\text{C}$ ; damp heat, long term, 21 days) are carried out in accordance with "IEC publication 68".

## General data

**Class 2 capacitors**

After manufacture, each capacitor is checked on capacitance,  $\tan \delta$  and test voltage. Apart from this the following quality checks are carried out by frequent inspections.

Essentially all tests mentioned in the schedule of "IEC publication 384-9", categories 55/125/21 and 10/85/21 respectively for X7R-2C1 and Z5U (temperature ranges  $-55/+125^{\circ}\text{C}$  and  $+10/+85^{\circ}\text{C}$ ; damp heat, long term, 21 days) are carried out in accordance with "IEC publication 68".

## Leaded ceramic multilayer capacitors

## Mono-axial™ series

### FEATURES

- High capacitance per unit volume
- Low cost.

### APPLICATIONS

These conformally coated axial leaded capacitors are designed for commercial and industrial applications in four dielectrics, NP0 (ultra-stable), X7R (stable) and Z5U, Y5V (general purpose). Applications include timing, coupling/decoupling, signal comparison and biasing. Mono-axial™ capacitors are suitable for automatic insertion equipment.

### DESCRIPTION

The basic capacitor construction consists of ceramic dielectric materials processed into a tape with a typical thickness range from 0.025 to 0.076 mm. Metal electrode patterns are applied using a thick film screening process. Multiple layers are stacked and laminated in such a manner that electrodes are alternately exposed when the pattern is cut into individual chip capacitors. The capacitors are fired through a high temperature profile to mature the ceramic and metal into a homogeneous unit.

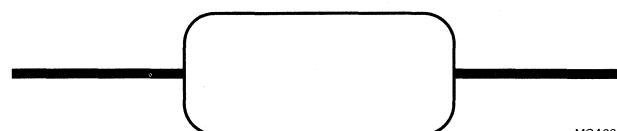

Metal end terminations are applied and fired to provide electrical connection between the individual layers. Tinned leads are attached using a solder. Encapsulation consists of a moisture resistant gold colour conformal epoxy coating that meets the flame requirements of "UL94V-0".

# Leaded ceramic multilayer capacitors

# Mono-kap™ series

## FEATURES

- Very high capacitance per unit volume
- Low cost.

## APPLICATIONS

These conformally coated radial leaded capacitors are designed for commercial and industrial applications in four dielectrics, NPO (ultra-stable), X7R (stable) and Z5U, Y5V (general purpose). Applications include timing, coupling/decoupling, signal comparison and biasing. Mono-kap™ capacitors are suitable for automatic insertion equipment.

## DESCRIPTION

The basic capacitor construction consists of ceramic dielectric materials processed into a tape with a typical thickness range from 0.025 to 0.076 mm. Metal electrode patterns are applied using a thick film screening process. Multiple layers are stacked and laminated in such a manner that electrodes are alternately exposed when the pattern is cut into individual chip capacitors. The capacitors are fired through a high temperature profile to mature the ceramic and metal into a homogeneous unit.

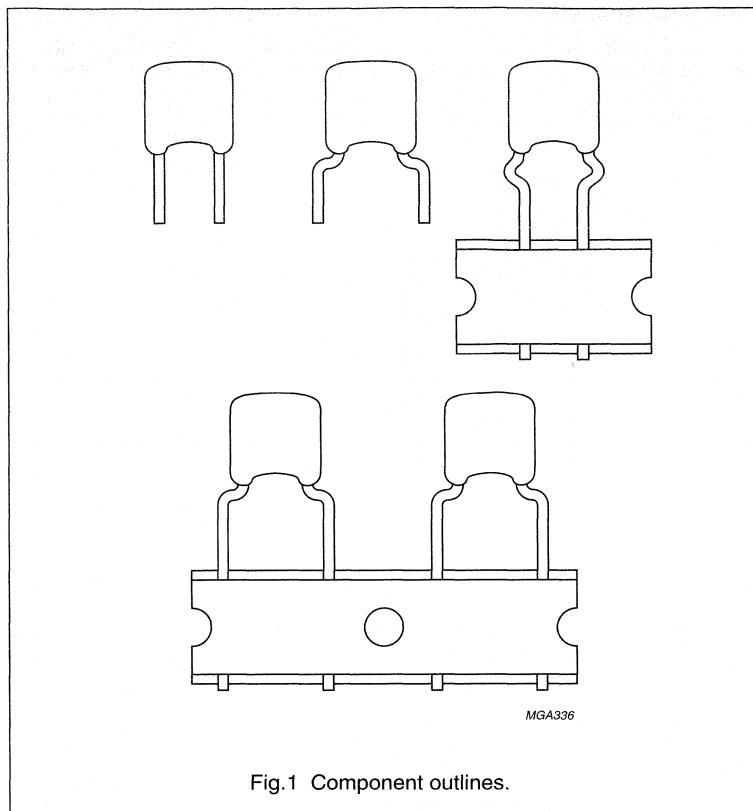

Fig.1 Component outlines.

Metal end terminations are applied and fired to provide electrical connection between the individual layers. Tinned leads are attached using a solder.

Encapsulation consists of a moisture-resistant gold colour conformal epoxy coating that meets the flame requirements of "UL94V-0".

## Notes

1. Bulk packed products have a standard lead length L ≥ 25.4 mm.
2. Dimensions between the parentheses are in inches.
3. Thickness defined as T.

Marking<sup>(1)(2)</sup> (see Fig.6)

## Capacitance code (CCC):

10 pF to 99 pF;  
actual value in pF (2 digits only)  
100 pF and above;  
coded capacitance value  
(same as used in P/N).

## Capacitance tolerance (T):

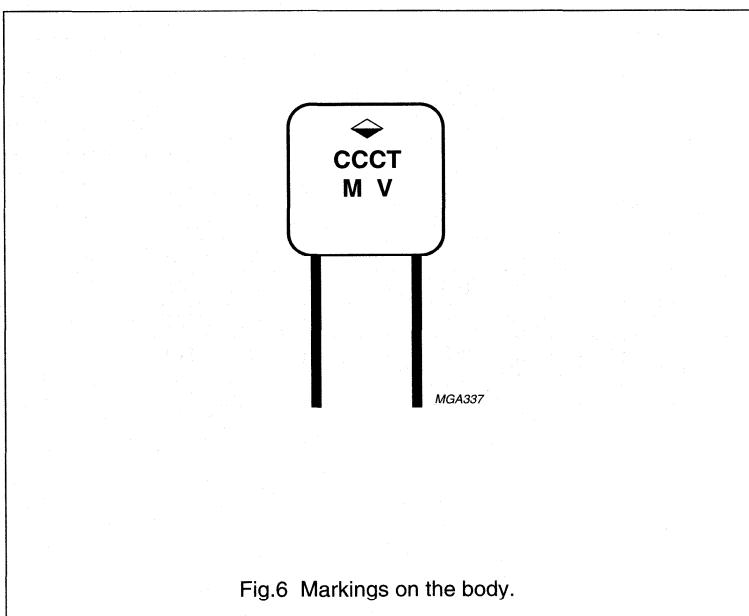

Standard EIA tolerance.

## Material code (M):

A = NP0 (COG)  
C = X7R  
E = Z5U  
Y = Y5V.

## Voltage code (V):

1 = 100 V  
3 = 25 V  
5 = 50 V.

- (1) 100 pF and above in size code 15 are marked without capacitance tolerance code (T).
- (2) Only size code 30 and above are marked with the material code (M) and voltage code (V).

**ELECTRICAL CHARACTERISTICS****Table 3** Electrical data for NP0, X7R, Z5U and Y5V; also conditions for Tables 5, 6 and 7

The capacitors meet the essential requirements of "IEC 384-8", "IEC 384-9" and "EIA198".

Unless stated otherwise all electrical values apply at an ambient temperature of  $25 \pm 3^\circ\text{C}$ , at barometric pressures of 650 to 800 mm of mercury, and relative humidity not to exceed 75%.

DESCRIPTION	VALUE
<b>Capacitors with temperature coefficient NP0</b>	
Capacitance range:	
at 1 MHz, 1 V; where $C \leq 1000 \text{ pF}$	10 to 1000 pF
at 1 kHz, 1 V; where $C > 1000 \text{ pF}$	1200 pF to 0.01 $\mu\text{F}$
Tolerance on the capacitance	$\pm 5\%$ , $\pm 10\%$
Rated DC voltage	50 and 100 V
Dielectric strength	250% of rated voltage
Insulation resistance at rated voltage	100000 M $\Omega$ or $1000 \text{ M}\Omega \times \mu\text{F}$ , whichever is less at $25^\circ\text{C}$
Temperature coefficient of the capacitance	$0 \times 10^{-6}/\text{K}$
Tolerance on the temperature coefficient	$\pm 30 \times 10^{-6}/\text{K}$
Dissipation factor:	
at 1 MHz, 1 V; where $C \leq 30 \text{ pF}$	$< \frac{1}{(400 + 20 \times C)}$
at 1 kHz, 1 V; where $C > 30 \text{ pF}$	$< 15 \times 10^{-4}$
Operating temperature range	-55 to $+125^\circ\text{C}$
Storage temperature range	-55 to $+85^\circ\text{C}$
<b>Capacitors with temperature coefficient X7R</b>	
Capacitance range at 1 kHz, 1 V	100 pF to 1.0 $\mu\text{F}$
Tolerance on the capacitance	$\pm 10\%$ , $\pm 20\%$
Maximum capacitance variation with respect to capacitance value at $25^\circ\text{C}$	$\pm 15\%$
Rated DC voltage	50 and 100 V
Dielectric strength	250% of rated voltage
Insulation resistance at rated voltage	100000 M $\Omega$ or $1000 \text{ M}\Omega \times \mu\text{F}$ , whichever is less at $25^\circ\text{C}$
Dissipation factor at 1 kHz, 1 V	$\leq 2.5\%$
Operating temperature range	-55 to $+125^\circ\text{C}$
Storage temperature range	-55 to $+85^\circ\text{C}$
Ageing	typical 1% per time decade

## Miniature ceramic plate capacitors

## General data

### CURRENT AND MAINTENANCE TYPES

Current ceramic plate capacitors have leads provided with a flange. They are available in a wide variety of executions. The flange ensures excellent solderability and component height definition on the printed-circuit boards. These capacitors are suitable for both hand mounting and automatic insertion.

Ceramic plate capacitors **without flanged leads** are **not** for design-in. They are for maintenance purposes only. They are not available on tape.

The electrical properties of capacitors with flanged leads are the same as the electrical properties of capacitors with straight leads.

### TC DEFINITION AND RELEVANT CODES

The variation of capacitance with temperature is determined by:

1. Temperature coefficient of capacitance.
2. Temperature characteristic of capacitance.

The temperature coefficient of capacitance is applicable to class 1 capacitors. They show a predictable and almost linear change of capacitance with temperature.

This makes them suitable for temperature compensation in resonant and tuning circuits (N150 to N1500), and in all critical applications which require a very small capacitance change with temperature (NP0).

The dielectric number indicates the nominal value of the temperature coefficient of capacitance with the letters 'P' or 'N' indicating a positive or negative capacitance change with the temperature. For example, P100 indicates a positive temperature coefficient of  $100 \times 10^{-6}/^{\circ}\text{C}$  and N750 indicates a negative temperature coefficient of  $750 \times 10^{-6}/^{\circ}\text{C}$ . In accordance with "RS198", the P100 is identified with the code M7G and the N750 with the code U2J.

The temperature characteristic of capacitance is specified by means of letters and numbers denoting the maximum permissible capacitance change from  $20\ ^{\circ}\text{C}$  over a specified temperature range. The "EIA publication RS198" has a similar coding system but the reference temperature is  $25\ ^{\circ}\text{C}$ .

Tables 1 and 2 show the temperature characteristic of capacitance in accordance with "IEC 384-9" and "RS198" respectively.

Table 3 shows the temperature coefficient codes in accordance with "RS198".

As an example, a capacitor with a capacitance change of  $-56$  to  $+20\%$  in the temperature range from  $-55$  to  $+85\ ^{\circ}\text{C}$  will be defined as a class 2E2 capacitor in accordance with "IEC 384-9" and X5U in accordance with "RS198".

Also, a capacitor with a temperature change of  $0 \pm 30\text{ ppm}$  will be defined as COG in accordance with "RS198" (see Table 3) and NP0 in accordance with "IEC 384-8".

**COMPOSITION, COLOUR CODING AND MARKING**

Tables 4 and 5 show the composition of the materials used in ceramic plate capacitors. Colour coding indicating the temperature coefficient or temperature dependency is given.

The capacitance is marked on the body of the plate capacitors in a 3-digit code: two numbers corresponding with the numerical capacitance value and one letter indicating the multiplier and the decimal point. For example: 1p0 = 1.0 pF, 22n = 22 nF.

## TESTS AND REQUIREMENTS

## Class 1 capacitors

After manufacture, each capacitor is checked on capacitance,  $\tan \delta$  and test voltage. Apart from this the following quality checks are carried out by frequent inspections.

Essentially all tests mentioned in the schedule of "IEC publication 384-8", category as specified for each product family are carried out in accordance with "IEC publication 68".

## General data

**Class 2 capacitors**

After manufacture, each capacitor is checked on capacitance,  $\tan \delta$  and test voltage. Apart from this the following quality checks are carried out by frequent inspections.

Essentially all tests mentioned in the schedule of "IEC publication 384-9", category as specified for each product family, are carried out in accordance with "IEC publication 68".

## Miniature ceramic plate capacitors

## Precision capacitors NP0

### FEATURES

- High-frequency circuits
- High reliability
- High stability
- Space saving.

### APPLICATIONS

In a great variety of electronic circuits, e.g. in filters, tuning circuits and other professional applications where high stability, precision, reliability and low losses are a requirement. Because of their small size the capacitors are suitable for use in circuitry with high component density. The high reliability even in most demanding environmental conditions make the product suitable for automotive, telecommunications and other electronic circuits used at high temperatures.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized, and tinned connecting leads are secured using a high melting point solder. The capacitors are encapsulated in epoxy lacquer, which is resistant to all commonly used cleaning solvents. They have small dimensions and narrow tolerances on the lead spacing. The leads are provided with a flange, which guarantees that the leads are free of lacquer, and its shape allows soldering gasses to escape freely, ensuring excellent solderability. This makes the capacitors suitable for both hand-mounting and automatic insertion. The electrical properties are characterized by low losses, a very narrow tolerance on capacitance ( $\pm 0.1 \text{ pF}$  or 1%), high stability and, owing to the absence of silver, an extremely good DC behaviour.

**Marking**

The temperature coefficient is indicated by a colour code in accordance with IEC and EIA recommendations. Capacitance value is indicated by a marking code in a contrasting colour on the body. Refer to Table 4, for marking codes.

**Mounting**

When bending, cutting or flattening, the leads should be relieved of the applied load by supporting them at the capacitor body.

## Soldering conditions:

max. 265 °C, max. 10 s.

The capacitors are suitable for mounting on printed-circuit boards (hand-mounting or automatic insertion).

## Miniature ceramic plate capacitors

**Class 1, 100 V (DC)  
(flanged types)**

### ELECTRICAL CHARACTERISTICS

The capacitors meet the essential requirements of "IEC 384-8". Unless stated otherwise all electrical values apply at an ambient temperature of  $20 \pm 1^\circ\text{C}$ , an atmospheric pressure of 86 to 106 kPa and a relative humidity of 63 to 67%.

DESCRIPTION	VALUE
Capacitance values (note 1) measured at 1 MHz, $\leq 5\text{ V}$	see Tables 4 to 12
Rated DC voltage	100 V
DC test voltage; duration 1 minute	300 V
DC test voltage of coating; duration 1 minute	300 V
Insulation resistance at 100 V (DC) after 1 minute	$\geq 10000\text{ M}\Omega$
Tan $\delta$ (note 1) measured at 1 MHz, $\leq 5\text{ V}$ :	
$C \leq 50\text{ pF}$	$\leq 15 \left( \frac{15}{C} + 0.7 \right) \times 10^{-4}; < 55 \times 10^{-4}$
$C > 50\text{ pF}$	$\leq 15 \times 10^{-4}$
Category temperature range	-55 to +85 °C (N150, N750); -55 to +125 °C (P100, NP0, N1500)
Storage temperature range	-55 to +85 °C

#### Note

1. Including 2 mm per connecting lead.

## Miniature ceramic plate capacitors

**Class 2, 63 V and 100 V (DC)  
(flanged types)**

### FEATURES

- General purpose
- Coupling and decoupling
- Space saving.

### APPLICATIONS

In electronic circuits where non-linear change of capacitance with temperature is permissible and low losses are not essential, i.e. coupling and decoupling. Because of their small size the capacitors are suitable for use in circuitry with high component density.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized. The tinned connecting leads are secured using a high melting point solder. The capacitors are encapsulated in epoxy lacquer, which is resistant to all commonly used cleaning solvents. They have small dimensions and narrow tolerances on the lead spacing. The leads are provided with a flange, which guarantees that the leads are free of lacquer, and its shape allows soldering gasses to escape freely, ensuring excellent solderability. This makes the capacitors suitable for both hand-mounting and automatic insertion.

# Miniature ceramic plate capacitors

## Class 2, 63 V and 100 V (DC) (flanged types)

### Marking

The body of the capacitor is tan coloured. The capacitors also have a colour mark on top indicating the temperature dependency of the capacitance:

yellow for type 2222 630 .....

blue for type 2222 640 .....

green for type 2222 629 .....

The capacitance value is indicated by a marking code in a contrasting colour on the body. Refer to Tables 3, 4 and 5 for marking codes.

### Mounting

When bending, cutting or flattening, the leads should be relieved of the applied load by supporting them at the capacitor body.

#### Soldering conditions:

max. 265 °C, max. 10 s.

The capacitors are suitable for mounting on printed-circuit boards (hand-mounting or automatic insertion).

### FEATURES

- Professional circuits
- High-frequency circuits
- Temperature compensating
- High stability
- Space saving
- High reliability.

### APPLICATIONS

In a great variety of electronic circuits, e.g. in filters and tuning circuits where high stability and/or temperature compensation are a requirement. Because of their small size the capacitors are suitable for use in circuitry with high component density.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized, and tinned connecting leads are secured using a high melting point solder. The capacitors are encapsulated in epoxy lacquer, which is resistant to all commonly used cleaning solvents. They have small dimensions and narrow tolerances on the lead spacing. The leads are provided with a flange, which guarantees that the leads are free of lacquer, and its shape allows soldering gasses to escape freely, ensuring excellent solderability. This makes the capacitors suitable for both hand-mounting and automatic insertion. The electrical properties are characterized by low losses, a narrow tolerance on capacitance ( $\pm 0.25 \text{ pF}$  or 2%), high stability and, owing to the absence of silver, an extremely good DC behaviour.

## MECHANICAL DATA

## Marking

The body of the capacitors is coloured grey. The temperature coefficient is indicated by a colour code in accordance with IEC and EIA recommendations. Capacitance value and voltage are indicated by a marking code in a contrasting colour on the body. Refer to Tables 3 to 12, for marking codes and colours.

## Mounting

When bending, cutting or flattening, the leads should be relieved of the applied load by supporting them at the capacitor body.

## Soldering conditions:

max. 265 °C, max. 10 s.

The capacitors are suitable for mounting on printed-circuit boards (hand-mounting or automatic insertion).

## Miniature ceramic plate capacitors

**Class 2, 500 V (DC)  
(flanged types)**

### FEATURES

- Professional circuits
- Coupling and decoupling
- Space saving
- High reliability
- High temperature circuits.

### APPLICATIONS

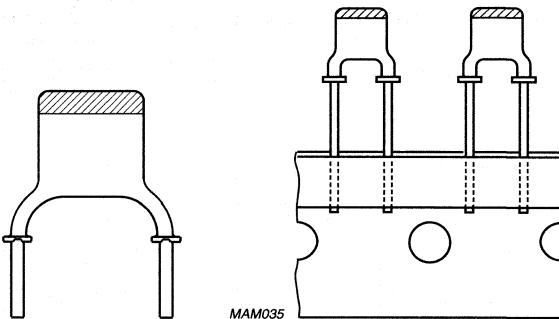

In electronic circuits where non-linear change of capacitance with temperature is permissible and low losses are not essential, e.g. coupling and decoupling. Because of their small size, the capacitors are ideal for circuitry with high component density.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized. The tinned connecting leads are secured using a high melting point solder. The capacitors are encapsulated in epoxy lacquer, which is resistant to all commonly used cleaning solvents. They have small dimensions and narrow tolerances on the lead spacing. The leads are provided with a flange. The flange guarantees that the leads are free of lacquer, and its shape allows soldering gasses to escape freely, ensuring excellent solderability. This makes the capacitors suitable for both hand-mounting and automatic insertion.

### Marking

The body of the capacitors is tan coloured. The temperature dependence is indicated by a yellow coloured cap. Capacitance value and voltage are indicated by a marking code in a contrasting colour on the body. Refer to Table 3 for marking codes.

### Mounting

When bending, cutting or flattening, the leads should be relieved of the applied load by supporting them at the capacitor body.

### Soldering conditions:

max. 265 °C, max. 10 s.

The capacitors are suitable for mounting on printed-circuit boards (hand-mounting or automatic insertion).

### FEATURES

- High reliability
- High-frequency circuits
- High stability
- Space saving
- High temperature circuits
- Professional circuits.

### QUICK REFERENCE DATA

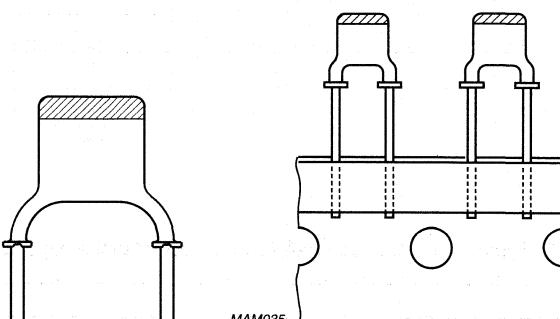

DESCRIPTION	VALUE

Sectional specification	IEC 384-8
Climatic category (IEC 68)	55/150/56

### APPLICATIONS

In a great variety of electronic circuits, e.g. in filters and tuning circuits where stability and low losses are a requirement. Because of their small size the capacitors are suitable for use in circuitry with high component density such as SMPS.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized, and tinned connecting leads are secured using a high melting point solder. The capacitors are encapsulated in epoxy lacquer, which is resistant to all commonly used cleaning solvents. They have small dimensions and narrow tolerances on the lead spacing. The leads are provided with a flange, which guarantees that the leads are free of lacquer, and its shape allows soldering gasses to escape freely, ensuring excellent solderability. This makes the capacitors suitable for both hand-mounting and automatic insertion. The electrical properties are characterized by low losses, a narrow tolerance on capacitance ( $\pm 0.25 \text{ pF}$  or 5%), high stability and, owing to the absence of silver, an extremely good DC behaviour.

## Notes

1. Temperature coefficient code in accordance with "RS198" is shown between parentheses.
2. Other capacitance values and tolerances are available on request. Customized sample kits are also available on request.
3. E24 series of values are available on request.

## **DATA HANDBOOK SYSTEM**

#### DATA HANDBOOK SYSTEM

Philips Components data handbooks are available for selected product ranges and contain all relevant data available at the time of publication and each is revised and updated regularly.

Loose data sheets are sent to subscribers to keep them up-to-date on additions or alterations made during the lifetime of each edition.

Our data handbook titles are listed here.

#### Display components

Book	Title
DC01	Colour Television Tubes
DC02	Monochrome Monitor Tubes and Deflection Units
DC03	Television Tuners, Coaxial Aerial Input Assemblies
DC04	Colour Monitor and Multimedia Tubes
DC05	Wire Wound Components

#### Magnetic products

MA01	Soft Ferrites
MA03	Piezoelectric Ceramics and Specialty Ferrites
MA04	Dry-reed Switches

#### Passive components

PA01	Electrolytic Capacitors
PA02	Varistors, Thermistors and Sensors
PA03	Potentiometers
PA04	Variable Capacitors
PA05	Film Capacitors
PA06	Ceramic Capacitors
PA06a	Surface Mounted Ceramic Multilayer Capacitors
PA06b	Leaded Ceramic Capacitors
PA08	Fixed Resistors
PA10	Quartz Crystals
PA11	Quartz Oscillators

## OVERVIEW OF PHILIPS SEMICONDUCTORS DATA HANDBOOKS

Our sister product division, Philips Semiconductors, also has a comprehensive data handbook system to support their products. Their data handbook titles are listed here.

### Integrated circuits

Book	Title
IC01	Semiconductors for Radio, Audio and CD/DVD Systems
IC02	Semiconductors for Television and Video Systems
IC03	Semiconductors for Wired Telecom Systems
IC04	HE4000B Logic Family CMOS
IC05	Advanced Low-power Schottky (ALS) Logic
IC06	High-speed CMOS Logic Family
IC11	General-purpose/Linear ICs
IC12	I <sup>2</sup> C Peripherals
IC13	Programmable Logic Devices (PLD)
IC14	8048-based 8-bit Microcontrollers
IC15	FAST TTL Logic Series
IC16	CMOS ICs for Clocks and Watches
IC17	Semiconductors for Wireless Communications
IC18	Semiconductors for In-Car Electronics
IC19	ICs for Data Communications
IC20	80C51-based 8-bit Microcontrollers
IC22	Multimedia ICs
IC23	BiCMOS Bus Interface Logic
IC24	Low Voltage CMOS & BiCMOS Logic
IC25	16-bit 80C51XA Microcontrollers (eXtended Architecture)
IC26	IC Circuit Packages
IC27	Complex Programmable Logic Devices

### Discrete semiconductors

SC01	Small-signal and Medium-power Diodes
SC02	Power Diodes
SC03	Power Thyristors and Triacs
SC04	Small-signal Transistors
SC05	Video Transistors and Modules for Monitors
SC06	High-voltage and Switching NPN Power Transistors
SC07	Small-signal Field-effect Transistors
SC13a	PowerMOS Transistors including TOPFETs and IGBTs
SC13b	Small-signal and Medium-power MOS Transistors
SC14	RF Wideband Transistors
SC16	Wideband Hybrid IC Modules
SC17	Semiconductor Sensors
SC18	Discrete Semiconductor Packages
SC19	RF & Microwave Power Transistors, RF Power Modules and Circulators/Isolators
