DATA HANDBOOK SYSTEM

To provide you with a comprehensive source of information on electronic components, subassemblies and materials, our Data Handbook System is made up of three series of handbooks, each comprising several parts.
The three series, identified by the colours noted, are:

ELECTRON TUBES (9 parts) BLUE

SEMICONDUCTORS AND INTEGRATED CIRCUITS (5 parts) RED

COMPONENTS AND MATERIALS (7 parts) GREEN

The several parts contain all pertinent data available at the time of publication, and each is revised and reissued annually; the contents of each series are summarized on the following pages.
We have made every effort to ensure that each series is as accurate, comprehensive and up-to-date as possible, and we hope you will find it to be a valuable source of reference. Where ratings or specifications quoted differ from those published in the preceding edition they will be pointed out by arrows. You will understand that we can not guarantee that all products listed in any one edition of the handbook will remain available, or that their specifications will not be changed, before the next edition is published. If you need confirmation that the pusblished data about any of our products are the latest available, may we ask that you contact our representative. He is at your service and will be glad to answer your inquiries.

ELECTRON TUBES (BLUE SERIES)

This series consists of the following parts, issued on the dates indicated.

Part 1 — **January 1971**

Transmitting tubes (Tetrodes, Pentodes)
Associated accessories

Part 2 — **March 1971**

Tubes for microwave equipment

Part 3 — **March 1970**

Special Quality tubes
Miscellaneous devices

Part 4 — **April 1971**

Receiving tubes

Part 5 — **May 1971**

Cathode-ray tubes
Photo tubes
Camera tubes
Photoconductive devices
Associated accessories

Part 6 — **June 1971**

Photomultipliers tubes
Channel electron multipliers
Scintillators
Photoscintillators
Radiation counter tubes
Semiconductor radiation detectors
Neutron generator tubes
Photo diodes
Associated accessories

Part 7 — **July 1971**

Voltage stabilizing and reference tubes
Counter, selector, and indicator tubes
Trigger tubes
Switching diodes
Thyratrons
Ignitrons
Industrial rectifying tubes
High-voltage rectifying tubes

Part 8 — **August 1971**

T.V. Picture tubes

Part 9 — **January 1971**

Transmitting tubes (Triodes)
Tubes for R.F. heating (Triodes)
Associated accessories

August 1971

SEMICONDUCTORS AND INTEGRATED CIRCUITS (RED SERIES)

This series consists of the following parts, issued on the dates indicated.

Part 1 Diodes and Thyristors **September 1971**

General
Signal diodes
Variable capacitance diodes
Voltage regulator diodes
Rectifier diodes
Thyristors, diacs, triacs
Rectifier stacks
Accessories
Heatsinks

Part 2 Low frequency; Deflection **October 1971**

General
Low frequency transistors (low power)
Low frequency power transistors
Deflection transistors
Accessories

Part 3 High frequency; Switching **November 1970**

General
High frequency transistors
Switching transistors
Accessories

Part 4 Special types **December 1970**

General
Transmitting transistors
Microwave devices
Field effect transistors
Dual transistors
Microminiature devices for thick- and thin-film circuits
Beam lead devices for thick- and thin-film circuits
Photo devices
Accessories

Part 5 Integrated Circuits **March 1971**

General
Digital integrated circuits
- DTL (FC family)
- TTL (FJ family)
- MOS (FD family)

Linear integrated circuits

COMPONENTS AND MATERIALS (GREEN SERIES)

This series consists of the following parts, issued on the dates indicated.

Part 1 Circuit Blocks, Input/Output Devices, Electro-mechanical Components *), Peripheral Devices — **October 1971**

Circuit blocks 40-Series
Counter modules 50-Series
Norbits 60-Series, 61-Series
Circuit blocks 90-Series
Input/output devices
Electro-mechanical components *)
Peripheral devices

Part 2 Resistors, Capacitors — **December 1970**

Fixed resistors
Variable resistors
Non-linear resistors
Ceramic capacitors
Polyester, polycarbonate, polystyrene, paper capacitors
Electrolytic capacitors
Variable capacitors

Part 3 Radio, Audio, Television — **February 1971**

FM tuners
Coils * *)
Piezoelectric ceramic resonators and filters
Loudspeakers
Audio and mains transformers
Television tuners
Components for black and white television
Components for colour television
Deflection assemblies for camera tubes

Part 4 Magnetic Materials, Piezoelectric Ceramics — **April 1971**

Ferrites for radio, audio and television
Small coils, assemblies and assembling parts
Ferroxcube potcores and square cores
Ferroxcube transformer cores
Piezoxide
Permanent magnet materials

Part 5 Memory Products, Magnetic Heads, Quartz Crystals, Microwave Devices, Variable Transformers — **June 1971**

Ferrite memory cores
Matrix planes, matrix stacks
Complete memories
Magnetic heads
Quartz crystal units, crystal filters
Isolators, circulators
Variable mains transformers

Part 6 Electric Motors and Accessories, Timing and Control Devices — **August 1971**

Stepper motors
Small synchronous motors
Asynchronous motors
Small d.c. motors
Tachogenerators and servomotors
Indicators for built-in test equipment

Part 7 Circuit Blocks — **September 1971**

Circuit blocks 100kHz Series
Circuit blocks 1-Series
Circuit blocks 10-Series
Circuit blocks for ferrite core memory drive

*) From October 1971 published in Part 1 instead of Part 5.
* *) Also included (under "Small coils, etc.") in Part 4.

Technology relating to the products described in this publication is shared by the following companies.

PRO ELECTRON TYPE DESIGNATION CODE

FOR SEMICONDUCTOR DEVICES

This type designation code applies to discrete devices and to multiple devices [1])

The type designation consists of:

TWO LETTERS FOLLOWED BY A SERIAL NUMBER

The first letter gives an indication of the material

A Material with a band gap of 0.6 to 1.0 eV, such as germanium

B Material with a band gap of 1.0 to 1.3 eV, such as silicon

C Material with a band gap of 1.3 eV and more, such as gallium arsenide

D Material with a band gap of less than 0.6 eV, such as indium antimonide

R Compound material as employed in Hall generators and photoconductive cells

---

[1]) A multiple device is defined as a combination of similar or dissimilar active devices, contained in a common encapsulation that cannot be dismantled, and of which all electrodes of the individual devices are accessible from the outside.

Multiples of similar devices as well as multiples consisting of a main device and an auxiliary device are designated according to the code for discrete devices described above.
Multiples of dissimilar devices of other nature are designated by the second letter G.

The second letter indicates primarily the main application respectively main application and construction if a further differentiation is essential

- A Detection diode, switching diode, mixer diode
- B Variable capacitance diode
- C Transistor for a.f. applications ($R_{th\ j\text{-}mb} > 15\ ^oC/W$)
- D Power transistor for a.f. applications ($R_{th\ j\text{-}mb} \leq 15\ ^oC/W$)
- E Tunnel diode
- F Transistor for h.f. applications ($R_{th\ j\text{-}mb} > 15\ ^oC/W$)
- G Multiple of dissimilar devices (see note on page 1); Miscellaneous
- H Magnetic sensitive diode; Field probe
- K Hall generator in an open magnetic circuit, e.g. magnetogram or signal probe
- L Power transistor for h.f. applications ($R_{th\ j\text{-}mb} \leq 15\ ^oC/W$)
- M Hall generator in a closed electrically energised magnetic circuit, e.g. Hall modulator or multiplier
- P Radiation sensitive device [1]
- Q Radiation generating device
- R Electrically triggered controlling and switching device having a breakdown characteristic ($R_{th\ j\text{-}mb} > 15\ ^oC/W$)
- S Transistor for switching applications ($R_{th\ j\text{-}mb} > 15\ ^oC/W$)
- T Electrically, or by means of light, triggered controlling and switching power device having a breakdown characteristic ($R_{th\ j\text{-}mb} \leq 15\ ^oC/W$) [1]
- U Power transistor for switching applications ($R_{th\ j\text{-}mb} \leq 15\ ^oC/W$)
- X Multiplier diode, e.g. varactor, step recovery diode
- Y Rectifying diode, booster diode, efficiency diode [1]
- Z Voltage reference or voltage regulator diode [1]

1) For the type designation of a range see page 4.

The serial number consists of:

Three figures for semiconductor devices designed primarily for use in domestic equipment

One letter and two figures for semiconductor devices designed primarily for use in professional equipment

VERSION LETTER

A version letter can be used, for instance, for a diode with up-rated voltage, for a sub-division of a transistor type in different gain ranges, a low noise version of an existing transistor and for a diode, transistor, or thyristor with minor mechanical differences, such as finish of the leads, length of the leads etc. The letters never have a fixed meaning, the only exception being the letter R.

EXAMPLES

AC187	Germanium low power a.f. transistor intended primarily for domestic equipment
BYX27	Silicon rectifying diode intended primarily for professional equipment

TYPE DESIGNATION FOR A RANGE OF SEMICONDUCTOR DEVICES

The type designation of a range of variants of:

a) voltage reference or voltage regulator diodes (second letter Z)

b) rectifying diodes (second letter Y)

c) thyristors (second letter T)

d) radiation detectors

distinctly belonging to one basic type may be qualified by a suffix part which is clearly separated from the basic part by a dash (-)
The basic part being the same for the whole range, is in accordance with the designation code for discrete devices.

The suffix part consists of:

a) for voltage reference or voltage regulator diodes

one letter followed by the typical zener voltage and where appropriate the letter R [1])
The first letter indicates the nominal tolerance of the zener voltage in %

A	1%
B	2%
C	5%
D	10%
E	15%

The typical zener voltage is related to the nominal current rating for the whole range. The letter V is used to denote the decimal point when this occurs.

b) for rectifying diodes

a number and where appropriate the letter R [1])
The number generally indicates the maximum repetitive peak reverse voltage
For controlled avalanche types it indicates the maximum crest working reverse voltage

c) for thyristors

a number and where appropriate the letter R [1])
The number generally indicates either the maximum repetitive peak reverse voltage or the maximum repetitive peak off-state voltage, whichever is lower
For controlled avalanche types it indicates the maximum crest working reverse voltage

[1]) The letter R indicates reverse polarity (anode to stud). The normal polarity (cathode to stud) and symmetrical executions are not specially indicated.

d) for radiation detectors

a figure giving the depth of the depletion layer in μm and where appropriate a version letter if there are differences in resolution.

EXAMPLES

BZY88series	Range of silicon voltage regulator diodes for professional equipment
BZY88-C9V1	The particular type out of the range with a typical zener voltage of 9.1 V ± 5%
BYX13-1200	The particular normal polarity type out of the BYX13series with a maximum repetitive peak reverse voltage of 1200 V
BTW92-800R	The particular reverse polarity type out of the BTW92 thyristor range of which the lower maximum repetitive peak voltage is 800V

RATING SYSTEMS

ACCORDING TO I.E.C. PUBLICATION 134

1. DEFINITIONS OF TERMS USED

1.1 Electronic device. An electronic tube or valve, transistor or other semiconductor device.
Note: This definition excludes inductors, capacitors, resistors and similar components.

1.2 Characteristic. A characteristic is an inherent and measurable property of a device. Such a property may be electrical, mechanical, thermal, hydraulic, electro-magnetic, or nuclear, and can be expressed as a value for stated or recognized conditions. A characteristic may also be a set of related values, usually shown in graphical form.

1.3 Bogey electronic device. An electronic device whose characteristics have the published nominal values for the type. A bogey electronic device for any particular application can be obtained by considering only those characteristics which are directly related to the application.

1.4 Rating. A value which establishes either a limiting capability or a limiting condition for an electronic device. It is determined for specified values of environment and operation, and may be stated in any suitable terms.
Note: Limiting conditions may be either maxima or minima.

1.5 Rating system. The set of principles upon which ratings are established and which determine their interpretation.
Note: The rating system indicates the division of responsibility between the device manufacturer and the circuit designer, with the object of ensuring that the working conditions do not exceed the ratings.

2. ABSOLUTE MAXIMUM RATING SYSTEM

Absolute maximum ratings are limiting values of operating and environmental conditions applicable to any electronic device of a specified type as defined by its published data, which should not be exceeded under the worst probable conditions.

These values are chosen by the device manufacturer to provide acceptable serviceability of the device, taking no responsibility for equipment variations, environmental variations, and the effects of changes in operating conditions due to variations in the characteristics of the device under consideration and of all other electronic devices in the equipment.

p.t.o.

The equipment manufacturer should design so that, initially and throughout life, no absolute maximum value for the intended service is exceeded with any device under the worst probable operating conditions with respect to supply voltage variation, equipment component variation, equipment control adjustment, load variations, signal variation, environmental conditions, and variations in characteristics of the device under consideration and of all other electronic devices in the equipment.

3. DESIGN MAXIMUM RATING SYSTEM

Design maximum ratings are limiting values of operating and environmental conditions applicable to a bogey electronic device of a specified type as defined by its published data, and should not be exceeded under the worst probable conditions.

These values are chosen by the device manufacturer to provide acceptable serviceability of the device, taking responsibility for the effects of changes in operating conditions due to variations in the characteristics of the electronic device under consideration.

The equipment manufacturer should design so that, initially and throughout life, no design maximum value for the intended service is exceeded with a bogey device under the worst probable operating conditions with respect to supply voltage variation, equipment component variation, variation in characteristics of all other devices in the equipment, equipment control adjustment, load variation, signal variation and environmental conditions.

4. DESIGN CENTRE RATING SYSTEM

Design centre ratings are limiting values of operating and environmental conditions applicable to a bogey electronic device of a specified type as defined by its published data, and should not be exceeded under normal conditions.

These values are chosen by the device manufacturer to provide acceptable serviceability of the device in average applications, taking responsibility for normal changes in operating conditions due to rated supply voltage variation, equipment component variation, equipment control adjustment, load variation, signal variation, environmental conditions, and variations in the characteristics of all electronic devices.

The equipment manufacturer should design so that, initially, no design centre value for the intended service is exceeded with a bogey electronic device in equipment operating at the stated normal supply voltage.

NOTE

It is common use to apply the Absolute Maximum System in semiconductor published data.

LETTER SYMBOLS

LETTER SYMBOLS FOR SEMICONDUCTOR DEVICES
excluding rectifier diodes, thyristors and integrated circuits

This system is based on the Recommendations of the INTERNATIONAL ELECTROTECHNICAL COMMISSION as published in I.E.C. Publication 148.

QUANTITY SYMBOLS

1. Instantaneous values of current, voltage and power, which vary with time are represented by the appropriate lower case letter.

   Examples: i, v, p

2. Maximum (peak), average, d.c. and root-mean-square values are represented by the appropriate upper case letter.

   Examples: I, V, P

SUBSCRIPTS FOR QUANTITY SYMBOLS

1. Total values are indicated by upper case subscripts.

   Examples: I_C, I_{CM}, $I_{C(AV)}$, i_C, V_{EB}

2. Values of varying components are indicated by lower case subscripts.

   Examples: i_c, I_c, v_{eb}, V_{eb}

3. To distinguish between maximum (peak), average, d.c. and root-mean-square values, the following subscripts are added:

   For maximum (peak) values : M or m

   For average values : (AV) or (av) (only if it is necessary to distinguish between d.c. and average)

   For d.c. values : no additional subscript

   For root-mean-square values : (RMS) or (rms)

   Examples: I_C, I_{cm}, $I_{C(AV)}$, $I_{c(rms)}$, $I_{C(RMS)}$

4. List of subscripts (examples, see figure 1)

A, a	= Anode terminal
K, k	= Cathode terminal
E, e	= Emitter terminal
B, b	= Base terminal or Substrate for MOS devices
C, c	= Collector terminal
D, d	= Drain terminal
(BR)	= Break-down
X, x	= Specified circuit
M, m	= Maximum (peak) value
(AV), (av)	= Average value
(RMS), (rms)	= R.M.S. value
F, f	= Forward
G, g	= Gate terminal
R, r	= As first subscript: Reverse. As second subscript: Repetitive
O, o	= As third subscript: The terminal not mentioned is open circuited
S, s	= As first or second subscript: Source terminal (for FETS only) As second subscript: Non-repetitive (not for FETS) As third subscript : Short circuit between the terminal not mentioned and the reference terminal
Z, z	= Zener. (Replaces R to indicate the actual zener voltage, current or power of voltage reference or voltage regulator diodes)

5. Examples of the application of the rules:
Figure 1 represents a transistor collector current, consisting of a direct current and a signal, as a function of time.

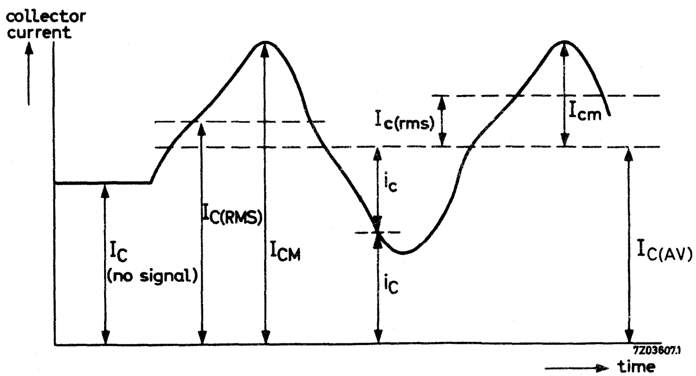

Fig.1

CONVENTIONS FOR SUBSCRIPT SEQUENCE

1. Currents

For transistors: the first subscript indicates the terminal carrying the current (conventional current flow from the external circuit into the terminal is positive)

For diodes: a forward current (conventional current flow into the anode terminal) is represented by the subscript F or f; a reverse current (conventional current flow out of the anode terminal) is represented by the subscript R or r.

2. Voltages

For transistors: normally, two subscripts are used to indicate the points between which the voltage is measured. The first subscript indicates one terminal point and the second the reference terminal.
Where there is no possibility of confusion, the second subscript may be omitted.

For diodes: a forward voltage (anode positive with respect to cathode) is represented by the subscript F or f and a reverse voltage (anode negative with respect to cathode) by the subscript R or r.

3. Supply voltages

Supply voltages may be indicated by repeating the terminal subscript.

Examples: V_{EE}, V_{CC}, V_{BB}

The reference terminal may then be indicated by a third subscript.

Examples: V_{EEB}, V_{CCB}, V_{BBC}

4. In devices having more than one terminal of the same type, the terminal subscripts are modified by adding a number following the subscript and on the same line.

Example: V_{B2-E} voltage between second base and emitter

In multiple unit devices, the terminal subscripts are modified by a number preceding the terminal subscripts:

Example: V_{1B-2B} voltage between the base of the first unit and that of the second one.

ELECTRICAL PARAMETER SYMBOLS

1. The values of four pole matrix parameters or other resistances, impedances admittances, etc... inherent in the device, are represented by the lower case symbol with the appropriate subscripts.

   Examples: h_{ib}, z_{fb}, y_{oc}, h_{FE}

2. The four pole matrix parameters of external circuits and of circuits in which the device forms only a part are represented by the upper case symbols with the appropriate subscripts.

   Examples: H_i, Z_o, H_F, Y_R

SUBSCRIPTS FOR PARAMETER SYMBOLS

1. The static values of parameters are indicated by upper case subscripts.

   Examples: h_{IB}, h_{FE}

Note The static value is the slope of the line from the origin to the operating point on the appropriate characteristic curve, i.e. the quotient of the appropriate electrical quantities at the operating point.

2. The small-signal values of parameters are indicated by lower case subscripts.

   Examples: h_{ib}, z_{ob}

3. The first subscript, in matrix notation identifies the element of the four pole matrix.

   i (for 11) = input
   o (for 22) = output
   f (for 21) = forward transfer
   r (for 12) = reverse transfer

   Examples:
   $$V_1 = h_i I_1 + h_r V_2$$
   $$I_2 = h_f I_1 + h_o V_2$$

Notes 1) The voltage and current symbols in matrix notation are indicated by a single digit subscript.
The subscript 1 = input; the subscript 2 = output
2) The voltages and currents in these equations may be complex quantities.

4. The second subscript identifies the circuit configuration.

e = common emitter
b = common base
c = common collector
j = common terminal, general

Examples: (common base)

$$I_1 = y_{ib} V_{1b} + y_{rb} V_{2b}$$
$$I_2 = y_{fb} V_{1b} + y_{ob} V_{2b}$$

When the common terminal is understood, the second subscript may be omitted.

5. If it is necessary to distinguish between real and imaginary parts of the four pole parameters, the following notations may be used.

$Re(h_{ib})$ etc.. for the real part

$Im(h_{ib})$ etc.. for the imaginary part

LIST OF LETTER SYMBOLS IN ALPHABETICAL ORDER

Letter symbol	Definition
B	Bandwidth
b_{ib}, b_{ie}, b_{is}, b_{fb}, b_{fe}, b_{fs}, b_{ob}, b_{oe}, b_{os}, b_{rb}, b_{re}, b_{rs}	See y parameters
C_c 1)	Collector capacitance (emitter open-circuited to a.c. and d.c.)
C_d 1)	Diode capacitance
C_e 1)	Emitter capacitance (collector open-circuited to a.c. and d.c.)
C_{ib}, C_{ie}, C_{is}, C_{fb}, C_{fe}, C_{fs}, C_{ob}, C_{oe}, C_{os}, C_{rb}, C_{re}, C_{rs}	See y parameters
d	Distortion
F	Noise figure
f	Frequency
f_{hfb}, f_{hfe}, f_{yfe}	Cut-off frequency (frequency at which the parameter indicated by the subscript is 0.7 of its low frequency value)
f_T	Transition frequency (Gain-bandwidth product)
g_{ie}, g_{ib}, g_{oe}, g_{ob}	See y parameters
G_p	Power gain
G_S	Source conductance
G_{tr}	Transducer gain
G_{UM}	Maximum unilateralised power gain
G_v	Voltage gain

1) As an exception to the general rule for electrical parameters capacitances are represented by the upper-case letter.

Letter symbol	Definition
h_{FB}, h_{FC}, h_{FE}	D.C. current gain (static value of the forward current transfer ratio; output voltage held constant)
h_{fb}, h_{fc}, h_{fe}	Small-signal current gain (small-signal value of the forward current transfer ratio; output short-circuited to a.c.)
h_{IB}, h_{IC}, h_{IE}	Static value of the input resistance (output voltage held constant)
h_{ib}, h_{ic}, h_{ie}	Small-signal value of the input impedance (output short-circuited to a.c.)
h_{OB}, h_{OC}, h_{OE}	Static value of the output conductance (input current held constant)
h_{ob}, h_{oc}, h_{oe}	Small-signal value of the output admittance (input open-circuited to a.c.)
h_{RB}, h_{RC}, h_{RE}	Static value of the reverse voltage transfer ratio (input current held constant)
h_{rb}, h_{rc}, h_{re}	Small-signal value of the reverse voltage transfer ratio (input open-circuited to a.c.)
I_B, I_C, I_D, I_E, I_G, I_S	Total d.c. (or average) current
I_b, I_c, I_d, I_e, I_g, I_s	Varying component of the current
i_B, i_C, i_D, i_E, i_G, i_S	Instantaneous total value of the current
i_b, i_c, i_d, i_e, i_g, i_s	Instantaneous value of the varying component of the current
$I_{B(AV)}$, $I_{C(AV)}$, $I_{E(AV)}$	Total average current (to distinguish between average and d.c. if necessary)
I_{BEX}, I_{CEX}	Total base, respectively collector current under specified conditions. These symbols are commonly used in case of a reverse biased emitter junction
I_{BM}, I_{CM}, I_{EM}	Maximum (peak) value of the total current
I_{bm}, I_{cm}, I_{em}	Maximum (peak) value of the varying component of the current
I_{CBO}	Collector cut-off current (open emitter)
I_{CEO}	Collector cut-off current (open base)
I_{CBS} or I_{CES}	Collector cut-off current (emitter short-circuited to base)

Letter symbol	Definition
I_{DSS}	Drain current (source short-circuited to gate)
I_{EBO}	Emitter cut-off current (open collector)
I_F	Total forward current of a diode (d.c. or average)
i_F	Instantaneous total value of the forward current of a diode
$I_{F(AV)}$	Total average forward current of a diode (to distinguish between average and d.c. if necessary)
I_{FM}	Peak forward current of a diode
I_{GSS}	Gate cut-off current (source short-circuited to drain)
I_i, I_o	Input, respectively output current of a specified circuit
I_R	Total reverse (cut-off) current of a diode
i_R	Instantaneous total value of the reverse current of a diode
I_{RRM}	Repetitive peak reverse current of a diode
I_{RSM}	Non-repetitive peak reverse current of a diode
I_{SDS}	Source cut-off current (drain short-circuited to gate)
I_Z	Zener current (d.c. or average)
I_{ZM}	Peak zener current
I_{ZS}	Non-repetitive zener current
P_i, P_o	Input, respectively output power of a specified circuit
P_{tot}	Total power dissipation in the device
P_Z	Zener power dissipation
P_{ZM}	Peak zener power dissipation
P_{ZSM}	Non-repetitive peak zener power dissipation
Q_s	Reverse recovery charge

Letter symbol	Definition
r_D	Diode (internal) series resistance
r_{DS}	Drain-source resistance
r_{GS}	Gate-source resistance
R_L	Load resistance
R_S	Source resistance
R_{th}	Thermal resistance
$R_{th\ j\text{-}a}$	Thermal resistance from junction to ambient
$R_{th\ j\text{-}mb}$	Thermal resistance from junction to mounting base
$R_{th\ j\text{-}c}$	Thermal resistance from junction to case
$R_{th\ mb\text{-}h}$	Thermal resistance from mounting base to heatsink (contact thermal resistance)
r_Z	Dynamic-slope resistance of a zener diode
S_Z	Temperature coefficient of the operating voltage of a zener diode
T_{amb}	Ambient temperature
T_{case}	Case temperature
t_d ; t_f	Delay time; fall time
t_{fr}	Forward recovery time of a diode
T_j	Junction temperature
t_{off}	Turn-off time ($t_{off} = t_s + t_f$)
t_{on}	Turn-on time ($t_{on} = t_d + t_r$)
t_r	Rise time
t_{rr}	Reverse recovery time of a diode
t_s	Storage time
T_{stg}	Storage temperature
V_{BB}, V_{CC}, V_{EE}	Supply voltage
V_{BE}, V_{CB}, V_{CE}, V_{EB}	Total value of the voltage (d.c. or average)
V_{be}, V_{cb}, V_{ce}, V_{eb}	Varying component of the voltage
v_{BE}, v_{CB}, v_{CE}, v_{EB}	Instantaneous value of the total voltage
v_{be}, v_{cb}, v_{ce}, v_{eb}	Instantaneous value of the varying component of the voltage

Letter symbols	Definition
V_{BEfl}	Base-emitter floating voltage (open base)
V_{BEsat}	Saturation voltage at specified bottoming conditions
$V_{(BR)}$	Breakdown voltage
$V_{(BR)CBO}$, $V_{(BR)CEO}$, $V_{(BR)EBO}$	Breakdown voltage between the terminal indicated by the first subscript and the reference terminal (second subscript) when the third terminal is open circuited
$V_{(BR)CER}$	Collector-emitter breakdown voltage with a specified resistance between emitter and base
$V_{(BR)CES}$	Collector-emitter breakdown voltage with the emitter short circuited to the base
V_{CBO}, V_{CEO}, V_{DGO}, V_{EBO}, V_{GSO}	Voltage of the terminal indicated by the first subscript w.r.t. the reference terminal (second subscript) with the third terminal open circuited
V_{CBOM}, V_{CEOM}	Peak value of V_{CBO}, V_{CEO}
V_{CEK}	Knee voltage at specified conditions
V_{CER}	Collector-emitter voltage with a specified resistance between emitter and base
V_{CERM}	Peak value of V_{CER}
V_{CES}	Collector-emitter voltage with the emitter short circuited to the base
V_{CEsat}	Saturation voltage at specified bottoming conditions
$V_{CE.sust}$	Collector-emitter sustaining voltage under the condition, indicated by the third subscript
V_{CEX}	Collector-emitter voltage in a specified circuit. This symbol is commonly used to indicate a reverse biased emitter junction
V_{DSS}	Drain-source voltage with the source short-circuited to the gate
V_{EBfl}	Emitter-base floating voltage (open emitter)
V_F	Continuous forward voltage of a diode
V_{FM}	Peak forward voltage of a diode

Letter symbol	Definition	
V_i, V_o	Input, respectively output voltage of a specified circuit	
$V_{(P)GS}$	Gate-source cut-off voltage	
V_R	Continuous reverse voltage of a diode	
V_{RM}	Peak reverse voltage of a diode	
V_{RSM}	**Non-repetitive** peak reverse voltage of a diode	
V_Z	Operating voltage (zener voltage) of a zener diode	
y_{ib}, y_{ie}, y_{is}	Input admittance	Output short circuited to a.c.
b_{ib}, b_{ie}, b_{is}		
g_{ib}, g_{ie}, g_{is}	Input conductance	
C_{ib}, C_{ie}, C_{is}	Input capacitance	
φ_{ib}, φ_{ie}, φ_{is}	Phase angle of input admittance	
y_{fb}, y_{fe}, y_{fs}	Transfer admittance	Output short circuited to a.c.
b_{fb}, b_{fe}, b_{fs}		
g_{fb}, g_{fe}, g_{fs}	Transfer conductance	
C_{fb}, C_{fe}, C_{fs}	Transfer capacitance	
φ_{fb}, φ_{fe}, φ_{fs}	Phase angle of transfer admittance	
y_{ob}, y_{oe}, y_{os}	Output admittance	Input short circuited to a.c.
b_{ob}, b_{oe}, b_{os}		
g_{ob}, g_{oe}, g_{os}	Output conductance	
C_{ob}, C_{oe}, C_{os}	Output capacitance	
φ_{ob}, φ_{oe}, φ_{os}	Phase angle of output admittance	
y_{rb}, y_{re}, y_{rs}	Feedback admittance	Input short circuited to a.c.
b_{rb}, b_{re}, b_{rs}		
g_{rb}, g_{re}, g_{rs}	Feedback conductance	
C_{rb}, C_{re}, C_{rs}	Feedback capacitance	
φ_{rb}, φ_{re}, φ_{rs}	Phase angle of feedback admittance	
Z_{th}	Transient thermal **impedance**	

Low frequency transistors

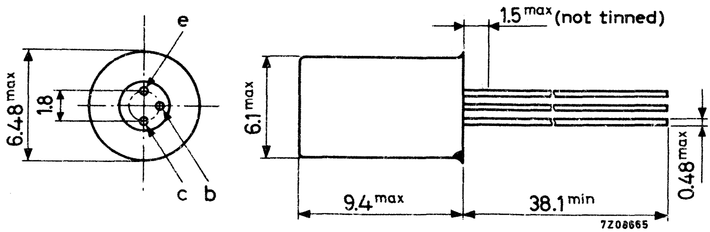
GERMANIUM ALLOY TRANSISTOR

P-N-P transistor in a TO-1 metal envelope intended for use in pre-amplifier or driver stages.

QUICK REFERENCE DATA				
Collector-base voltage (open emitter)	$-V_{CBO}$	max.	32	V
Collector-emitter voltage (open base)	$-V_{CEO}$	max.	12	V
Collector current (d.c.)	$-I_C$	max.	100	mA
Total power dissipation up to T_{amb} = 45 °C with cooling fin No. 56227 on a heatsink of at least 12.5 cm^2	P_{tot}	max.	500	mW
Junction temperature	T_j	max.	90	°C
D.C. current gain at T_{amb} = 25 °C				
$-I_C$ = 2 mA; $-V_{CE}$ = 5 V	h_{FE}	>	50	
		typ.	100	
Small signal current gain at T_{amb} = 25 °C				
I_E = 2 mA; $-V_{CB}$ = 5 V; f = 1 kHz	h_{fe}	typ.	125	
			80 to 170	
Transition frequency				
$-I_C$ = 10 mA; $-V_{CE}$ = 2 V	f_T	typ.	1.7	MHz

MECHANICAL DATA Dimensions in mm

TO-1



The coloured dot indicates the collector

Accessories available: 56200, 56208, 56209, 56210, 56226, 56227

RATINGS (Limiting values) [1])

Voltages

Collector-base voltage (open emitter)	$-V_{CBO}$	max.	32	V
Collector-emitter voltage (open base)	$-V_{CEO}$	max.	12	V
Collector-emitter voltage with $R_{BE} < 1\ k\Omega$	$-V_{CER}$	max.	32	V
Emitter-base voltage (open collector)	$-V_{EBO}$	max.	10	V

Currents

Collector current (d.c.)	$-I_C$	max.	100	mA
Emitter current (peak value)	I_{EM}	max.	200	mA

Power dissipation

Total power dissipation up to $T_{amb} = 45\ ^oC$ with cooling fin No. 56227 mounted on a heatsink of at least 12.5 cm^2	P_{tot}	max.	500	mW

Temperatures

Storage temperature	T_{stg}	-55 to +90		^oC
Junction temperature	T_j	max.	90	^oC

THERMAL RESISTANCE

From junction to ambient in free air	$R_{th\ j-a}$	=	0.3	$^oC/mW$
From junction to ambient with cooling fin No. 56227 mounted on a heatsink of at least 12.5 cm^2	$R_{th\ j-a}$	=	0.09	$^oC/mW$

[1]) Limiting values according to the Absolute Maximum System as defined in IEC publication 134.

CHARACTERISTICS

T_{amb} = 25 °C unless otherwise specified

Collector cut-off current				
$I_E = 0$; $-V_{CB} = 10$ V	$-I_{CBO}$	<	10	μA
$I_E = 0$; $-V_{CB} = 32$ V; $T_j = 75$ °C	$-I_{CBO}$	<	800	μA

GERMANIUM ALLOY TRANSISTORS

The AC127 is an n-p-n audio transistor in a TO-1 metal envelope.
The AC127 is intended for use together with the p-n-p transistors AC128 or AC132 as matched pair in class B output stages with complementary symmetry or in driver stages.
The AC127/01 is electrically equivalent to the AC127, constructed integrally with a heat conducting block, which gives better heat transfer.
The thermal resistance from junction to heatsink shows an improvement (≈ 10 °C/W) as compared with that obtained with the AC127 when using heat conducting clip 56227.

GERMANIUM ALLOY TRANSISTORS

The AC128 is a p-n-p audio transistor in a TO-1 metal envelope.
The AC128 is intended for use in class A or class B output stages with battery voltages up to 14 V and an output power of up to 4 W.
Type 2-AC128 consists of 2 transistors AC128 selected for operation in a low distortion class B amplifier.
The AC128/01 is electrically equivalent to the AC128, constructed integrally with a heat conducting block which gives better heat transfer.
The thermal resistance from junction to heatsink shows an improvement (≈ 10 °C/W) as compared with that obtained with the AC128 when using heat conducting clip 56227.
Type 2-AC128 and type 2-AC128/01 consist of 2 transistors AC128 and AC128/01 resp. selected for operation in a low distortion class B amplifier.

GERMANIUM ALLOYED MEDIUM POWER TRANSISTORS

The AC187 is a n-p-n audio transistor in a TO-1 metal envelope.
The AC187 is primarily intended for use together with the p-n-p medium power transistor AC188 as matched pair AC187/AC188 in class B output stages with outputs up to about 3W.
The AC187/01 is electrically equivalent to the AC187, constructed integrally with a heat conducting block, which gives better heat transfer.
The thermal resistance from junction to heatsink shows an improvement (≈10 °C/W) as compared with that of the AC187 with heat conducting clip 56227.
The AC187/01 is also available as matched pair with the AC188/01.

D.C. current gain ratio of
matched pairs AC187/AC188; AC187/01/AC188/01

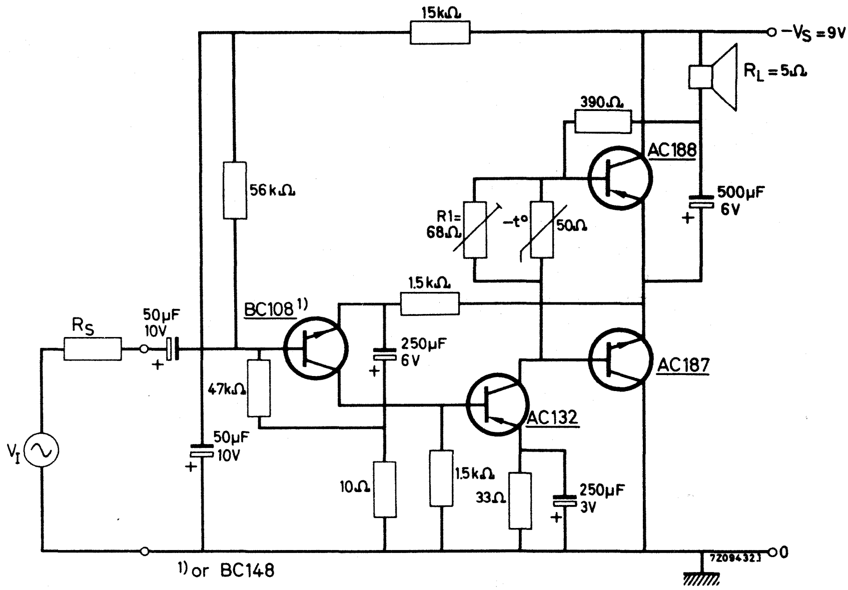
$\|I_C\|$ = 500 mA; $\|V_{CE}\|$ = 1 V	h_{FE1}/h_{FE2}	<	1.25

matched pairs 2-AC188; 2-AC188/01

$-I_C$ = 50 mA; $-V_{CE}$ = 1 V	h_{FE1}/h_{FE2}	<	1.25
$-I_C$ = 500 mA; $-V_{CE}$ = 1 V	h_{FE1}/h_{FE2}	<	1.25

APPLICATION INFORMATION

1.5 W transformerless audio frequency amplifier with matched pair AC187/AC188 in complementary symmetry class B output stage up to T_{amb} = 45 °C



Typical input requirements for an output power of 50 mW	$V_{i(rms)}$ R_i	= 4 mV; $I_{i(rms)}$ = 0.12 μA; = 33 kΩ
Typical input requirements for an output power of 1.5 W	$V_{i(rms)}$ R_i	= 22 mV; $I_{i(rms)}$ = 0.66 μA; = 33 kΩ
Typical bandwidth (3 dB); R_S = 0	B	= 60 Hz to 65 kHz
Typical bandwidth (3 dB); R_S = 50 kΩ	B	= 65 Hz to 35 kHz
Quiescent current	$\lvert I_{cq}\rvert$	= 5 mA, adjustable with R1

When using AC187 and AC188 each transistor should be mounted with cooling clip 56227 on 1.5 mm blackened Al. heatsink of 3 cm x 3 cm.
When using AC187/01 and AC188/01 each transistor should be mounted on 1.5 mm blackened Al. heatsink of 2.5 cm x 2.5 cm.

A.F. SILICON PLANAR EPITAXIAL TRANSISTORS

N-P-N transistors in a TO-18 metal envelope with the collector connected to the case; the same transistors are available in lock-fit encapsulation under the type numbers BC147 to BC149.
The BC107 is primarily intended for use in driver stages of audio amplifiers and in signal processing circuits of television receivers.
The BC108 is suitable for a multitude of low voltage applications e.g. driver stages or audio pre-amplifiers and in signal processing circuits of television receivers.
The BC109 is primarily intended for low noise input stages in tape recorders, hi-fi amplifiers and other audio frequency equipment.

Coloured dot on top of the black body

MOUNTING INSTRUCTIONS

To avoid damaging the transistor, welded or soldered connections must be made with care; the following general recommendations should be observed:

1. The temperature of the soldering iron must be less than 250 °C and the soldering time less than 3 seconds at a lead length of not less than 1.5 mm.
2. To keep the heat capacity low, the smallest possible amount of solder should be used.
3. If the plastic capsule of the transistor makes contact with any other structure, care must be taken that its temperature never exceeds 125 °C.

RATINGS Limiting values in accordance with the Absolute Maximum System (IEC 134)

A.F. SILICON PLANAR EPITAXIAL TRANSISTORS

P-N-P transistors in a TO-18 metal envelope with the collector connected to the case. The BC177 is a high voltage type and primarily intended for use in driver stages of audio amplifiers and in signal processing circuits of television receivers.
The BC178 is suitable for a multitude of low voltage applications e.g. driver stages or audio pre-amplifiers and in signal processing circuits of television receivers.
The BC179 is primarily intended for low noise input stages in tape recorders, hi-fi amplifiers and other audio frequency equipment.
Moreover they are intended as complementary types for the BC107, BC108 and BC109.

QUICK REFERENCE DATA

			BC177	BC178	BC179	
Collector-emitter voltage ($+V_{BE}$ = 1 V)	$-V_{CEX}$	max.	50	30	25	V
Collector-emitter voltage (open base)	$-V_{CEO}$	max.	45	25	20	V
Collector current (peak value)	$-I_{CM}$	max.	200	200	200	mA
Total power dissipation up to T_{amb} = 25 °C	P_{tot}	max.	300	300	300	mW
Junction temperature	T_j	max.	175	175	175	°C
Small signal current gain at T_j = 25 °C

MOUNTING INSTRUCTIONS

To avoid damaging the transistor, welded or soldered connections must be made with care; the following general recommendations should be observed:

1. The temperature of the soldering iron must be less than 250 °C and the soldering time less than 3 seconds at a lead length of not less than 1.5 mm.
2. To keep the heat capacity low, the smallest possible amount of solder should be used.
3. If the plastic capsule of the transistor makes contact with any other structure, care must be taken that its temperature never exceeds 125 °C.

A.F. SILICON PLANAR EPITAXIAL TRANSISTORS

P-N-P transistors in a plastic envelope.
The BC307 is a high voltage type and primarily intended for use in driver stages of audio amplifiers and in signal processing circuits of television receivers.
The BC308 is suitable for a multitude of low voltage applications e.g. driver stages or audio pre-amplifiers and in signal processing circuits of television receivers.
The BC309 is primarily intended for low noise input stages in tape recorders, hi-fi amplifiers and other audio frequency equipment.
Moreover they are intended as complementary types for the BC 237, BC 238 and BC 239.

QUICK REFERENCE DATA

			BC307	BC308	BC309	
Collector-emitter voltage ($+V_{BE} = 1$ V)	$-V_{CEX}$	max.	50	30	25	V
Collector-emitter voltage (open base)	$-V_{CEO}$	max.	45	25	20	V
Collector current (peak value)	$-I_{CM}$	max.	200	200	200	mA
Total power dissipation up to $T_{amb} = 25$ °C	P_{tot}	max.	300	300	300	mW
Junction temperature	T_j	max.	125	125	125	°C
Small signal current gain at $T_j = 25$ °C						
$-I_C = 2$ mA; $-V_{CE} = 5$ V; f = 1 kHz	h_{fe}	>	75	75	125

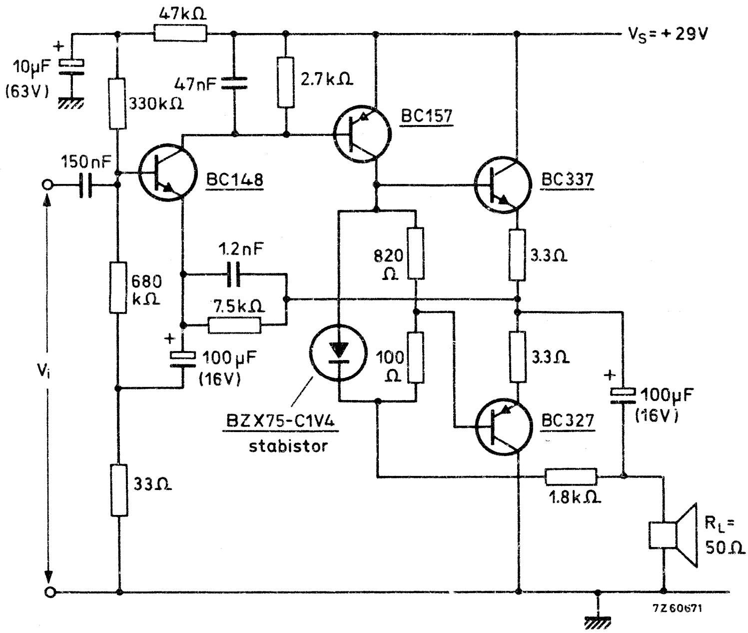
APPLICATION INFORMATION

2.2 W transformerless audio frequency amplifier with matched pair BC327/BC337 in complementary class B output stage up to T_{amb} = 50 °C.



Performance at V_S = 29 V; R_L = 50 Ω

Collector quiescent current of BC337	I_{cq}	typ.	1	mA
Input voltage for P_o = 50 mW	V_i	typ.	7	mV
Input voltage for P_o = 2 W	V_i	typ.	46	mV
Output power at f = 1 kHz; d_{tot} = 10%	P_o	typ.	2.2	W
Frequency response (3 dB)			50 to 15 000	Hz

This amplifier needs no external cooling fin, provided each output transistor is mounted with its leads not longer than 3 mm. The collector lead must, in addition, be soldered to a copper area of at least 10 mm x 10 mm. (See page 2).

N-P-N SILICON PLANAR LOW-LEVEL DUAL TRANSISTORS FOR DIFFERENTIAL AMPLIFIERS

For data of the BCY55 please refer to Handbook Part 4

SILICON PLANAR EPITAXIAL TRANSISTORS

N-P-N transistor in a TO-18 metal envelope with the collector connected to the case.
They are intended for general purpose very high gain low level and low noise applications.
Moreover, they are also suitable for low speed switching applications.

QUICK REFERENCE DATA

SWITCHING CHARACTERISTICS of the BCY70 and BCY72

Turn on time when switched to $+V_{BE}$ = 2 V to $-I_C$ = 10 mA; $-I_B$ = 1 mA

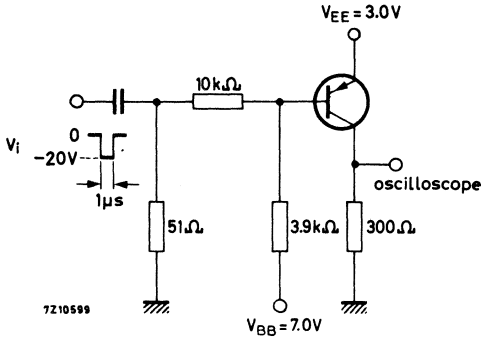
delay time	t_d	typ.	23	ns
		<	35	ns
rise time	t_r	typ.	25	ns
		<	35	ns
turn on time	t_{on}	typ.	48	ns
		<	65	ns

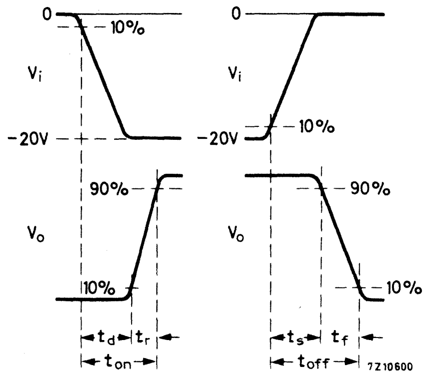
Turn off time when switched from

$-I_C$ = 10 mA; $-I_B$ = 1 mA to $+V_{BE}$ = 2 V with $+I_{BM}$ = 1 mA

storage time	t_s	typ.	270	ns
		<	350	ns
fall time	t_f	typ.	50	ns
		<	80	ns
turn off time	t_{off}	typ.	320	ns
		<	420	ns

Test circuit:





Note:

$+I_{BM}$ is the reverse current that can flow during switching off. The indicated $+I_{BM}$ is determined and limited by the applied cut-off voltage and series resistance.

Determination of total noise figure

Total noise at $f < 15$ kHz includes flicker noise and white noise. The relation is as follows:

Noise factor = 1 + flicker noise factor + white noise factor

The flicker noise factor can be derived from the curves on page 14, the white noise factor on page 15.

Example:

Assume a BCY71 operating at $f = 200$ Hz; $I_E = 200\ \mu A$ with a source resistance $R_S = 10\ k\Omega$.
From page 14 it follows that at $I_E = 200\ \mu A$ with $R_S = 10\ k\Omega$ the product of frequency and flicker noise factor is 110. Since the frequency is 200 Hz, the flicker noise factor is 110/200 = 0.55
From page 15 it follows that at $I_E = 200\ \mu A$ with $R_S = 10\ k\Omega$ the white noise figure 0.9 dB. Since 0.9 dB represents a factor of 1.23, the total noise factor = 0.55 + 1.23 = 1.78, that is 2.5 dB.

N-P-N SILICON PLANAR DUAL TRANSISTORS FOR DIFFERENTIAL AMPLIFIERS

For data of BCY87 to 89 please refer
to Handbook Part 4

P-N-P SILICON TRANSISTORS

P-N-P silicon transistors in an all-glass construction with external metal can. They are intended for use in audio amplifiers and general industrial applications.

RATINGS (Limiting values)

			BCZ10	BCZ11	BCZ12	
Collector-base voltage (open emitter)	$-V_{CBO}$	max.	25	25	60	V

AUDIO FREQUENCY PACKAGE

The package 40809 comprises 4 transistors, intended for application in audio frequency d.c.-coupled amplifiers with complementary output stages with power outputs up to 1200 mW.

The matched pair AC127/AC128 (NPN/PNP, marked 3) consists of two transistors with high values of the d.c. amplification factor h_{FE}.

The AC128 (PNP, marked 2) should be used in the drive stage.

The AC127 (NPN, marked 1) is meant for use in the pre-amplifier stage.

APPLICATIONS

On the following pages four circuits are described in detail

QUICK REFERENCE DATA

Circuit		I	II	III	IV	
Supply voltage	V_S	6	6	9	9	V
Maximum output power (d_{tot} = 10%)	$P_{o\,max}$	350	700	650	1200	mW
Required input voltage (P_o = 50 mW) [1]						
without feedback	$V_{i(rms)}$	1.8	2.1	1.0	1.2	mV
with 6 dB feedback	$V_{i(rms)}$	3.5	5.0	2.5	2.0	mV

FOR DATA OF THE INDIVIDUAL TRANSISTORS
REFER TO THE DATA SHEETS OF THE AC127 AND THE AC128

[1]) Spread of input sensitivity < 3 dB

TYPICAL OPERATION CHARACTERISTICS (f = 1 kHz)

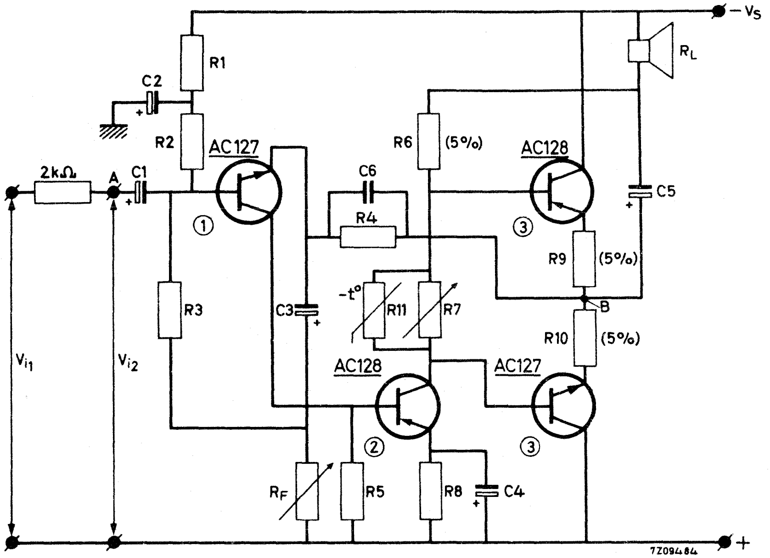
Circuit		I	II	III	IV	
Supply voltage	V_S	6	6	9	9	V
Max. output power at d_{tot} = 10%	$P_{o\ max}$	350	700	650	1200	mW
Input voltage at P_o = 50 mW						
without feedback	$V_{i(rms)}$	1.8	2.1	1.0	1.2	mV
with 6 dB feedback	$V_{i(rms)}$	3.5	5.0	2.5	2.0	mV
Input voltage at P_o = max.						
without feedback	$V_{i(rms)}$	5.3	8.6	4.6	5.6	mV
with 6 dB feedback	$V_{i(rms)}$	10.7	20.7	10.4	10.2	mV
Zero signal collector currents [1] of transistors 3	$\|I_C\|$	4	5	3	5	mA
Collector peak current at $P_{o\ max}$	I_{CM}	260	500	300	470	mA
Collector current of the driver transistor 2	$-I_C$	4.6	8.3	5.4	7.7	mA
Midtap voltage at B	V	3.3	3.6	4.9	4.9	V
Typical input resistance at A						
without feedback	R_i	3.8	6.0	3.3	2.8	kΩ
with 6 dB feedback	R_i	7.3	11.5	6.4	4.3	kΩ

Stable continuous operation is ensured up to T_{amb} = 45 °C, provided the output transistors are mounted as indicated in the following table

	I	II	III	IV
AC127	A	C	B	C
AC128	A	A	A	B

A = without cooling fin or heatsink in free air
B = with cooling fin (Type No.56227)
C = with cooling fin (Type No.56227) mounted on a 1.5 mm aluminium heatsink of at least 12.5 cm^2

[1] To be adjusted with R7



List of components

Circuit	I	II	III	IV

AUDIO FREQUENCY PACKAGE

The package 40819 comprises 4 transistors, selected on h_{FE} to give a low quiescent current of the driver stage and a low gain spread.

The package contains:

AC187 - pre-amplifier transistor
AC188 - driver transistor
AC187/01 and AC188/01-complementary output transistors.

QUICK REFERENCE DATA

The transistors are coded in red with the numerals given below.

Type number	code numeral	h_{FE} at I_C = 500 mA V_{CE} = 1 V	envelope	function
AC187	1	100 to 200	TO-1	pre-amplifier
AC188	2	100 to 200	TO-1	driver
AC187/01	3	150 to 500	cooling block	output stage
AC188/01	3	150 to 500	cooling block	output stage

APPLICATION INFORMATION

T_{amb} = 25 °C

Package 40819 in a.f. amplifier

Circuit		I	II	
Supply voltage	V_S	6	15	V
Max. output power at d_{tot} = 10 %	P_{omax}	1	3	W
Input voltage at P_o = 50 mW				
without feedback	$V_{i(rms)}$		0.7	mV
with feedback	$V_{i(rms)}$	10	1.2	mV
Input voltage at $P_o = P_{omax}$				
without feedback	$V_{i(rms)}$		5.5	mV
with feedback	$V_{i(rms)}$	41	10	mV
Zero signal collector current of transistors 3 (adjusted with R8)	$\lvert I_C \rvert$	5	5	mA
Collector current (peak value) at $P_o = P_{omax}$ of transistors 3	I_{CM}	710	750	mA
Collector current of the driver transistor 2	$-I_C$	10	9	mA
Midtap voltage at point A	V	3.2	8	V
Typical input resistance at point B				
without feedback	R_i		7	kΩ
with feedback	R_i	8	11	kΩ

Notes

1. Stable continuous operation is ensured up to T_{amb} = 45 °C, provided the output transistors are mounted as specified below:

   Circuit I:
   For the AC187/01 and AC183/01 the Al. blackened heatsinks should have an area of approximately 5 cm^2 and a thickness of 1.5 mm.

   Circuit II:
   For the AC187/01 the Al. blackened heatsink should have an area of approximately 65 cm^2 and a thickness of 1.5 mm.
   For the AC188/01 the Al. blackened heatsink should have an area of approximately 20 cm^2 and a thickness of 1.5 mm.

2. Figures and curves are typical ones unless otherwise specified.

3. A.C. information is given at f = 1 kHz unless otherwise specified.

Low frequency power transistors

GERMANIUM ALLOYED POWER TRANSISTORS

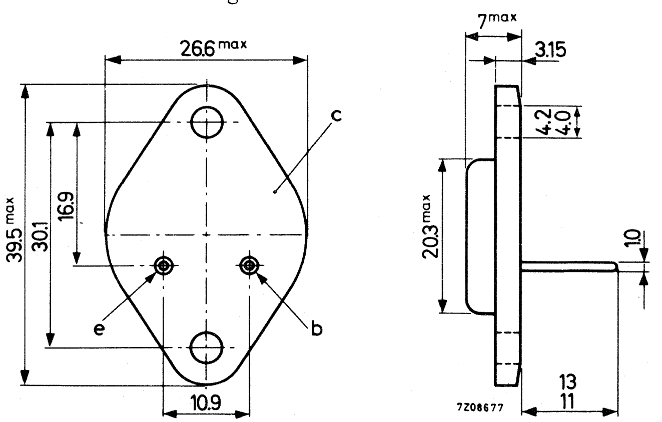
P-N-P power transistor in a metal envelope with the collector connected to the mounting base.
It is primarily intended for use as matched pair 2-AD149 in class B push-pull output stages with an output power of up to 20 W.

QUICK REFERENCE DATA				
Collector-base voltage (open emitter)	$-V_{CBO}$	max.	50	V
Collector-emitter voltage (open base)	$-V_{CEO}$	max.	30	V
Collector current (d.c.)	$-I_C$	max.	3.5	A
Total power dissipation up to T_{mb} = 45 °C	P_{tot}	max.	32.5	W
Junction temperature (incidentally)	T_j	max.	110	°C
D.C. current gain at T_j = 25 °C				
$-I_C$ = 1 A; V_{CB} = 0 V	h_{FE}		30 to 100	
Cut-off frequency				
$-I_C$ = 0.5 A; $-V_{CE}$ = 2 V	f_{hfe}	typ.	10	kHz

MECHANICAL DATA

Dimensions in mm

Collector connected to mounting base



Accessories available: 56201

RATINGS (Limiting values) [1])

Voltages

Collector-base voltage (open emitter)	$-V_{CBO}$	max.	50	V
Collector-emitter voltage (open base)	$-V_{CEO}$	max.	30	V
Collector-emitter voltage with $R_{BE} < 175\ \Omega$	$-V_{CER}$	max.	50	V
Emitter-base voltage (open collector)	$-V_{EBO}$	max.	20	V

Currents

Collector current (d.c.)	$-I_C$	max.	3.5	A
Base current (d.c.)	$-I_B$	max.	0.5	A

Power dissipation

Total power dissipation up to T_{mb} = 45 °C	P_{tot}	max.	32.5	W

Temperatures

Storage temperature	T_{stg}		-65 to +100	°C
Junction temperature: continuous	T_j	max.	100	°C
incidentally	T_j	max.	110	°C

THERMAL RESISTANCE

From junction to mounting base	$R_{th\ j\text{-}mb}$	=	2	°C/W
From mounting base to heatsink with mica washer and insulating bush	$R_{th\ mb\text{-}h}$	=	0.5	°C/W
without insulating materials and with lead washer	$R_{th\ mb\text{-}h}$	=	0.2	°C/W

[1]) Limiting values according to the Absolute Maximum System as defined in IEC publication 134.

CHARACTERISTICS $T_j = 25\ ^oC$ unless otherwise specified

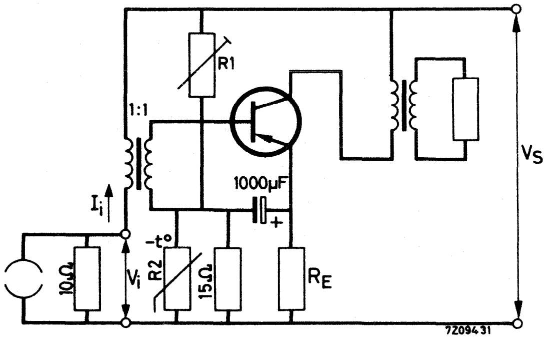
1) $\lambda_{3A} = \dfrac{A_i \text{ at } -I_C = 3\text{ A}}{A_{i\,max}}$

APPLICATION INFORMATION

AD149 in a class A output amplifier.



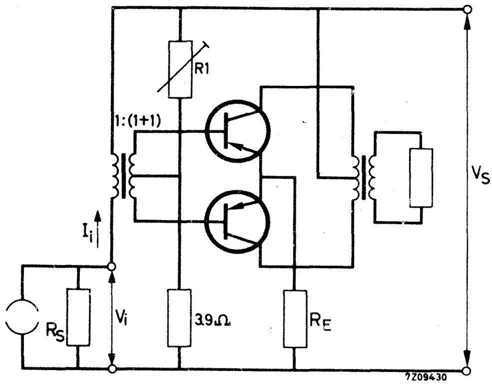
Stable continuous operation is ensured at an ambient temperature up to 55 °C provided each transistor is mounted on a 1.5 mm copper heatsink of at least 18 cm x 18 cm (circuit I) or 15 cm x 15 cm (circuit II).

Characteristics			I	II	
Supply voltage	V_S	=	7	14	V
		<	8	16	V
Collector current (zero signal)	$-I_C$	=	1.8	0.72	A
Bias resistor	R1	=	50	200	Ω
NTC resistor [1]	R2	=	50	50	Ω
Emitter resistor	R_E	=	0.3	0.5	Ω
Collector resistance	$R_{c\sim}$	=	4	23	Ω
Total power dissipation of the transistor	P_{tot}	<	4.3	4.1	W
Output power delivered to transformer	P_o	<	4	4	W
Input voltage (peak value) at P_o = 4 W	V_{IM}	typ.	0.48	0.40	V
Input current (peak value) at P_o = 4 W	I_{IM}	typ.	35	12	mA
Total distortion at P_o = 4 W	d_{tot}	typ.	9.5	7.5	%
Input current (peak value) at P_o = 50 mW	I_{IM}	typ.	2.5	1.0	mA
Total distortion at P_o = 50 mW	d_{tot}	typ.	2.5	1.5	%

[1]) NTC resistor should be mounted on the heatsink, close to the transistor.
Code number 2322 610 11509.

APPLICATION INFORMATION

2-AD149 in a class B output amplifier.



Stable continuous operation is ensured at an ambient temperature up to 55 °C provided each transistor is mounted on a 1.5 mm copper heatsink of at least 5 cm x 5 cm (circuit I) or 6 cm x 6 cm (circuit II).

Characteristics			I	II

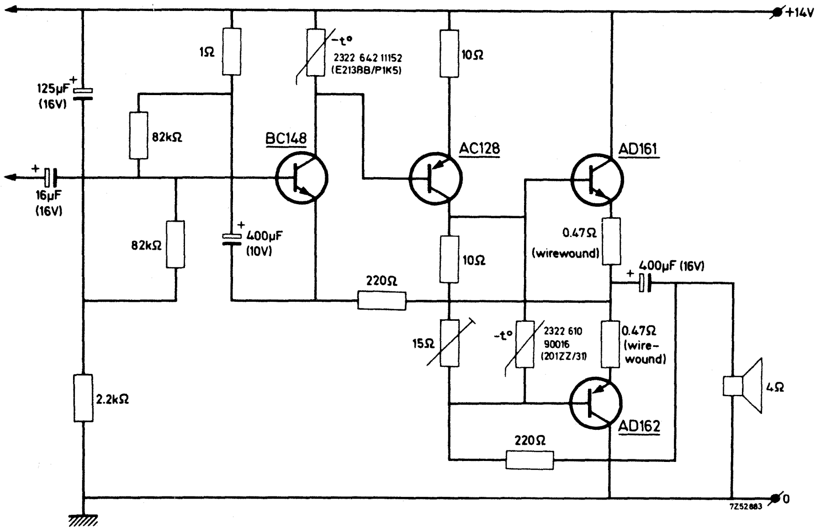
APPLICATION INFORMATION

A. 4 W car radio amplifier for 12 V

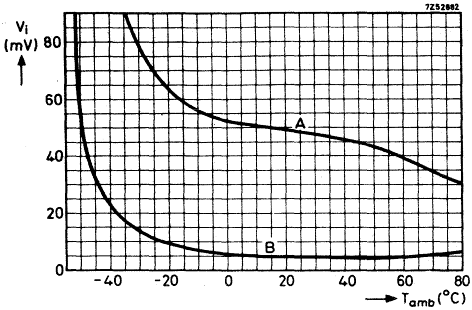


All transistors mounted on one heatsink which has a thermal resistance of $R_{th\ h\text{-}a} \leq 5.5\ ^oC/W$

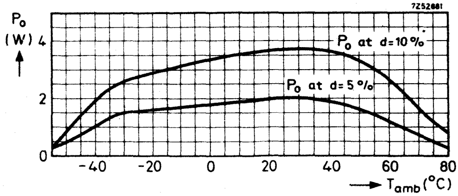
Performance at T_{amb} = 25 ^oC

Output power at d_{tot} = 10%	P_o	=	4	W
Sensitivity at P_o = 50 mW	V_i	=	5	mV
P_o = 4 W	V_i	=	48	mV
Input impedance	Z_i	=	10	kΩ
Frequency response (−3 dB)			200 Hz to 20	kHz
Operating ambient temperature	T_{amb}		20 to 70	^oC

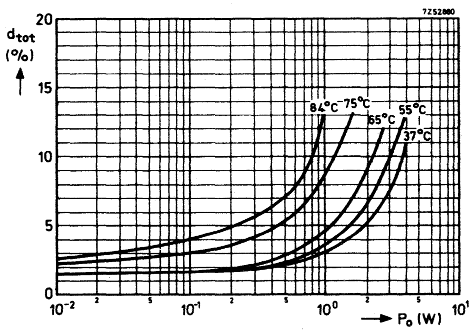
APPLICATION INFORMATION (continued)

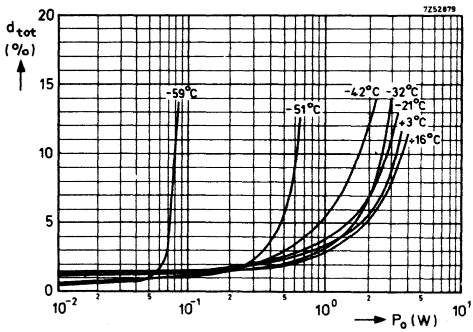


Input sensitivity at various ambient temperatures. Curve A for maximum output power at a distortion of 10%. Curve B for an output power of 50 mW.



The output power at two distortion levels as a function of the ambient temperature.

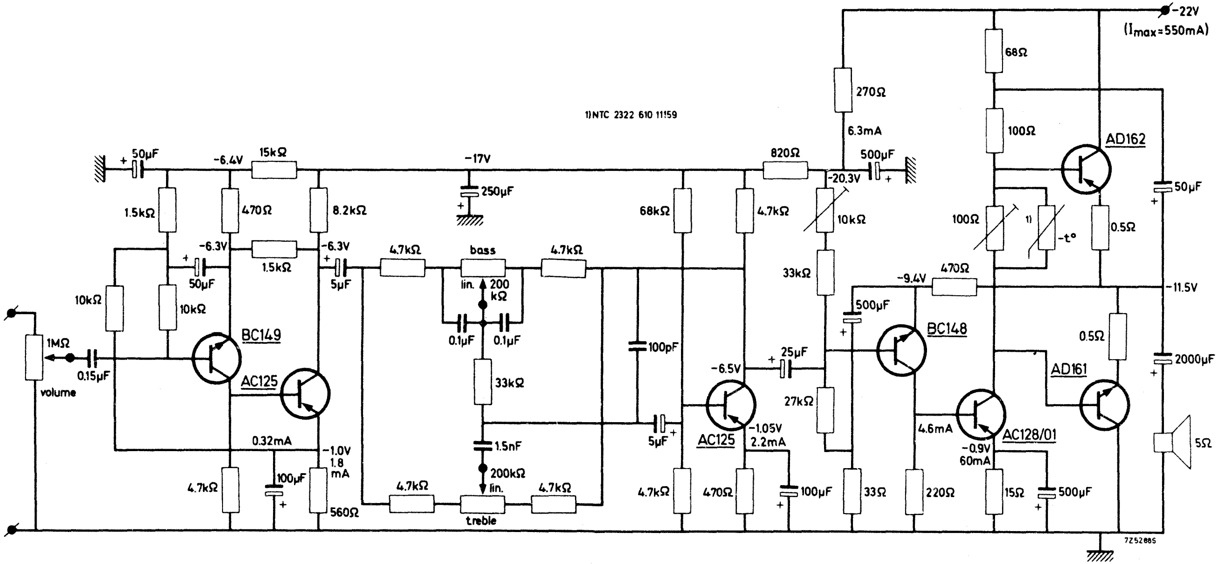




The distortion as a function of the output power at several ambient temperatures.

APPLICATION INFORMATION (continued)

B. 8 W amplifier with matched pair AD161/AD162



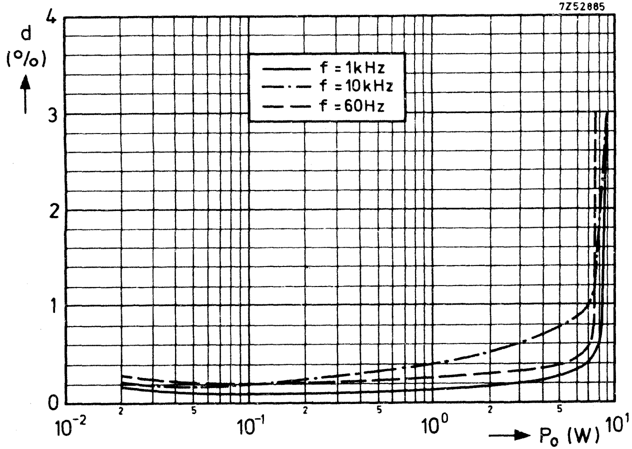
This amplifier can safely be employed up to an ambient temperature of 45 °C, provided the transistors AD161 and AD162 are mounted on a common heatsink of 200 cm^2, thickness 2 mm and the AC128/01 on a heatsink of 50 cm^2.

APPLICATION INFORMATION (continued)

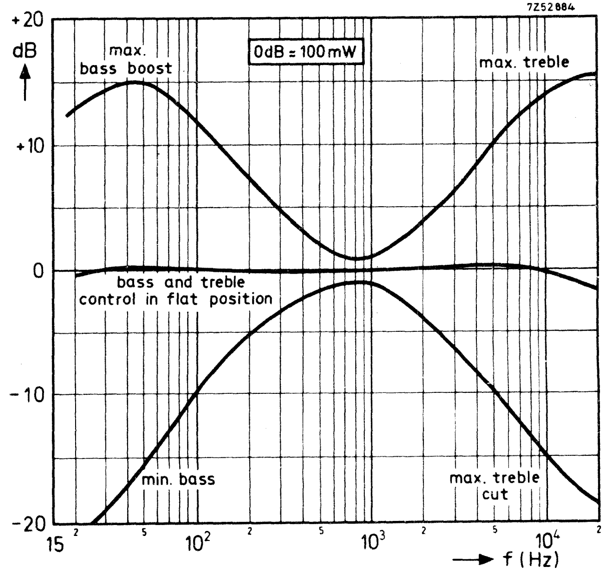
Performance

Output power at onset of clipping d_{tot} = 0.6%; f = 1 kHz	P_o	=	8	W
Sensitivity at P_o = 50 mW	V_i	=	8.7	mV
P_o = 8.7 W	V_i	=	110	mV
Input impedance	Z_i	=	500	kΩ

Signal-noise ratio at P_o = 8.7 W power supply unstabilized	S/N	=	56	dB
stabilized	S/N	=	70	dB
Frequency response (−3 dB)			20 Hz to 20	kHz
Bass control at 45 Hz			−16.5 to +15	dB
Treble control at 20 kHz			−18 to +15.5	dB



The distortion as function of the output power at three different frequencies.



Control facilities of the 8 W amplifier.

GERMANIUM ALLOYED POWER TRANSISTOR

P-N-P power transistor in a metal envelope with the collector connected to the mounting base.
It is primarily intended for use as matched pair 2-AD162 in class B push-pull output stages and together with the n-p-n power transistor AD161 as matched pair AD161/AD162 in 10 W complementary symmetry class B output stages of mains operated amplifiers and radio receivers.

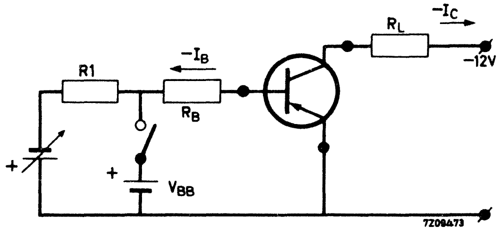
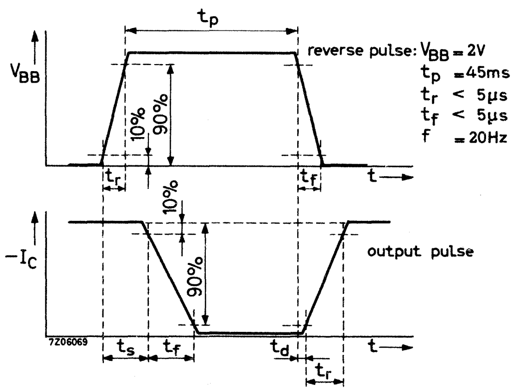
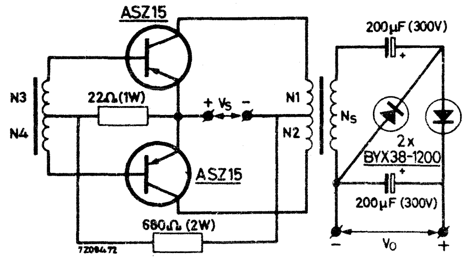
Test circuit:





APPLICATION INFORMATION

Typical operation in a d.c. to d.c. converter



The data below have been designed for continuous operation up to T_{amb} = 55 °C.
Incidentally, operation up to T_{amb} = 60 °C is permitted.
(Based on $R_{th\ j\text{-}a}$ = 15 °C/W per transistor)

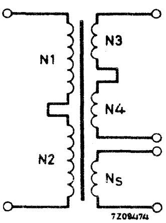
V_S	=	28	V
I_S	=	2.5	A
P_S	=	70	W
V_O	=	220	V
I_O	=	270	mA
P_O	=	60	W
η	=	86	%
f	=	450	Hz

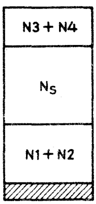
Losses

In transistors	:	2x2	W
In diodes	:	2x0.3	W
In biasing resistors	:	1.7	W
In transformer	:	3.7	W

Transformer data

The transformer core consists of square loop material
(Telcon HCR alloy type 227)
Stacking height = 15 mm





N1 + N2
N3 + N4 are bifilarly wound

N1 = N2 = 46 turns of enamelled copper wire, 1 mm

N3 = N4 = 5 turns of enamelled copper wire, 0.5 mm

N_S = 190 turns of enamelled copper wire, 0.5 mm

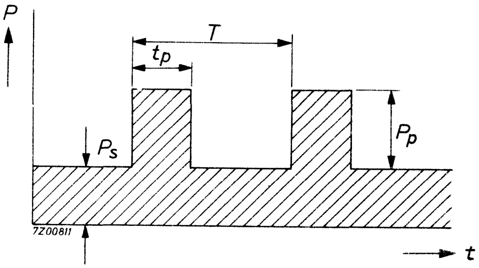
OPERATING NOTES

Determination of peak power ratings under fault conditions and/or surge operation shorter than the temperature stabilisation time

$$P_p = \frac{T_{j\,max} - T_{amb} - (R_{th\,j\text{-}mb} + R_{th\,mb\text{-}h} + R_{th\,h\text{-}a}) \cdot P_s}{R_{th\,t} + \delta . R_{th\,h\text{-}a}}$$

For a pulse duration, longer than the temperature stabilisation time

$$P_p = \frac{T_{j\,max} - T_{amb}}{R_{th\,j\text{-}mb} + R_{th\,mb\text{-}h} + R_{th\,h\text{-}a}} - P_s$$



Where:

t_p = pulse duration
T = pulse period
δ = duty cycle = t_p/T
P_s = steady state power dissipation
P_p = permissible pulse power dissipation over P_s
$R_{th\,j\text{-}mb}$ = thermal resistance from junction to mounting base
$R_{th\,mb\text{-}h}$ = thermal resistance from mounting base to heatsink
$R_{th\,h\text{-}a}$ = thermal resistance from heatsink to ambient
$R_{th\,t}$ = transient thermal resistance = f(t, δ); see page 14 (for durations longer than the temperature stabilisation time

$$R_{th\,t} = R_{th\,j\text{-}h} = R_{th\,j\text{-}mb} + R_{th\,mb\text{-}h})$$

$T_{j\,max}$ = maximum permissible junction temperature
T_{amb} = ambient temperature

Temperature stabilisation time = 1 s (see page 14)

Example: P_s = 5 W, t = 1 ms, δ = 0.1, $R_{th\,mb\text{-}h}$ = 0.5 °C/W, $R_{th\,h\text{-}a}$ = 4.25 °C/W and T_{amb} = 25 °C

From t = 1 ms and δ = 0.1 it follows that $R_{th\,t}$ = 0.28 °C/W(page 14)

$$\text{Then } P_p = \frac{90 - 25 - (1.5 + 0.5 + 4.25) \times 5}{0.28 + 0.1 \times 4.25} \approx 47.5 \text{ W}$$

NOTES

I region of permissible operation under all base-emitter conditions

II additional region of operation when the transistor is cut-off with $+V_{BE} = 2$ V

During switching-off, voltages higher than indicated by the minimum avalanche breakdown curves at $+V_{BE} = 2$ V are allowed, provided the transient energy is less than 8 mWs.

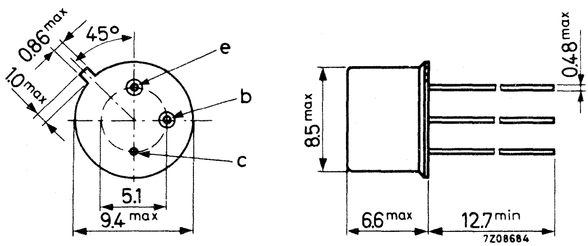
HIGH VOLTAGE SILICON TRANSISTOR

N-P-N silicon planar transistor in a TO-39 metal envelope with the collector connected to the case.
The transistor is intended for use in high voltage 2 W class A output stages of a.f. amplifiers, video amplifiers in colour television receivers including grid drive and in driver stages of high voltage line-deflection circuits.

QUICK REFERENCE DATA				
Collector-base voltage (open emitter)	V_{CBO}	max.	245	V
Collector-emitter voltage (open base)	V_{CEO}	max.	180	V
Collector current (peak value)	I_{CM}	max.	200	mA
Total power dissipation up to T_{amb} = 50 °C (device mounted on a heatsink)	P_{tot}	max.	6	W
D.C. current gain at T_j = 25 °C I_C = 50 mA; V_{CE} = 100 V	h_{FE}	> typ.	22 60	

MECHANICAL DATA Dimensions in mm

Collector connected to case
TO-39



Accessories available: 56218; 56245; 56265

RATINGS Limiting values in accordance with the Absolute Maximum System (IEC 134)

Voltages

Collector-base voltage (open emitter)	V_{CBO}	max.	245	V [1]
Collector-emitter voltage (open base) (See also page 4)	V_{CEO}	max.	180	V
Collector-emitter voltage with $R_{BE} \leq 1$ kΩ	V_{CER}	max.	245	V [1]
Emitter-base voltage (open collector)	V_{EBO}	max.	5	V

Currents

Collector current (d.c.)	I_C	max.	150	mA
Collector current (peak value)	I_{CM}	max.	200	mA

Power dissipation

Total power dissipation up to T_{amb} = 50 °C mounted on a 1.5 mm Al. blackened heatsink of at least 30 cm^2 (See also page 4)	P_{tot}	max.	6	W

Temperatures

Storage temperature	T_{stg}		-55 to +200	°C
Junction temperature	T_j	max.	200	°C

THERMAL RESISTANCE

From junction to ambient in free air	$R_{th\ j\text{-}a}$	=	200	°C/W
From junction to mounting base	$R_{th\ j\text{-}mb}$	=	12.5	°C/W
From junction to ambient mounted on a 1.5 mm blackened aluminium heatsink of at least 30 cm^2	$R_{th\ j\text{-}a}$	=	25	°C/W

[1] During switching on, a supply voltage of 1.2 times the rated V_{CER} value is permitted. The current must be limited so that maximum dissipation and maximum junction temperature are not exceeded.

CHARACTERISTICS T_j = 25 °C unless otherwise specified

Collector cut-off current				
$I_E = 0$; $V_{CB} = 200$ V; $T_j = 200$ °C	I_{CBO}	typ.	550	μA

$I_C = 0$; $V_{EB} = 5$ V	I_{EBO}	<	100	μA
Base-emitter voltage [1]				
$I_C = 50$ mA; $V_{CE} = 100$ V	V_{BE}	<	1	V
Saturation voltage				
$I_C = 100$ mA; $I_B = 10$ mA	V_{CEsat}	typ.	6.5	V
		<	9	V
High frequency knee voltage at T_j = 150 °C				
$I_C = 60$ mA	V_{CEK}	typ.	20	V

The high frequency knee voltage of a transistor is that value of the collector-emitter voltage at which the small signal gain, measured in a practical circuit, has dropped to 80% of the gain at V_{CE} = 50 V. A further decrease of the collector-emitter voltage results in a rapid increase of the distortion of the signal.

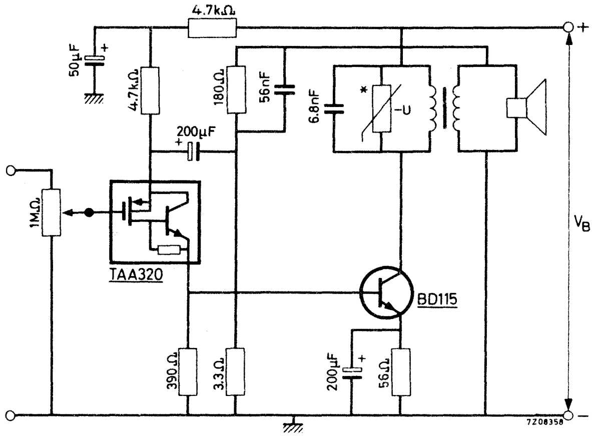
APPLICATION INFORMATION 2 W audio amplifier with TAA320 and BD115



(* The voltage dependent resistor (2322 552 03381) suppresses voltage transients that might otherwise exceed the safe operating limits of the BD115.)

Supply voltage	V_B		100	V
Collector current of BD115	I_C	typ.	50	mA
Drain current of TAA320	$-I_D$	typ.	9.5	mA
Primary d.c. resistance of output transformer			140	Ω
Primary inductance of output transformer			2.7	H
A.C. collector load for BD115			1.8	kΩ

Performance at f = 1 kHz; feedback = 16 dB

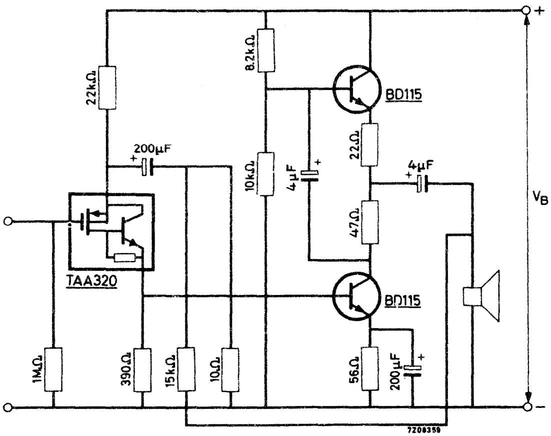
Output power at d_{tot} = 10% (on primary of the output transformer)	P_o	typ.	2.6	W
Input voltage for P_o = 50 mW	$V_{i(rms)}$	typ.	13.5	mV
Input voltage for P_o = 2 W	$V_{i(rms)}$	typ.	86	mV
Total distortion at P_o = 2 W	d_{tot}	typ.	3.6	%
Frequency response (-3 dB)			60 Hz to 20	kHz
Signal-noise ratio at P_o = 2 W		typ.	73	dB

Mounting instruction for BD115

Proper continuous operation is ensured up to T_{amb} = 50 °C, provided the BD115 is directly mounted on a 1.5 mm blackened Al. heatsink of 30 cm^2 with a clamping washer of type 56218.
If the transistor is mounted on a heatsink with a mica washer, the heatsink should have an area of 50 cm^2.
Recommended diameter of hole in heatsink: 7.7 mm.

APPLICATION INFORMATION (continued)

4 W audio amplifier with TAA320 and 2 transistors of type BD115.

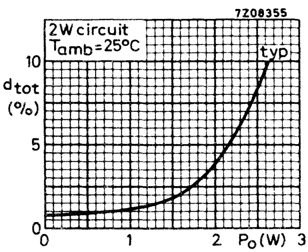


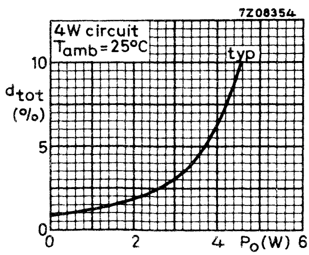
Supply voltage	V_B		200	V
Collector current of a BD115	I_C	typ.	52	mA
Drain current of TAA320	$-I_D$	typ.	8.6	mA

Performance at f = 1 kHz; feedback = 12 dB

Output power at d_{tot} = 10%	P_o	typ.	4.5	W
Input voltage for P_o = 50 mW	$V_{i(rms)}$	typ.	7.5	mV
Input voltage for P_o = 4 W	$V_{i(rms)}$	typ.	67	mV
Total distortion at P_o = 4 W	d_{tot}	typ.	6	%
Frequency response (-3 dB)		50 Hz to	20	kHz
Signal-noise ratio at P_o = 4 W		typ.	73	dB

Mounting instruction for BD115 see page 8

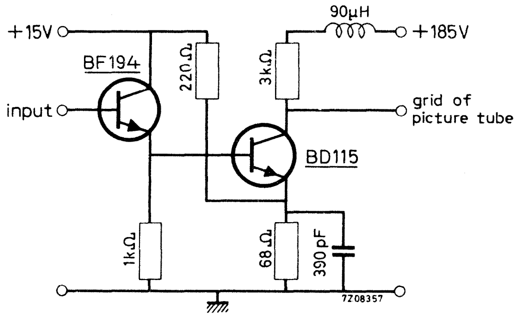




APPLICATION INFORMATION (continued)

Grid-driver circuit for colour picture tubes.

Three identical circuits are used for the red, green and blue signal respectively.



Performance up to T_{amb} = 55 °C

Voltage gain	G_V	60	
Output voltage (video information)	V_o	120	V
(peak-peak)	$V_{o(p-p)}$	150	V
Bandwidth (−3 dB)		> 4	MHz
Rise time	t_r	< 80	ns
Overshoot		< 5	%

Note

1. The maximum dissipation of the output transistor is 3.3 W.
   In order not to exceed the junction temperature rating, the thermal resistance from junction to ambient should be: $R_{th\ j-a}$ < 45 °C/W.
   To ensure the above mentioned performance for bandwidth and transient response, the contribution of the heatsink to the total output capacitance of the device should not exceed 4 pF.

2. For grid drive of the picture tube, the sync pulses must be negative going.
   To avoid driving the output transistor into the high frequency knee voltage, the sync pulses must be clipped before the output stage.

SILICON PLANAR EPITAXIAL POWER TRANSISTOR

N-P-N silicon power transistor in a metal envelope with the collector connected to the case. It is primarily intended for quasi-complementary output stages up to 15 W in audio applications, such as hi-fi amplifiers.

QUICK REFERENCE DATA				
Collector-base voltage (open emitter)	V_{CBO}	max.	70	V
Collector-emitter voltage (open base)	V_{CEO}	max.	45	V

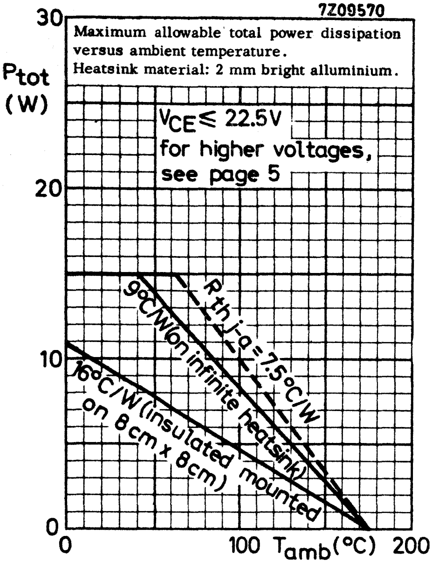
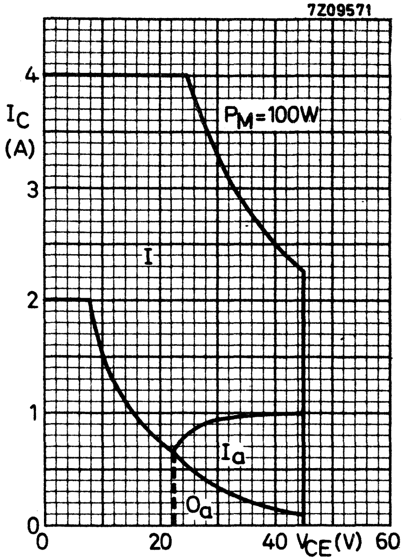
1) V_{BE} decreases by about 1.6 mV/°C with increasing temperature.





Region I: $\Delta T_{j-mb} = T_{j\ peak} - T_{mb}$ max. 115 °C

Make use of transient thermal resistance graph on page 5.

Regions O_a and I_a

To prevent damage due to second breakdown effects, transistors may only be operated in these regions if the increased thermal resistance at higher voltages is taken into account.

Region O_a: The steady state value of the thermal resistance from junction to mounting base should be multiplied by factor M taken from lower graph left hand side on page 5.

Region I_a : ΔT_{j-mb} max. 115 °C
Dependent on voltage, pulse time and duty cycle, the transient thermal resistance value from junction to mounting base should be multiplied by factor M taken from lower graph left hand side on page 5.

Fig. 2d

Calculation example

Suppose a transistor is used in a switching circuit with a resistive load (fig. 1) and is switched from conditions 2V-2A to 40V-0.2A with a pulse duration t_p = 2 ms and a duty cycle δ = 0.2.
The collector-emitter voltage, the collector current and the power dissipation as a function of time are shown if figs. 2a, 2b and 2c.
From fig. 1 it follows that 4 W is continuously dissipated. This is plotted in fig. 2c.
Peak dissipations of 8 W occur in region I_a.
In fig. 2d the appropriate thermal resistance values are indicated.
The peak junction temperature is given by:

$$T_{j\ peak} = T_{mb} + P_s \times R_{th\ j\text{-}mb} + R_{th\ t'} \times \Delta P \ ^{1)}$$

$$= T_{mb} + 4 \times 7.5 + 8 \times 4$$

$$= T_{mb} + 30 + 32$$

$$= T_{mb} + 62$$

$$T_{j\ peak} - T_{mb} = 62 = \Delta T_{j\text{-}mb}$$

This is within the maximum allowable $\Delta T_{j\text{-}mb}$ of 115 °C

The graph on page 7 shows the maximum allowable peak power dissipations for various pulse durations as a function of collector-emitter voltage for a duty cycle of 0.01.

1) $R_{th\ t'} = R_{th\ t} \times M$ (for $R_{th\ t}$ see page 5)

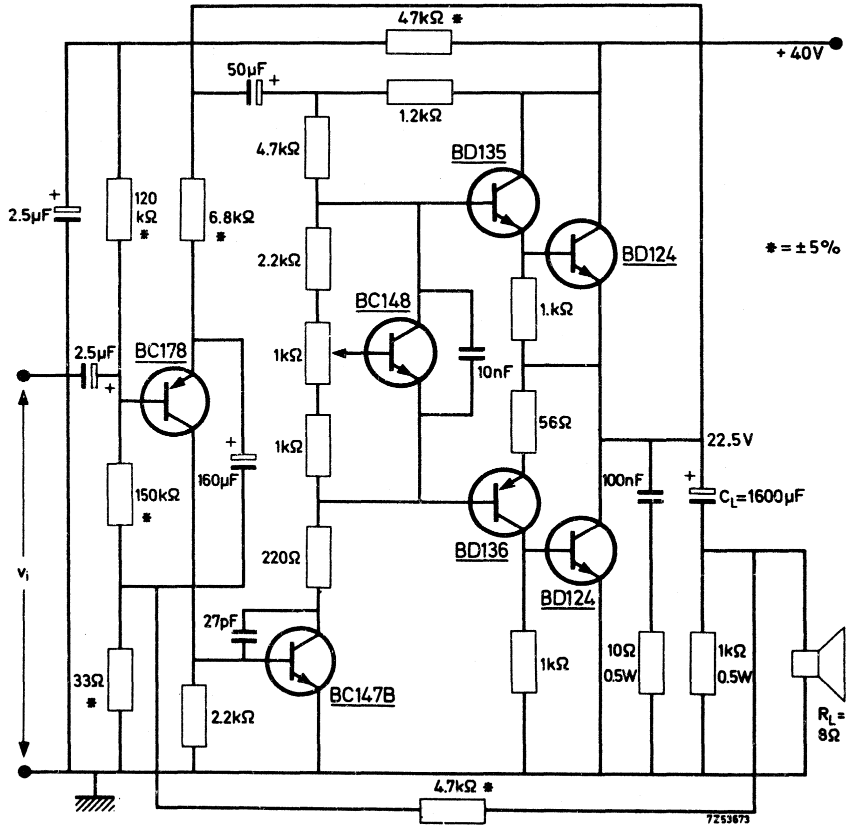
APPLICATION INFORMATION

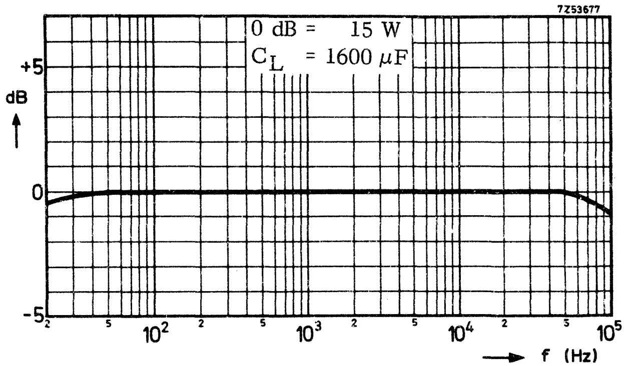
Matched pair 2-BD124 in a 15 W hi-fi audio amplifier.

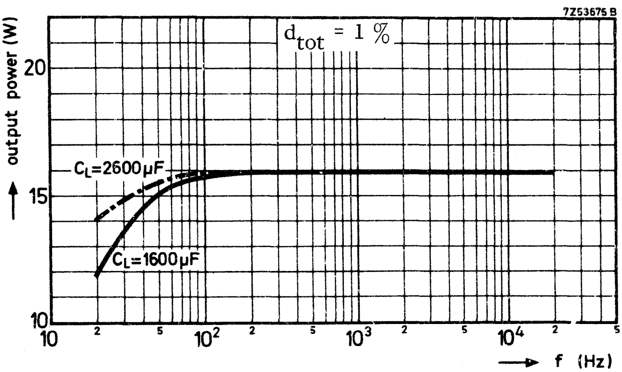


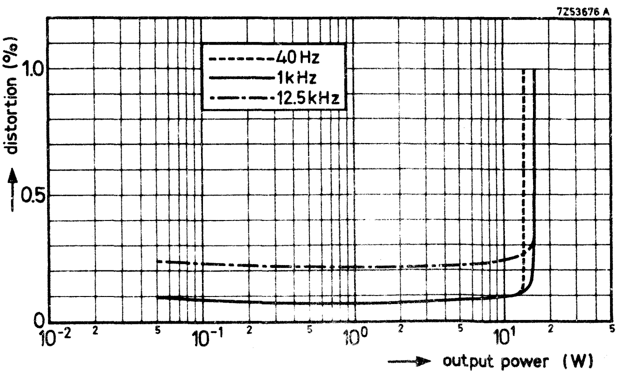
Performance

Output power at f = 1 kHz; d_{tot} = 1 %	15.8 W
Input impedance	100 kΩ
Input sensitivity (P_o = 15 W)	140 mV
Total harmonic distortion at onset of clipping (f = 1 kHz)	0.15 %
Intermodulation distortion	0.6 %
Frequency response (–1 dB)	20 Hz to 90 kHz
Supply voltage	nom. 40 V
	max. 45 V
Collector quiescent current of BD124	40 mA

APPLICATION INFORMATION (continued)







OUTPUT POWER TRANSISTOR

N-P-N transistor in a TO-126 plastic envelope. With its complement, the BD132, it is intended for complementary output stages in hi-fi amplifiers.

QUICK REFERENCE DATA				
Collector-base voltage (open emitter)	V_{CBO}	max.	70	V
Collector-emitter voltage (open base)	V_{CEO}	max.	45	V
Collector current (peak value)	I_{CM}	max.	6.0	A
Total power dissipation up to T_{mb} = 60 °C	P_{tot}	max.	11	W
Junction temperature	T_j	max.	125	°C
D.C. current gain I_C = 0.5 A; V_{CE} = 12 V	h_{FE}	>	40	
Transition frequency at f = 35 MHz I_C = 0.25 A; V_{CE} = 5 V	f_T	>	60	MHz

SILICON PLANAR EPITAXIAL TRANSISTORS

N-P-N transistors in a TO-126 plastic envelope; with their complements, the BD136 (for the BD135), the BD138 (for the BD137) and the BD140 (for the BD139), they are primarily intended for complementary driver stages in hi-fi amplifiers.
They are also recommended as single drivers where voltage and dissipation are high.
The devices are also suitable for television circuits.

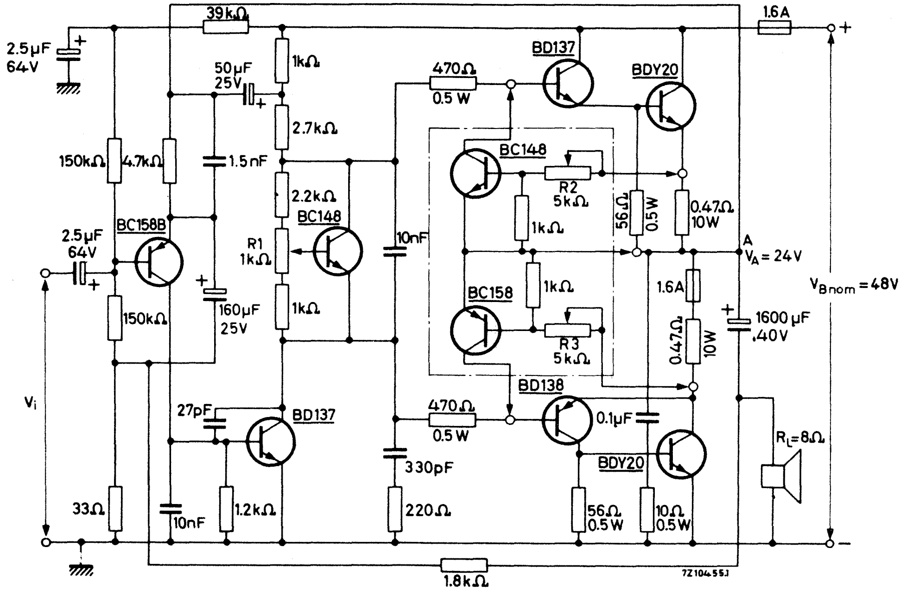
APPLICATION INFORMATION

25 W hi-fi amplifier with short circuit protection

(Broken line encloses short circuit protection)



All resistors 0.25 W unless otherwise stated.

APPLICATION INFORMATION (continued)

Performance at V_{Bnom} = 48 V; R_L = 8 Ω

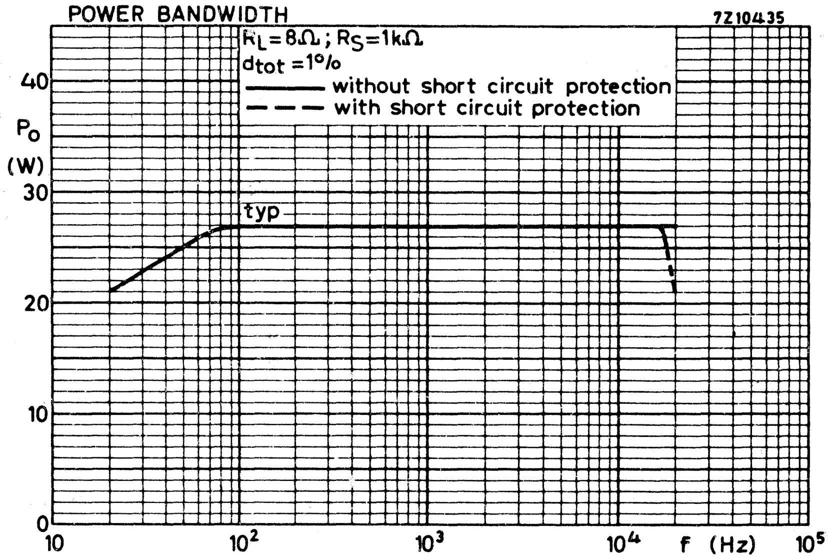
Collector quiescent current of BDY20	I_{cq}	typ.	40	mA
Total current drain at f = 1 kHz; P_o = 25 W	I_{tot}	typ.	830	mA
Input impedance	$\|Z_i\|$	typ.	150	kΩ
Output power at f = 1 kHz; d_{tot} = 1%	P_o	typ.	27	W
Input voltage for P_o = 25 W	V_i	typ.	350	mV
Total harmonic distortion at P_o = 25 W				
without protection circuit	d_{tot}	typ.	0.1	%
with protection circuit	d_{tot}	typ.	0.25	%
Intermodulation distortion at P_o = 27 W				
f_1 = 250 Hz; f_2 = 8 kHz				
V_i at f_1 : V_i at f_2 = 4 : 1				
without protection circuit	d_{im}	typ.	0.6	%
with protection circuit	d_{im}	typ.	1.2	%
Frequency response (−1 dB)			20 Hz to 35	kHz

Short circuit protection

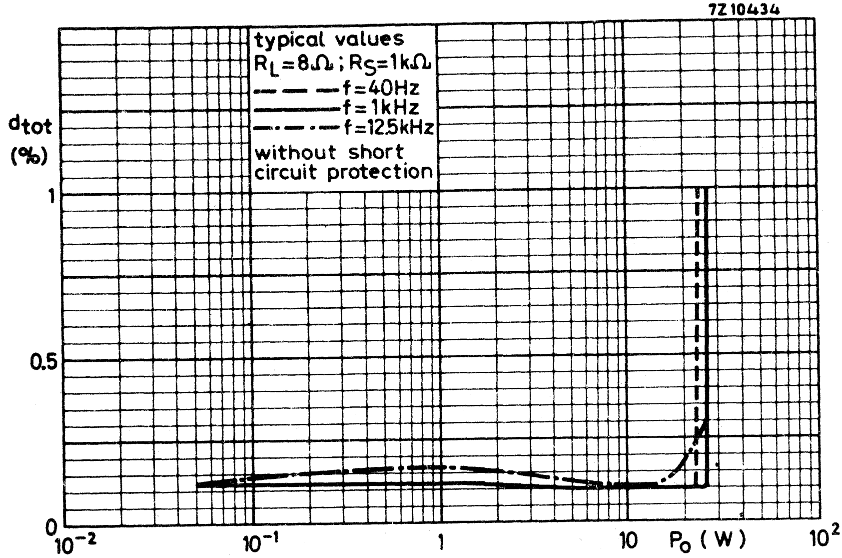
R_2 and R_3 to be adjusted so as to protect the output stage against current peaks higher than I_{CM} = 4 A.

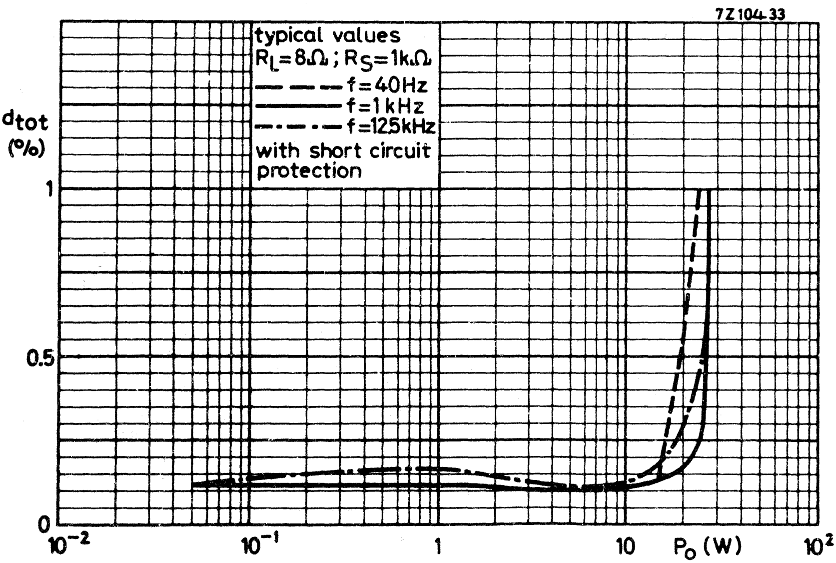
APPLICATION INFORMATION (continued)

25 W hi-fi amplifier (continued)



APPLICATION INFORMATION (continued)

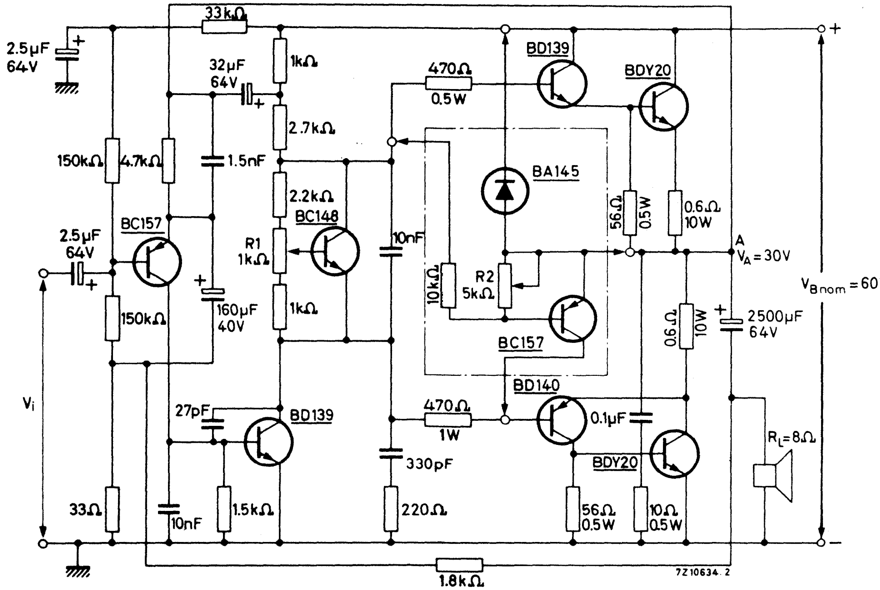




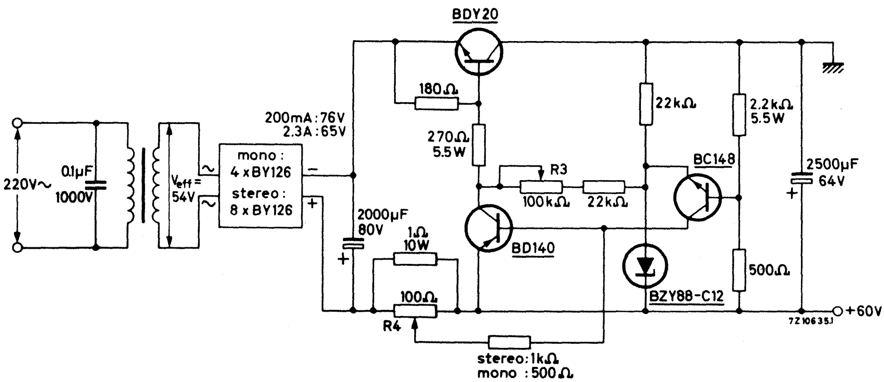
APPLICATION INFORMATION (continued)

40 W hi-fi amplifier

Together with regulated supply, part within broken lines provides short circuit protection



Short circuit protected power supply with regulated output voltage



All resistors 0.25 W unless otherwise stated.

APPLICATION INFORMATION (continued)

Performance at V_B = 60 V; R_L = 8 Ω

Collector quiescent current of BDY20	I_{cq}	typ.	40	mA
Total current drain at f = 1 kHz; P_o = 40 W	I_{tot}	typ.	1.1	A
Input impedance	$\|Z_i\|$	typ.	150	kΩ
Output power at f = 1 kHz; d_{tot} = 1%	P_o	typ.	40	W
Input voltage for P_o = 40 W	V_i	typ.	440	mV
Total harmonic distortion at P_o = 40 W	d_{tot}	typ.	0.2	%
Intermodulation distortion at P_o = P_{omax} f_1 = 250 Hz; f_2 = 8 kHz V_i at f_1 : V_i at f_2 = 4 : 1	d_{im}	typ.	0.8	%
Frequency response (−1 dB)			10 Hz to 33	kHz

Short circuit protection

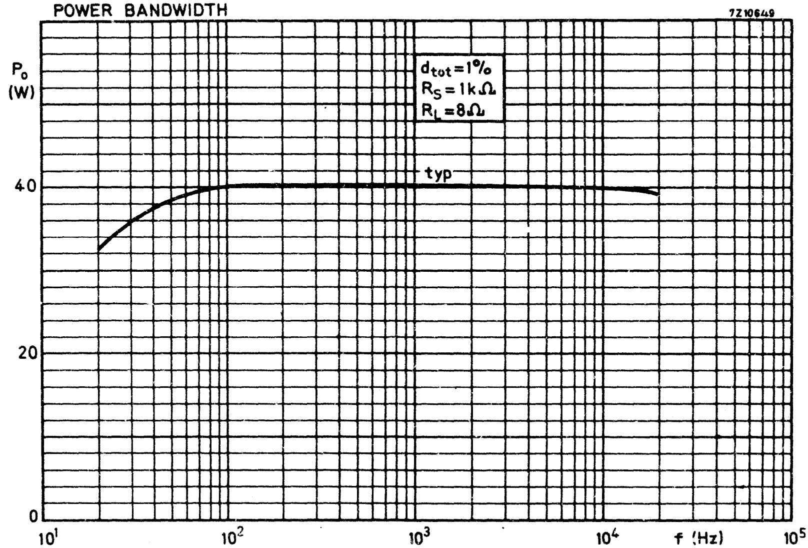
The average supply current is limited by R_4 (lower figure opposite)

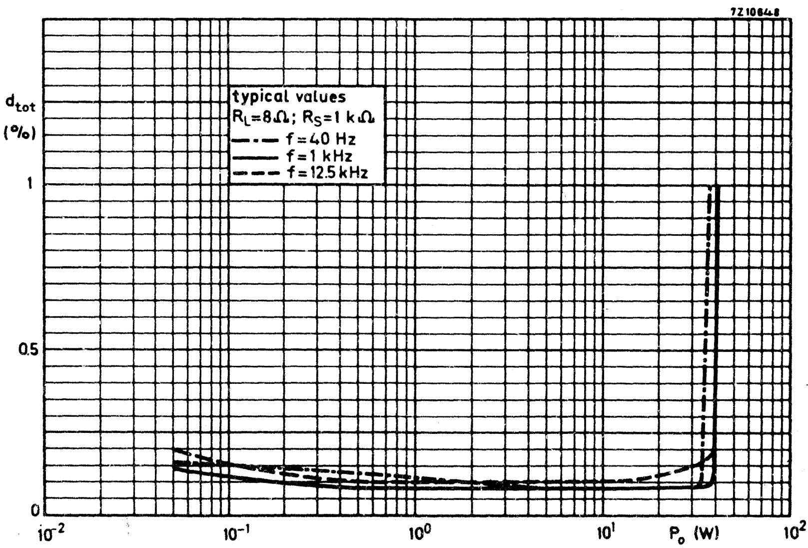
to 1.3 A for mono
or 2.3 A for stereo   where R_L = 8 Ω

R_2 is then adjusted so that the peak collector current of the lower BDY20 in the 40 W circuit is limited to I_{CM} = 4 A (normal sine wave overdrive conditions; R_L = 6 Ω).

APPLICATION INFORMATION (continued)

40 W hi-fi amplifier (continued)





SILICON PLANAR EPITAXIAL TRANSISTORS

P-N-P transistors in a TO-126 plastic envelope; with their complements, the BD135 (for the BD136), the BD137 (for the BD138) and the BD139 (for the BD140), they are primarily intended for complementary driver stages in hi-fi amplifiers.
They are also recommended as single drivers where voltage and dissipation are high. The devices are also suitable for television circuits.

AUDIO FREQUENCY POWER TRANSISTORS

N-P-N silicon diffused power transistors in a TO-3 metal envelope for use in hi-fi audio equipment.
The BD181 is intended for 20 W into 4 Ω as well as 15 W into 8 Ω.
The BD182 is intended for 40 W into 4 Ω.
The BD183 is intended for 40 W into 8 Ω.
The transistors are also available as matched pairs under the typenumbers 2-BD181, 2-BD182 and 2-BD183.

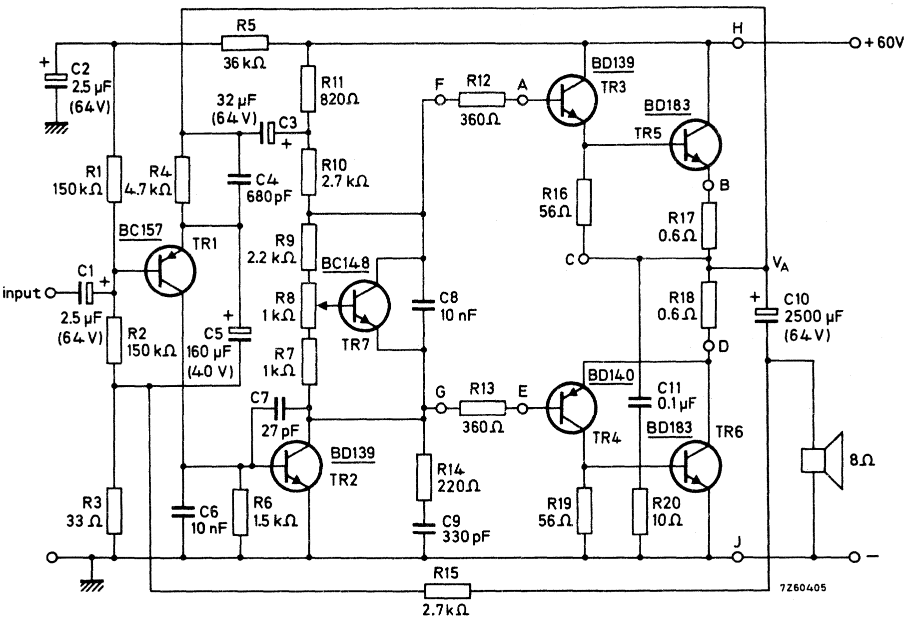
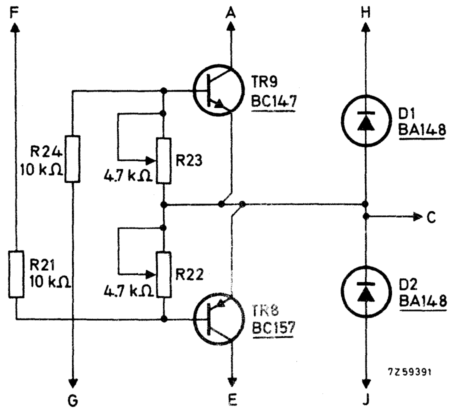
APPLICATION INFORMATION

40 W hi-fi amplifier and applicable protection circuit.



Required heatsinks:

For each output transistor (TR5 or TR6)	$R_{th\ h-a} \leq 7\ ^{o}C/W$
For each complementary transistor (TR3 or TR4)	$R_{th\ h-a} \leq 72\ ^{o}C/W$



APPLICATION INFORMATION (continued)

Performance at $V_B = 60V$; $R_L = 8\Omega$

Collector quiescent current of BD183	I_{cq}	typ.	40	mA
Total current drain at $P_L = 40$ W	I_{tot}	typ.	1.1	A
Input impedance	$\|Z_i\|$	typ.	130	kΩ
Output power at f = 1 kHz; $d_{tot} = 1\%$	P_L	>	40	W
Input voltage at f = 1 kHz; $P_L = 40$ W	V_i	typ.	350	mV
Total harmonic distortion at $P_L = 40$ W; f = 1 kHz	d_{tot}	typ.	0.27	%
Intermodulation distortion at $P_L = 40$ W				
$f_1 = 250$ Hz; $f_2 = 8$ kHz				
V_i at f_1: V_i at $f_2 = 4:1$	d_{im}	typ.	1.0	%
Frequency response (−1 dB)		10 Hz to 70 kHz		
Unweighted signal-noise ratio (ref. $P_L = 50$ mW)		>	70	dB
Internal resistance at output socket		typ.	0.08	Ω

Short circuit protection

R22 and R23 must be adjusted so that the peak collector current of each output transistor (BD183) is limited to $I_{CM} = 4.2$ A.
Adjust with 2 Ω load resistor.

APPLICATION INFORMATION (continued)

40 W hi-fi amplifier (continued)

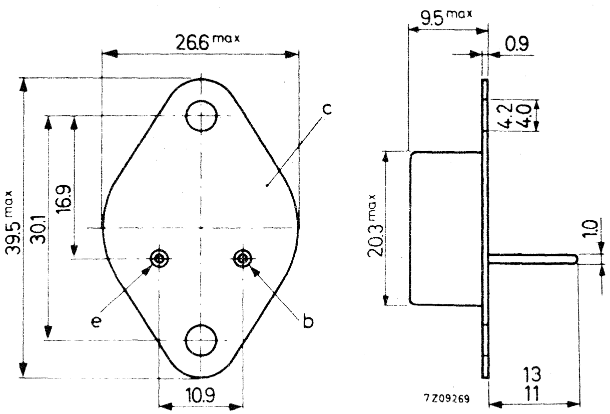
SILICON DIFFUSED POWER TRANSISTORS

N-P-N transistor in a TO-3 metal envelope, intended for use in linear applications such as hi-fi amplifiers and signal processing circuits.

QUICK REFERENCE DATA				
Collector-base voltage (open emitter)	V_{CBO}	max.	100	V
Collector-emitter voltage (open base)	V_{CEO}	max.	60	V
Collector current (peak value)	I_{CM}	max.	15	A
Total power dissipation up to T_{mb} = 25 °C	P_{tot}	max.	115	W
Junction temperature	T_j	max.	200	°C
D.C. current gain I_C = 4 A; V_{CE} = 4 V	h_{FE}	20 to	70	
Transition frequency at f = 1 MHz I_C = 1 A; V_{CE} = 4 V	f_T	typ.	1	MHz

MECHANICAL DATA Dimensions in mm

Collector connected to envelope
TO-3



Accessories available: 56201e (for insulated mounting on a 2 mm heatsink).

RATINGS Limiting values in accordance with the Absolute Maximum System (IEC134)

Voltages				
Collector-base voltage (open emitter)	V_{CBO}	max.	100	V
Collector-emitter voltage (open base)	V_{CEO}	max.	60	V [1]
Collector-emitter voltage (R_{BE} = 100 Ω)	V_{CER}	max.	70	V [1]
Emitter-base voltage (open collector)	V_{EBO}	max.	7	V
Currents				
Collector current (d.c.)	I_C	max.	15	A
Collector current (peak value)	I_{CM}	max.	15	A
Emitter current (peak value)	$-I_{EM}$	max.	15	A
Power dissipation				
Total power dissipation up to T_{mb} = 25 °C	P_{tot}	max.	115	W
Temperatures				
Storage temperature	T_{stg}		-65 to +200	°C
Junction temperature	T_j	max.	200	°C

THERMAL RESISTANCE

From junction to ambient in free air	$R_{th\ j-a}$	=	40	°C/W
From junction to mounting base	$R_{th\ j-mb}$	=	1.5	°C/W
From mounting base to heatsink	$R_{th\ mb-h}$	=	0.5	°C/W
From mounting base to heatsink with accessory 56201e	$R_{th\ mb-h}$	=	0.75	°C/W

The appropriate heatsink(s) will be found in the section HEATSINKS.

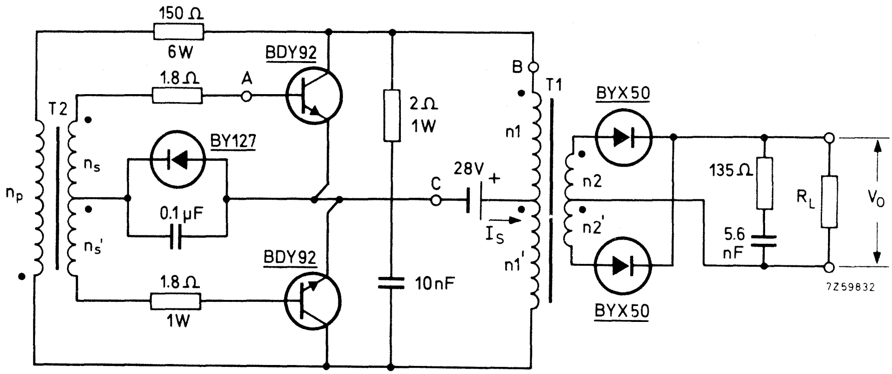
APPLICATION INFORMATION

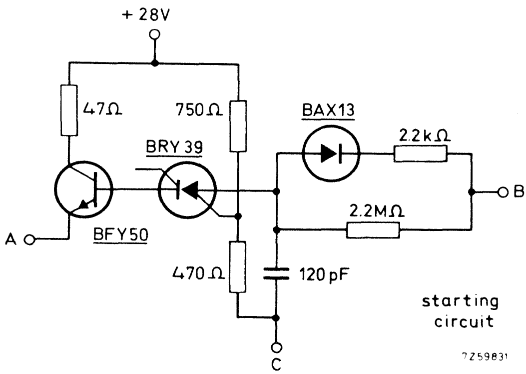
Typical operation in a 250 W d.c. to d.c. converter with two BDY92 transistors.



Each transistor is mounted on a heatsink of $R_{th\ h\text{-}a}$ = 15 °C/W

Performance at T_{amb} = 55 °C

I_S = 10.5 A
V_O = 240 V
P_O = 250 W
η = 84 %
f = 28.5 kHz



Losses at P_O = 250 W

In transistors	2 x 6 W
In diodes	2 x 2 W
In transformers	8 W
Circuit losses	14 W

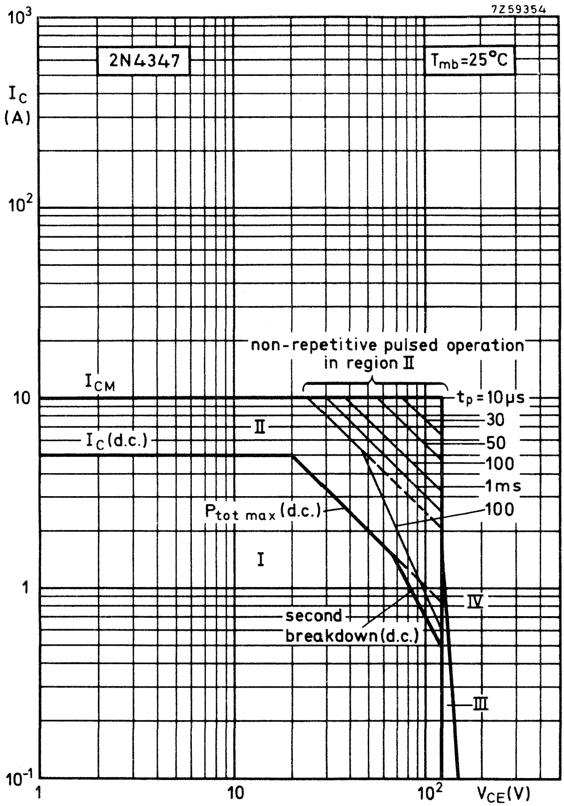
I Region of permissible operation under all base-emitter conditions and at all frequencies, including d. c.

II Permissible extension for repetitive pulsed operation and **non-repetitive** pulsed operation. For sinusoidal operation care must be taken to reduce the d. c. adjustment to region I before removing the a. c. signal. This may be achieved by an appropriate bias in class A, B or C.

III Operation during switching off in this region is allowed, provided the transistor is cut-off with $-V_{BE} \leq 1.5$ V; $I_{CM} < 1.5$ A.

IV Operation during switching off is allowed provided the transistor is cut-off with $-V_{BE} \leq 1.5$ V and the transient energy does not exceed 30 mWs.



I Region of permissible operation under all base-emitter conditions and at all frequencies, including d.c.

II Permissible extension for repetitive pulsed operation and non-repetitive pulsed operation. For sinusoidal operation care must be taken to reduce the d.c. adjustment to region I before removing the a.c. signal. This may be achieved by an appropriate bias in class A, B or C.

III Operation during switching off in this region is allowed, provided the transistor is cut-off with $-V_{BE} \leq 1.5$ V; $I_{CM} < 1.5$ A.

IV Operation during switching off is allowed provided the transistor is cut-off with $-V_{BE} \leq 1.5$ V and the transient energy does not exceed 30 mWs.

APPLICATION INFORMATION

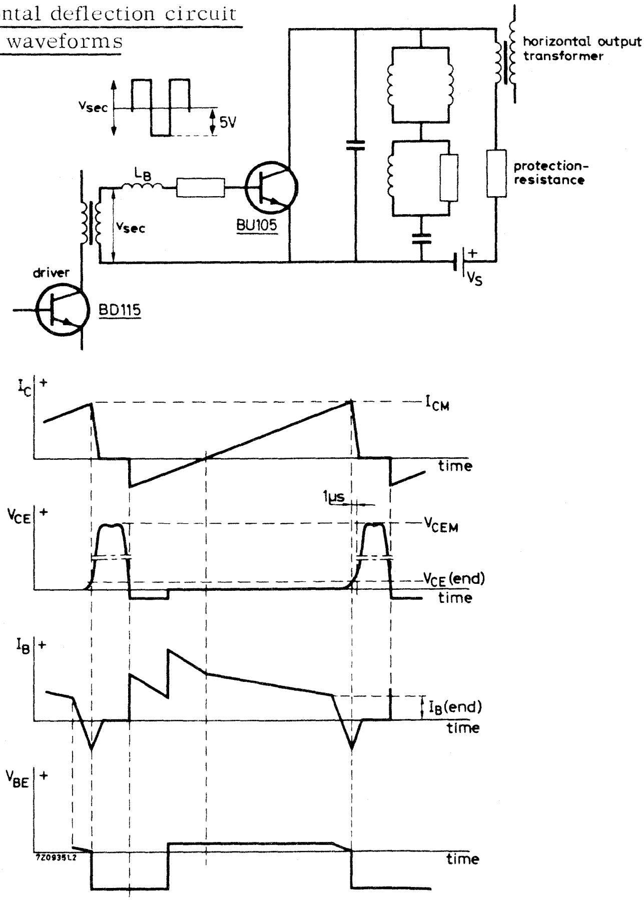
Safety margins on I_{CM} and V_{CEM}

Because of component tolerances and supply voltage variations the values of I_{CM} and V_{CEM} encountered in a practical horizontal deflection output stage will usually differ from those of a nominal circuit under nominal conditions; the difference can be as much as 25% if a stabilized supply is used, or 35% for an unstabilized supply. For this reason, the nominal values of I_{CM} and V_{CEM} should be at least 25% (35% if the supply is unstabilized) below the absolute maximum ratings.

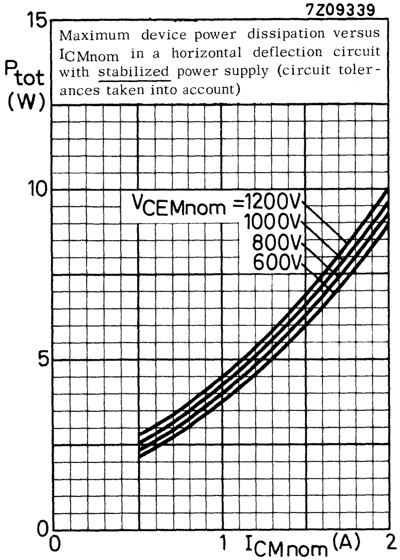
Simplified horizontal deflection circuit with fundamental waveforms

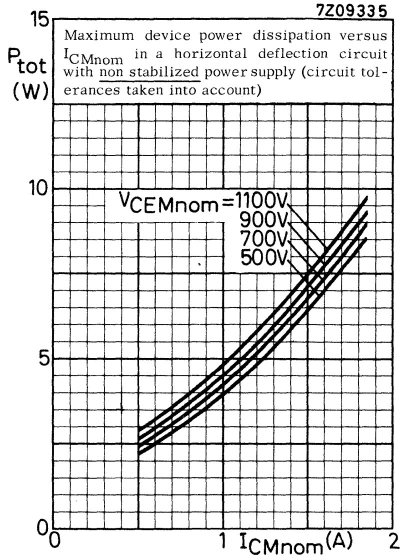


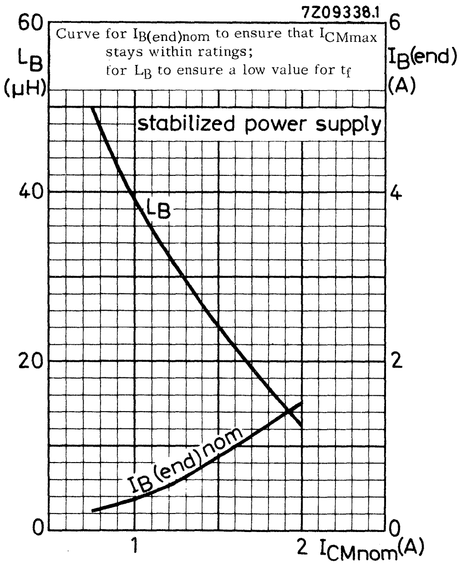
Remark:

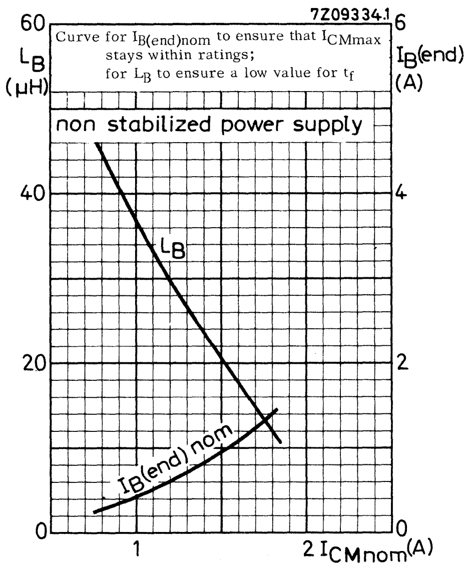
1. The driver and output stage should operate in a non-simultaneous mode i.e. the driver transistor should be conductive during flyback and the first part of scan.
2. The reverse bias voltage for the output transistor should be in the order of 5 V with a duty cycle $\delta \approx 0.5$.

APPLICATION INFORMATION (continued)

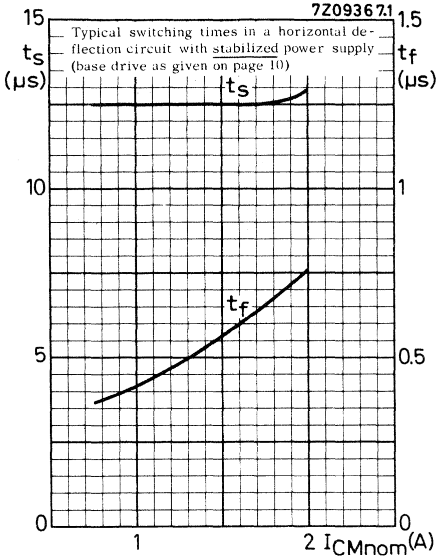


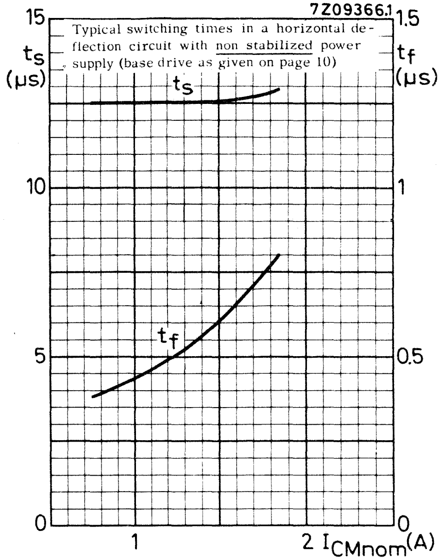






APPLICATION INFORMATION (continued)





EXAMPLE

Assuming a practical horizontal deflection output stage with
I_{CMnom} = 1.8 A and V_{CEMnom} = 1000 V
The following values will be derived from the curves:

a. Power dissipation

The maximum device power dissipation will be:
with stabilized power supply : P_{totmax} = 8.3 W
non stabilized power supply : P_{totmax} = 9.2 W

b. Maximum values (with safety margins as given on page 9)

with stabilized power supply : I_{CMmax} = 2.25 A; V_{CEM} = 1250 V
non stabilized power supply : I_{CMmax} = 2.4 A; V_{CEM} = 1350 V

c. Recommended nominal values are:

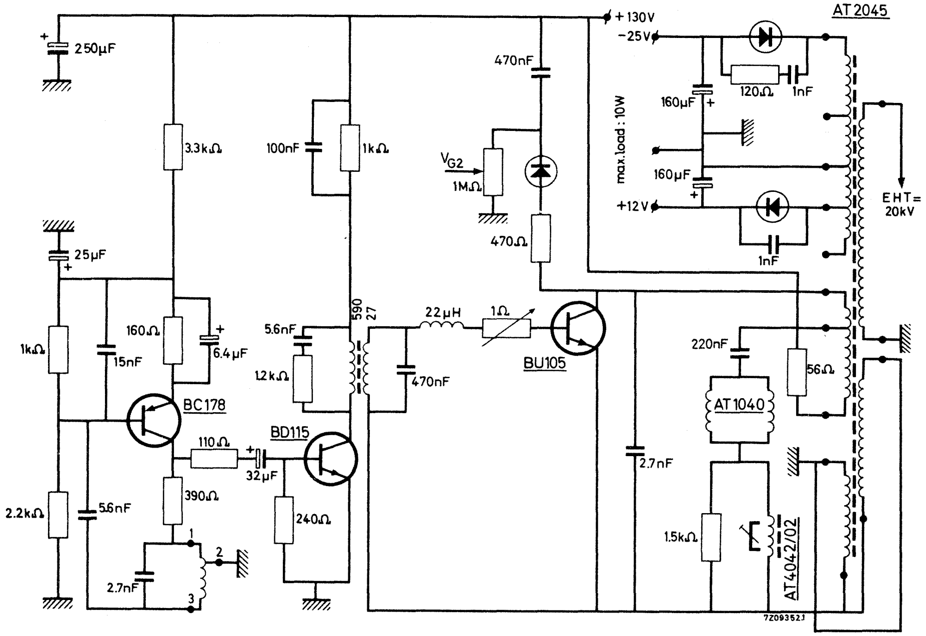
with stabilized power supply : $I_{B(end)nom}$ = 1.2 A; L_B = 17 μH
non stabilized power supply : $I_{B(end)nom}$ = 1.4 A; L_B = 12 μH

d. Switching times

Typical values under nominal conditions are:
with stabilized power supply : t_f typ. 0.7 μs; t_s typ. 12.5 μs
non stabilized power supply : t_f typ. 0.8 μs; t_s typ. 13 μs

APPLICATION INFORMATION (continued)

Horizontal deflection circuit with BC178, BD115 and BU105 (stabilized power supply)



The BU105 in the circuit above has been designed for I_{CMnom} = 1.6 A with recommended inductance L_B = 22 µH and I_B(end) = 1.0 A.

Performance:

Collector current before switching (peak value)	I_{CM}	typ.	1.6	A
Storage time at 90 % of I_{CM}	t_s	typ.	12.5	µs
Fall time at 10 % of I_{CM}	t_f	typ.	0.6	µs
Collector-emitter voltage at 1 µs before $i_C = I_{CM}$	V_{CE}(end)	typ.	1.5	V
Collector-emitter voltage (peak value)	V_{CEM}	typ.	950	V
Fly-back ratio		typ.	18	%
Period-time		typ.	64	µs

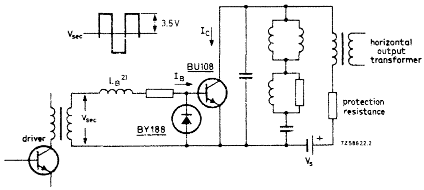
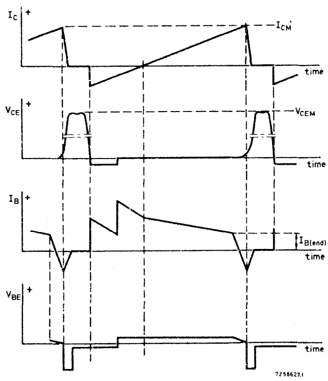
APPLICATION INFORMATION

Safety margins on I_{CM} and V_{CEM}

Because of component tolerances and supply voltage variations the values of I_{CM} and V_{CEM} encountered in a practical horizontal deflection output stage will usually differ from those of a nominal circuit under nominal conditions; the difference, due to component tolerances and operational variations, can be as much as 20% if a stabilized supply is used. The operational variations considered, are deviations of the horizontal time-base frequency of $\pm 5\%$ with respect to the nominal value and EHT loading current up to an average of 1.5 mA.
The design graphs on the following pages refer to the nominal conditions. This implies that normal circuit tolerances and normal operational variations are taken into account when establishing the recommended base drive and heatsink parameters.
The allowance of 20% for V_{CEM} does not imply that the voltage rating for the final anode of the picture tube may be exceeded.

Simplified horizontal deflection circuit with fundamental waveforms.

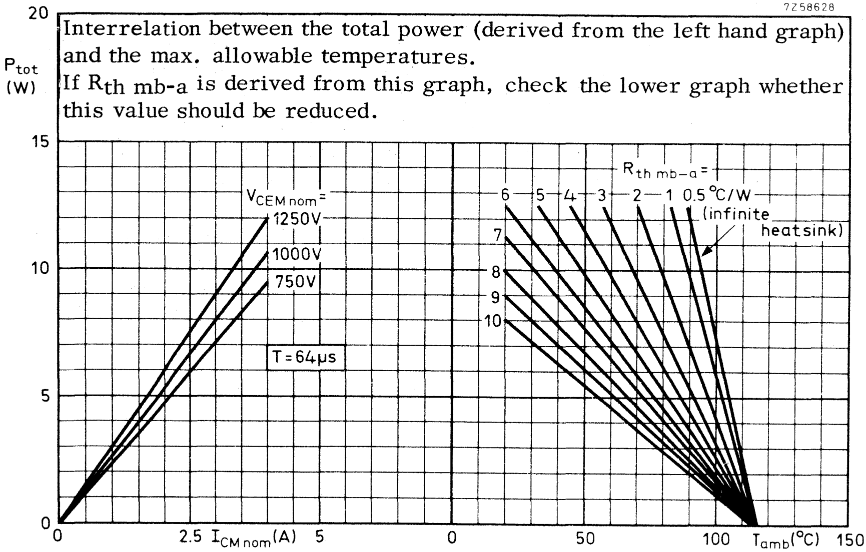




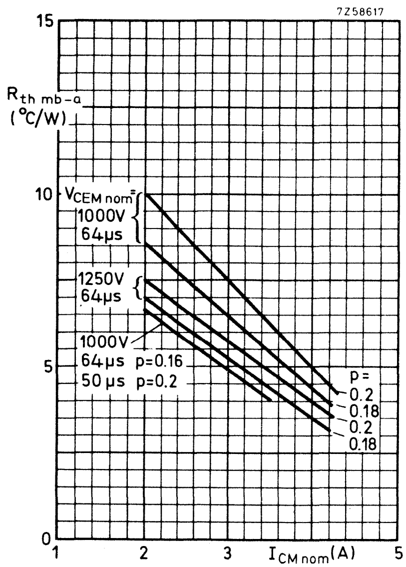
Remarks:

1. The driver and output stage should operate in a non-simultaneous mode i.e. the driver transistor should be conductive during flyback and the first part of scan.
2. Including leakage conductance of driver transformer.

APPLICATION INFORMATION (continued)

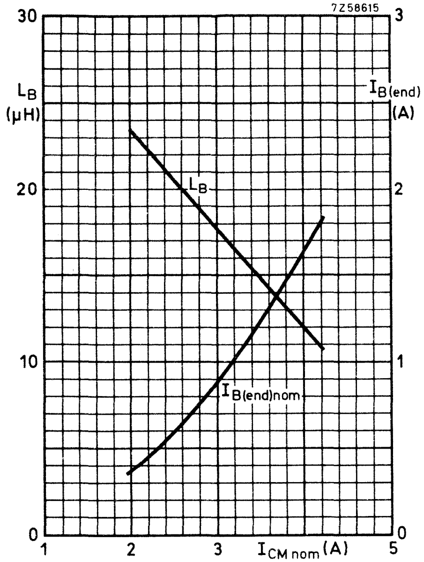


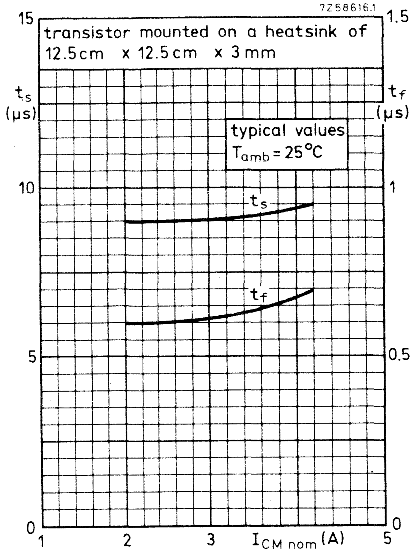
Interrelation between the total power (derived from the left hand graph) and the max. allowable temperatures.
If $R_{th\,mb-a}$ is derived from this graph, check the lower graph whether this value should be reduced.

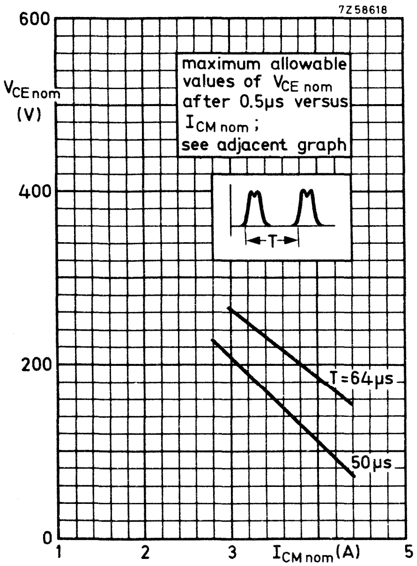


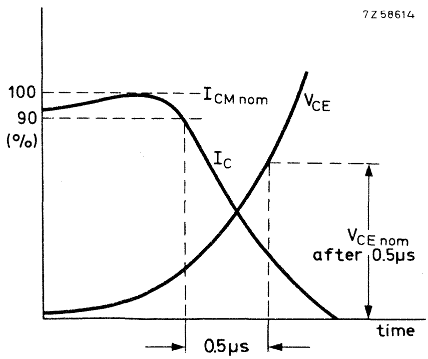
Maximum allowable $R_{th\,mb-a}$ for various operating conditions.
The values for V_{CEMnom} and I_{CMnom} referred to are normal operating conditions, the quantity 'p' denotes the ratio of the flyback pulse (t_p) over the period time T.

APPLICATION INFORMATION (continued)









Accessories

Introduction

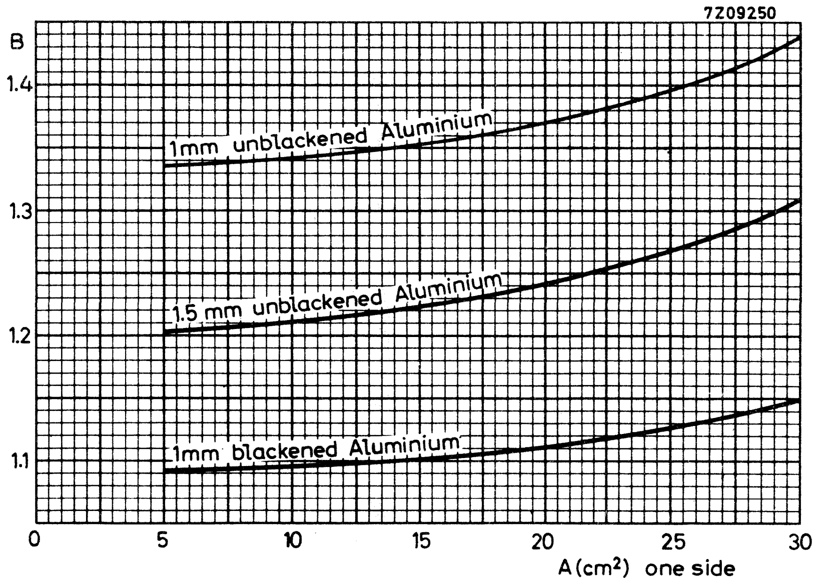
All information on thermal resistances of the accessories combined with flat heatsinks is valid for square heatsinks of 1.5 mm blackened aluminium.
For a few variations the thermal resistance may be derived as follows:

a. Rectangular heatsinks (sides a and 2a)

When mounted with long side horizontal, multiply by 0.95.
When mounted with short side horizontal, multiply by 1.10.

b. Unblackened or thinner heatsinks

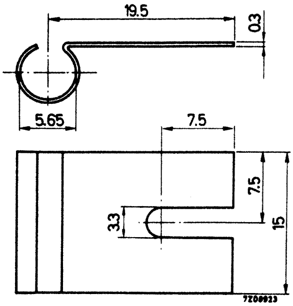
Multiply by the factor B given below as a function of the heatsink size A.



COOLING FIN

MECHANICAL DATA

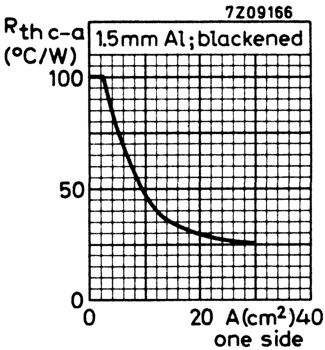
Dimensions in mm



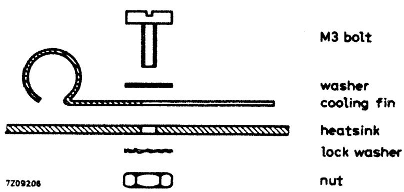
Fin material: brass, nickel plated

THERMAL RESISTANCE

From case to ambient with cooling fin only	$R_{th\ c-a}$ =	100 °C/W
with heatsink		see graph



MOUNTING INSTRUCTIONS

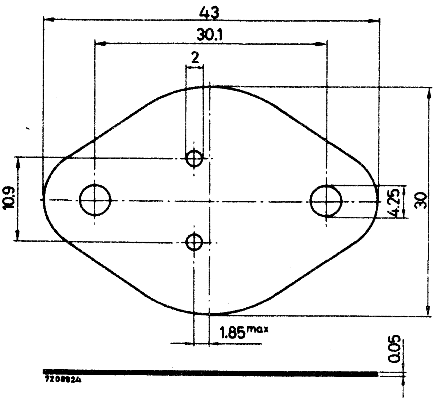


Torque on nut for good heat transfer: 5 cm kg

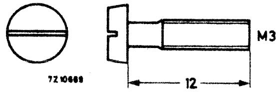
MOUNTING ACCESSORIES

MECHANICAL DATA

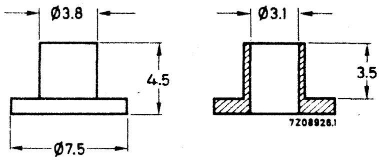
Dimensions in mm



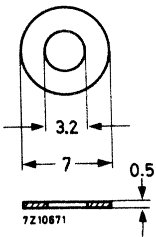
mica washer



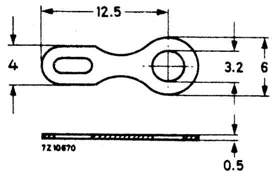
2 cheese head screws, slotted
material: brass, nickel plated



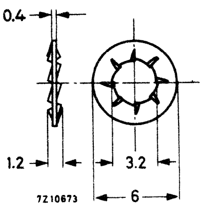
2 insulating bushes



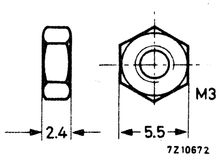
3 plain washers
material: brass, nickel plated



soldering tag



2 lock washers, internal teeth
material: steel, nickel plated



2 hexagon nuts
material: brass, nickel plated

THERMAL RESISTANCE

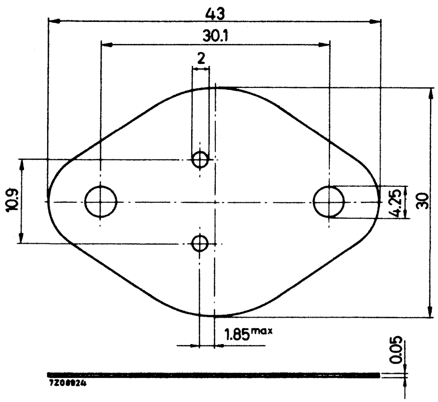
From mounting base to heatsink with mica washer $R_{th\ mb\text{-}h}$ = 1.0 °C/W

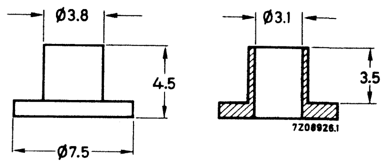
TEMPERATURES

Maximum allowable temperature T_{max} = 150 °C

56201a MICA WASHER AND 2 INSULATING BUSHES

MECHANICAL DATA Dimensions in mm



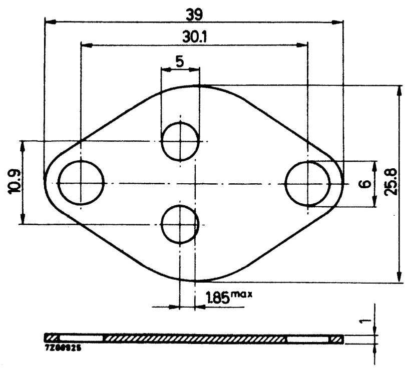


THERMAL RESISTANCE

From mounting base to heatsink $R_{th\ mb\text{-}h}$ = 1.0 °C/W

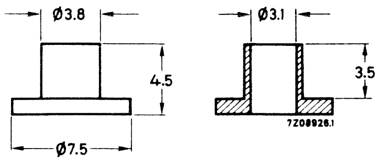
56201b LEAD WASHER

MECHANICAL DATA Dimensions in mm



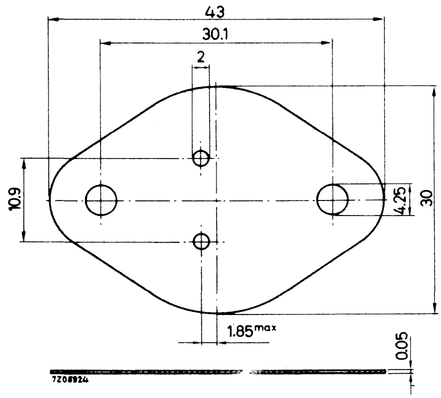
56201c INSULATING BUSH

MECHANICAL DATA Dimensions in mm



56201d MICA WASHER

MECHANICAL DATA Dimensions in mm



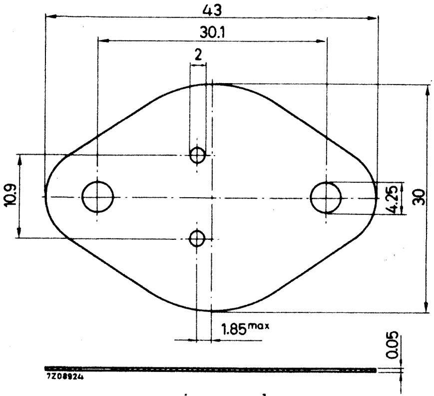
THERMAL RESISTANCE

From mounting base to heatsink $R_{th\ mb-h}$ = 1.0 °C/W

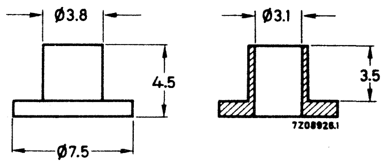
MOUNTING ACCESSORIES

MECHANICAL DATA

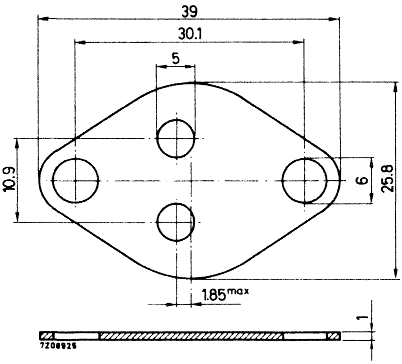
Dimensions in mm



mica washer



2 insulating bushes



lead washer

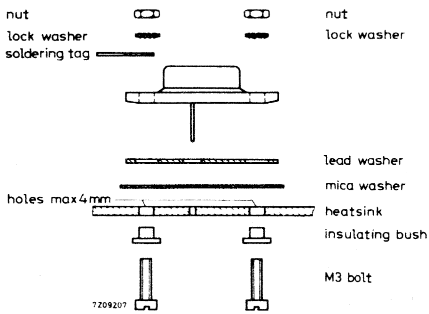
THERMAL RESISTANCE

From mounting base to heatsink				
with mica washer only	$R_{th\ mb-h}$	=	1.0	°C/W
with mica washer and lead washer	$R_{th\ mb-h}$	=	0.75	°C/W

TEMPERATURE

Maximum allowable temperature	T_{max}	=	150	°C

MOUNTING INSTRUCTIONS



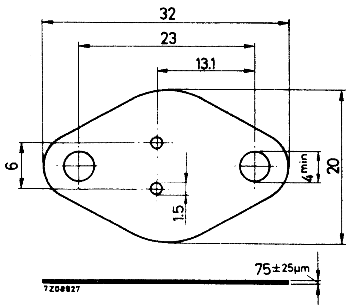
Torque on nut for good heat transfer : 5 cm kg

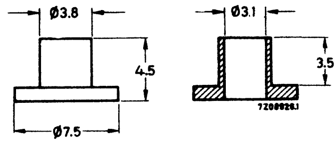
Warning: A plain washer shall be inserted between M3 bolt and insulating bush to prevent this insulating bush from being damaged.

MICA WASHER AND 2 INSULATING BUSHES

MECHANICAL DATA

Dimensions in mm





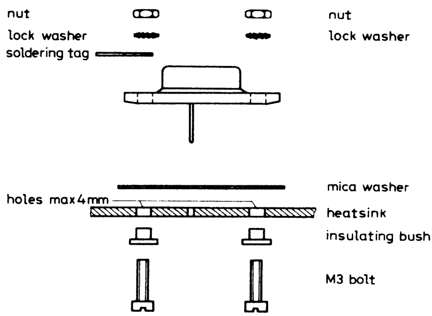
THERMAL RESISTANCE

From mounting base to heatsink	$R_{th\ mb\text{-}h}$	=	1.5	°C/W

TEMPERATURE

Maximum allowable temperature	T_{max}	=	150	°C

MOUNTING INSTRUCTIONS



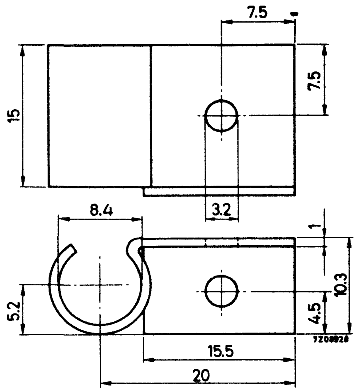
Torque on nut for good heat transfer: 5 cm kg

→ Warning: A plain washer shall be inserted between M3 bolt and insulating bush to prevent this insulating bush from being damaged.

COOLING FIN

MECHANICAL DATA

Dimensions in mm

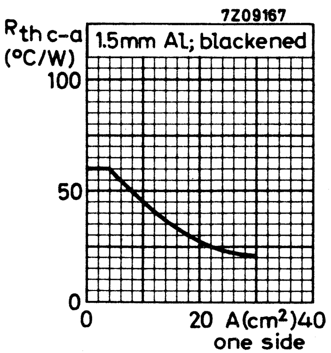


Fin material: aluminium, blackened

THERMAL RESISTANCE

From case to ambient with cooling fin only — $R_{th\ c-a}$ = 60 °C/W

with heatsink — see graph



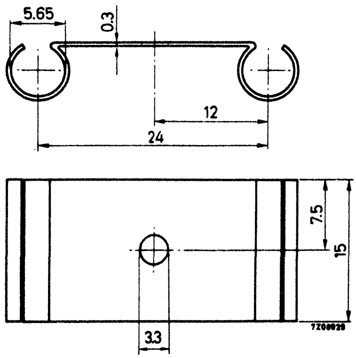
MOUNTING INSTRUCTIONS

Torque on M3 bolts for good heat transfer: 5 cm kg

COOLING FIN

MECHANICAL DATA

Dimensions in mm

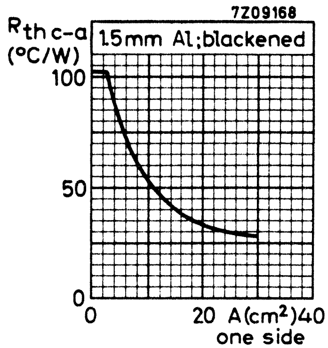


Fin material: brass, nickel plated

THERMAL RESISTANCE

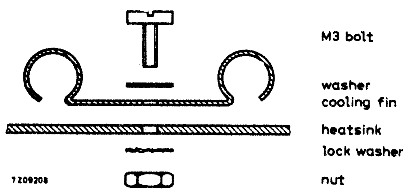
From case to ambient with cooling fin only $R_{th\ c\text{-}a}$ = 102 °C/W

with heatsink see graph



R_{th} values apply to each transistor, provided the two transistors have been mounted so that the heat flow from each is equal.

MOUNTING INSTRUCTIONS

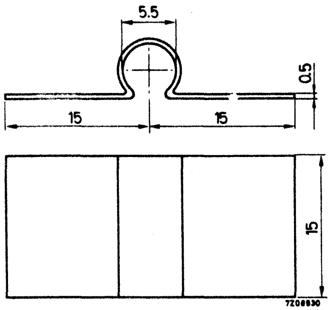


Torque on nut for good heat transfer: 5 cmkg

COOLING FIN

MECHANICAL DATA

Dimensions in mm



Fin material: brass, nickel plated

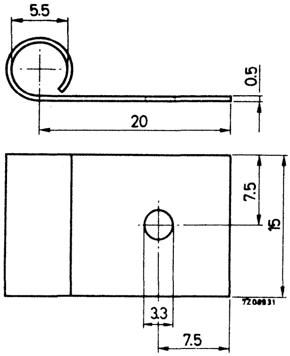
THERMAL RESISTANCE

From case to ambient with cooling fin only $R_{th\ c\text{-}a}$ = 75 $^{o}C/W$

COOLING FIN

MECHANICAL DATA

Dimensions in mm

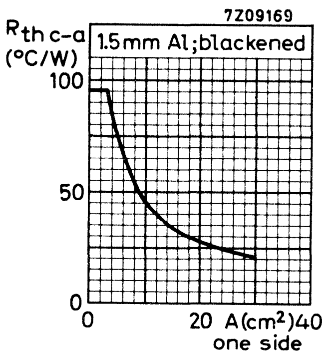


Fin material: brass, nickel plated

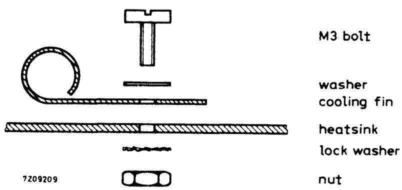
THERMAL RESISTANCE

From case to ambient with cooling fin only — $R_{th\ c\text{-}a}$ = 95 °C/W

with heatsink — see graph



MOUNTING INSTRUCTIONS



Torque on nut for good heat transfer: 5 cm kg

MOUNTING ACCESSORIES
