Surface acoustic wave devices

Elcoma – Philips Electronic Components and Materials Division – embraces a world-wide group of companies operating under the following names:

IBRAPE

MBLE

Miniwatt

Mullard

PHILIPS

signetics

VALVO

Elcoma offers you a technological partnership in developing your systems to the full. A partnership to which we can bring

- world-wide production and marketing
- know-how
- systems approach
- continuity
- broad product line
- fundamental research
- leading technologies
- applications support
- quality

DATA HANDBOOK SYSTEM

Our Data Handbook System comprises more than 60 books with specifications on electronic components, subassemblies and materials. It is made up of four series of handbooks:

ELECTRON TUBES

BLUE

SEMICONDUCTORS

RED

INTEGRATED CIRCUITS

PURPLE

COMPONENTS AND MATERIALS

GREEN

The contents of each series are listed on pages iv to viii.

The data handbooks contain all pertinent data available at the time of publication, and each is revised and reissued periodically.

When ratings or specifications differ from those published in the preceding edition they are indicated with arrows in the page margin. Where application information is given it is advisory and does not form part of the product specification.

Condensed data on the preferred products of Philips Electronic Components and Materials Division is given in our Preferred Type Range catalogue (issued annually).

Information on current Data Handbooks and on how to obtain a subscription for future issues is available from any of the Organizations listed on the back cover.

Product specialists are at your service and enquiries will be answered promptly.

ELECTRON TUBES (BLUE SERIES)

The blue series of data handbooks comprises:

- T1 Tubes for r.f. heating**
 - T2a Transmitting tubes for communications, glass types**
 - T2b Transmitting tubes for communications, ceramic types**
 - T3 Klystrons, travelling-wave tubes, microwave diodes**
 - ET3 Special Quality tubes, miscellaneous devices (will not be reprinted)**
 - T4 Magnetrons for microwave heating**
 - T5 Cathode-ray tubes**
Instrument tubes, monitor and display tubes, C.R. tubes for special applications
 - T6 Geiger-Müller tubes**
 - T7 Gas-filled tubes**
Segment indicator tubes, indicator tubes, dry reed contact units, thyratrons, industrial rectifying tubes, ignitrons, high-voltage rectifying tubes, associated accessories
 - T8 Picture tubes and components**
Colour TV picture tubes, black and white TV picture tubes, colour monitor tubes for data graphic display, monochrome monitor tubes for data graphic display, components for colour television, components for black and white television and monochrome data graphic display
 - T9 Photo and electron multipliers**
Photomultiplier tubes, phototubes, single channel electron multipliers, channel electron multiplier plates
 - T10 Camera tubes and accessories**
 - T11 Microwave semiconductors and components**
 - T12 Vidicons and Newvicons**
 - T13 Image intensifiers**
 - T14 Infrared detectors**
 - T15 Dry reed switches**
 - T16 Monochrome tubes and deflection units**
Black and white TV picture tubes, monochrome data graphic display tubes, deflection units
- Data collations on these subjects are available now.
Data Handbooks will be published in 1985.

SEMICONDUCTORS (RED SERIES)

The red series of data handbooks comprises:

S1 Diodes

Small-signal germanium diodes, small-signal silicon diodes, voltage regulator diodes (< 1,5 W), voltage reference diodes, tuner diodes, rectifier diodes

S2a Power diodes

S2b Thyristors and triacs

S3 Small-signal transistors

S4a Low-frequency power transistors and hybrid modules

S4b High-voltage and switching power transistors

S5 Field-effect transistors

S6 R.F. power transistors and modules

S7 Surface mounted semiconductors

S8 Devices for optoelectronics

Photosensitive diodes and transistors, light-emitting diodes, displays, photocouplers, infrared sensitive devices, photoconductive devices.

S9 Power MOS transistors

S10 Wideband transistors and wideband hybrid IC modules

S11 Microwave semiconductors

(to be published in 1985)

S12 Surface acoustic wave devices

INTEGRATED CIRCUITS (PURPLE SERIES)

The purple series of data handbooks comprises:

EXISTING SERIES

- IC1** Bipolar ICs for radio and audio equipment
- IC2** Bipolar ICs for video equipment
- IC3** ICs for digital systems in radio, audio and video equipment
- IC4** Digital integrated circuits
CMOS HE4000B family
- IC5** Digital integrated circuits – ECL
ECL10 000 (GX family), ECL100 000 (HX family), dedicated designs
- IC6** Professional analogue integrated circuits
- IC7** Signetics bipolar memories
- IC8** Signetics analogue circuits
- IC9** Signetics TTL logic
- IC10** Signetics Integrated Fuse Logic (IFL)
- IC11** Microprocessors, microcomputers and peripheral circuitry

NEW SERIES

- | | | |
|--------------|--|------------------|
| IC01N | Radio, audio and associated systems
Bipolar, MOS | |
| IC02N | Video and associated systems
Bipolar, MOS | |
| IC03N | Telephony equipment
Bipolar, MOS | |
| IC04N | HE4000B logic family
CMOS | |
| IC05N | HE4000B logic family uncased integrated circuits
CMOS | (published 1984) |
| IC06N | PC54/74HC/HCU/HCT logic families
HCMOS | |
| IC07N | PC54/74HC/HCU/HCT uncased integrated circuits
HCMOS | |
| IC08N | 10K and 100K logic family
ECL | (published 1984) |
| IC09N | Logic series
TTL | (published 1984) |
| IC10N | Memories
MOS, TTL, ECL | |
| IC11N | Analogue - industrial | |
| IC12N | Semi-custom gate arrays & cell libraries
ISL, ECL, CMOS | |
| IC13N | Semi-custom integrated fuse logic
IFL series 20/24/28 | |
| IC14N | Microprocessors, microcontrollers & peripherals
Bipolar, MOS | |
| IC15N | Logic series
FAST TTL | (published 1984) |

Note

Books available in the new series are shown with their date of publication.

COMPONENTS AND MATERIALS (GREEN SERIES)

The green series of data handbooks comprises:

- C1 Programmable controller modules**
PLC modules, PC20 modules
- C2 Television tuners, video modulators, surface acoustic wave filters**
- C3 Loudspeakers**
- C4 Ferroxcube potcores, square cores and cross cores**
- C5 Ferroxcube for power, audio/video and accelerators**
- C6 Synchronous motors and gearboxes**
- C7 Variable capacitors**
- C8 Variable mains transformers**
- C9 Piezoelectric quartz devices**
Quartz crystal units, temperature compensated crystal oscillators, compact integrated oscillators, quartz crystal cuts for temperature measurements
- C10 Connectors**
- C11 Non-linear resistors**
Voltage dependent resistors (VDR), light dependent resistors (LDR), negative temperature coefficient thermistors (NTC), positive temperature coefficient thermistors (PTC)
- C12 Variable resistors and test switches**
- C13 Fixed resistors**
- C14 Electrolytic and solid capacitors**
- C15 Ceramic capacitors***
- C16 Permanent magnet materials**
- C17 Stepping motors and associated electronics**
- C18 D.C. motors**
- C19 Piezoelectric ceramics**
- C20 Wire-wound components for TVs and monitors**
- C21 Assemblies for industrial use**
HN1L FZ/30 series, NORbits 60-, 61-, 90-series, input devices

* Film capacitors are included in Data Handbook C22 which will be published in 1985. The September 1982 edition of C15 should be retained until C22 is issued.

1.0 // 9 }	1.5 // 12 }	1.0 // 16 }	1.5 // 7.5 }		

*all dB values are expressed as attenuation; insertion loss is defined as P_{in}/P_{out} , all other values are relative to the passband mid-frequency.

SURFACE ACOUSTIC WAVE FILTER

The RW153A is a lithium niobate surface wave device for use as an i.f. bandpass filter in colour and monochrome TV receivers. It is specifically designed for CCIR system I as used in the United Kingdom.

QUICK REFERENCE DATA

	Frequency (MHz)			
	37.0	typ.	15	dB
Insertion loss	37.0			
Attenuation	reference at	37.0	0	dB
Vision carrier		39.5	typ.	6 dB
Sound carrier		33.5	typ.	20 dB
Adjacent vision trap		31.5	typ.	46 dB
Adjacent sound trap		41.5	typ.	50 dB
Operating temperature range			-10 to +70	°C

MECHANICAL DATA

5-lead TO-8.

Dimensions in mm

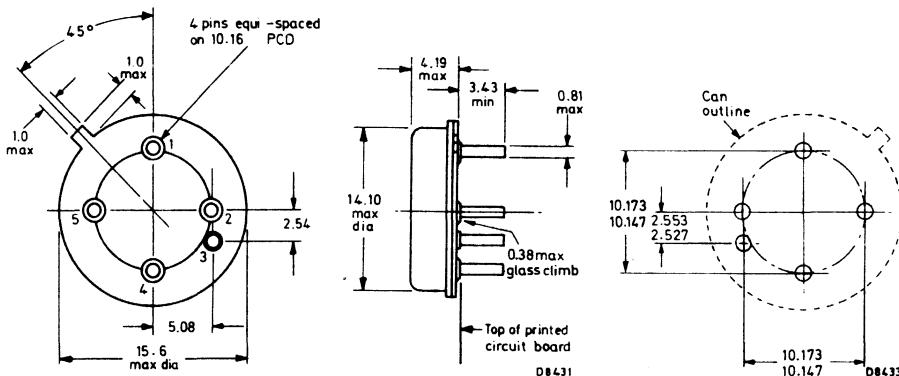

Fig.1a Connections.

1. balanced output
2. input high
3. can earth
4. input earth
5. balanced output

Fig.1b Printed circuit board hole layout.

Standard 0.1" grid.
Hole dia. 1.2 mm min.

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Operating ambient temperature	-10 to +70	°C
Storage temperature	-25 to +85	°C
Pin to pin voltage (short term) max.*	10	V

CHARACTERISTICS

Test conditions: ambient temperature	25	°C
input drive impedance	50	Ω
load impedance (balanced)	300	Ω

	Frequency MHz	min.	typ.	max.
Insertion loss	37.0	—	15	— dB
Attenuation , reference at 37.0 MHz = 0 dB				
Vision carrier	39.5	5	6	7 dB
Chroma carrier	35.07	1	3	4 dB
Sound carrier	33.5	18	20	22 dB
Adjacent vision trap	31.5	40	46	— dB
Adjacent sound trap	41.5	46	50	— dB
Out of band response	10 to 60	38	—	— dB
	60 to 100	15	—	— dB
Pass band ripple (p-p)	36 to 38	—	0.5	1.0 dB
Group delay (relative to 0 ns at 39.5 MHz)	34.5 to 40.5			±40 ns
Spurious reflections and direct break through suppression	37.0	min.	40	dB
2Tsin ² pulse and bar k rating	39.5	max.	3	%
Temperature coefficient of frequency		typ.	—70 × 10 ⁻⁶ /K	
Small-signal impedance				
input	37.0	typ.	1.4 kΩ//8.5 pF	
output	37.0	typ.	1.5 kΩ//14 pF	

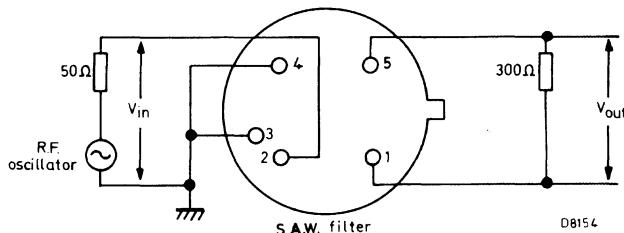

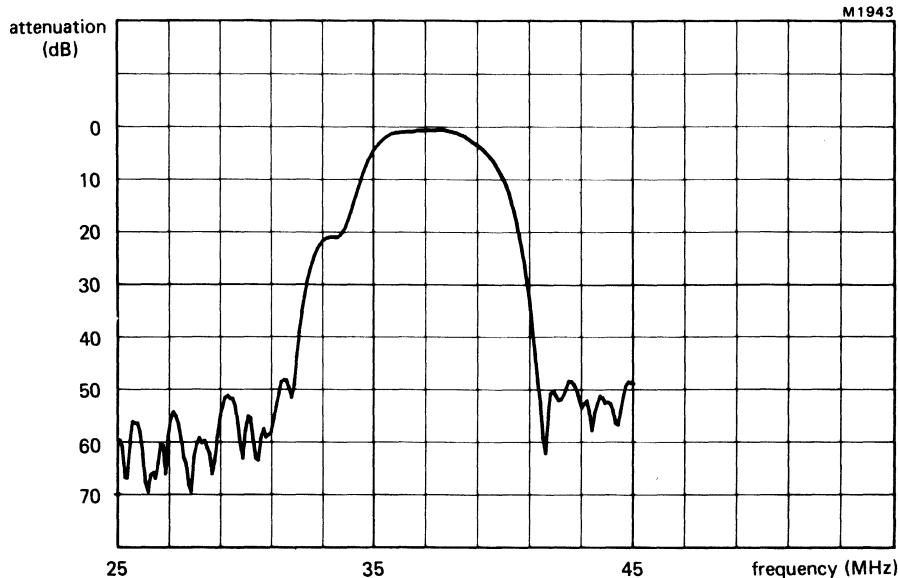

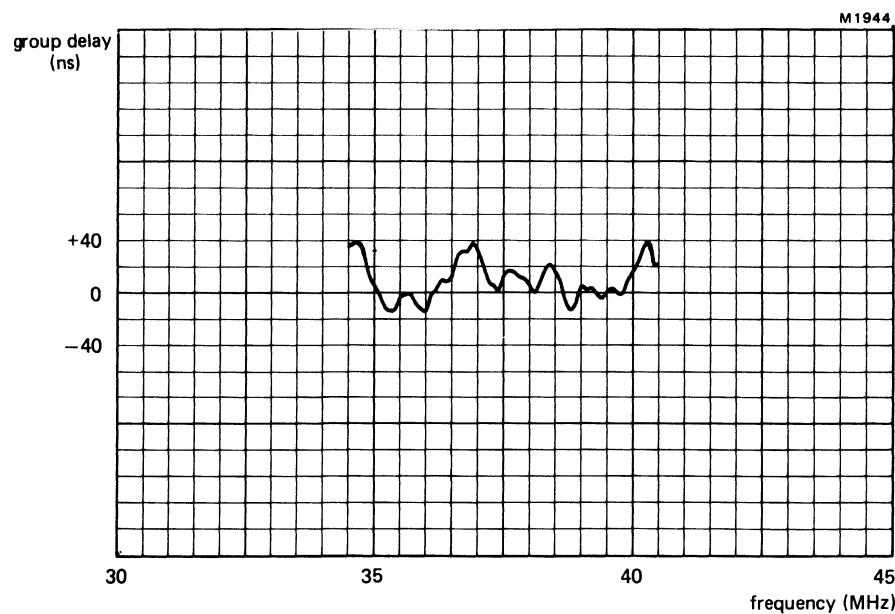

Fig.2 Test and basic application circuit

*For maximum operating life, the filter should be used with d.c. isolating capacitors.

Typical amplitude response (relative to 0 dB at 37.0 MHz)

Typical group delay (relative to 0 ns at 39.5 MHz)

SURFACE ACOUSTIC WAVE FILTER

The RW154 is a lithium niobate surface wave device for use as an i.f. bandpass filter in colour and monochrome TV receivers. It is specifically designed for CCIR system I as used in the United Kingdom.

QUICK REFERENCE DATA

	Frequency (MHz)			
	37.0	typ.	20	dB
Insertion loss				
Attenuation	reference at	37.0		0 dB
Vision carrier		39.5	typ.	6 dB
Sound carrier		33.5	typ.	20 dB
Adjacent vision trap		31.5	typ.	46 dB

2. SPECIAL PURPOSE FILTERS

Transmitter and transposer filters for television

SURFACE ACOUSTIC WAVE FILTERS

for professional tv applications

This range of surface acoustic wave filters for professional tv transmission applications provides a cost effective and compact alternative to conventional i.f. filtering.

The main features of these high performance devices are:

- low passband and group delay ripple
- high stability
- high sideband suppression

SURVEY

type number	CCIR system	application	vision carrier frequency MHz	remarks
RW651	B/G	transposer	38,9	
RW652	B/G	transmitter	38,9	
RW661	I	transposer	39,5	very low passband and group delay ripple
RW662	I	transposer	38,9	complementary pair for sound and
RW663	I	transposer	32,9*	vision
RW664	I	transmitters	38,9	controlled h.f. roll-off
RW671	M	transmitters	45,75	
RW672	M	transmitters	38,9	non-standard i.f.
RW681	D/K	transmitters	38,9	

Package

24-lead hermetic metal DIL.

* Sound carrier frequency.

Test conditions

Source and load impedance	50 Ω
Measurement temperature	23 °C
Design temperature	65 ± 5 °C

Note

Professional applications demand close limits on the passband response, particularly on the position of the vision carrier. To maintain these characteristics the filters are designed for temperature-controlled operation. The temperature coefficient is $-75 \times 10^{-6}/\text{K}$, which is equivalent to a frequency shift of 120 kHz at 38,9 MHz for a temperature change from 23 °C to 65 °C.

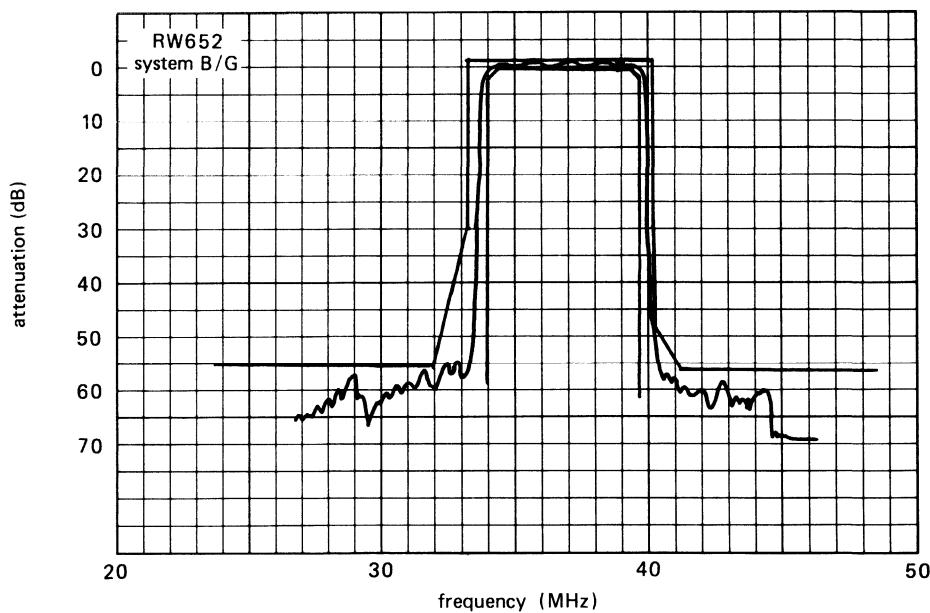

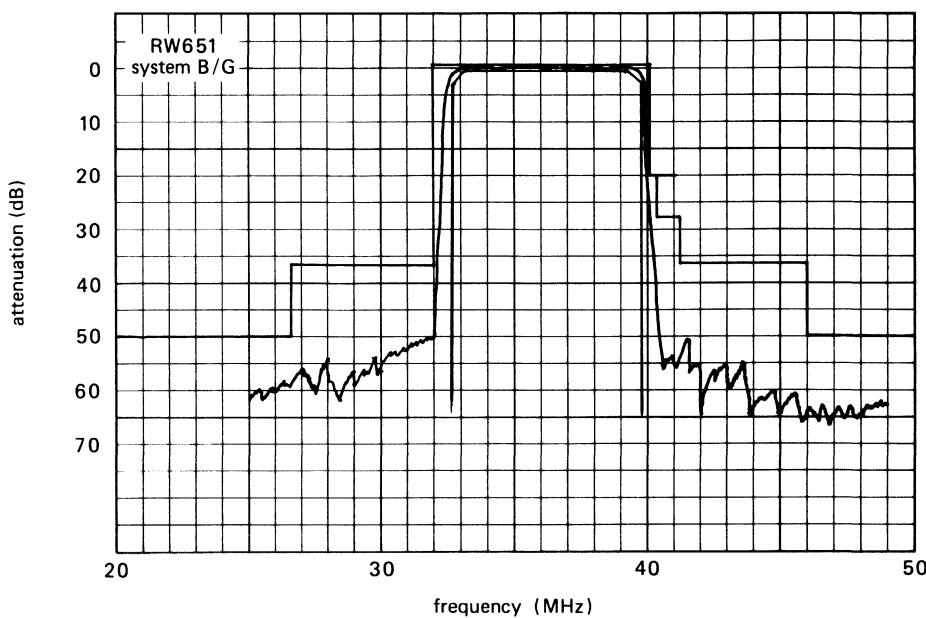

CHARACTERISTICS

Passband amplitude ripple (p-p)		typ. 1,0; max. 2,0
Amplitude	32,2	max. -50
Amplitude	33,8	max. -45
Stopband	d.c. to 32,2	min. 50
Stopband	33,8 to 41,0	min. 45
Stopband	41,0 to 100	min. 50
General		
Insertion loss		typ. 28 dB; max. 30 dB
Passband group delay		typ. 3800 ns
Passband group delay ripple (p-p)		max. 100 ns

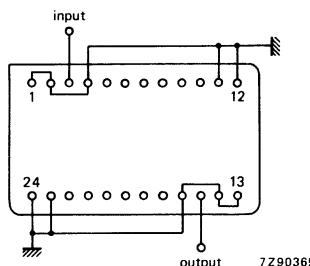

Fig. 2.

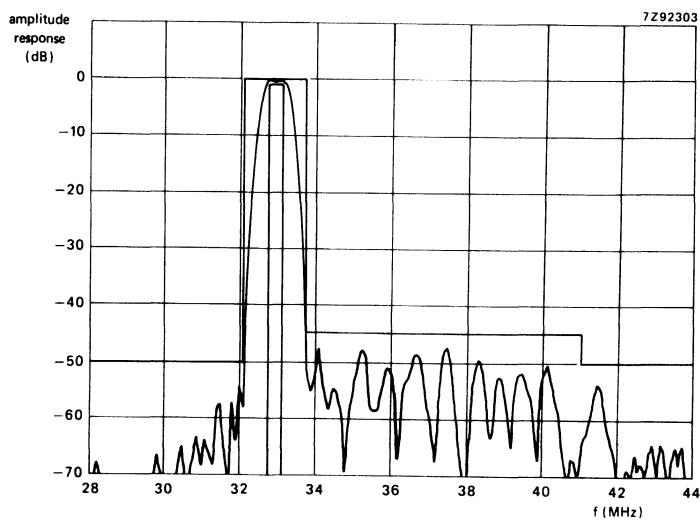

Fig. 3.

SURFACE ACOUSTIC WAVE FILTER

The RW664 is a surface acoustic wave filter for use in high performance system I TV modulators and transmitters with separate sound processing. It has low amplitude and group delay ripple.

The filter is manufactured on a lithium niobate substrate and is encapsulated in a 24-pin hermetically sealed metal DIL package.

QUICK REFERENCE DATA

Passband (-1 dB)	typ. 34,2 to 39,5 MHz
Passband amplitude ripple (p-p)	typ. 0,4 dB
Passband group delay ripple (p-p)	typ. 55 ns
Insertion loss (50 Ω source and load)	typ. 28 dB
Stopband suppression	typ. 50 dB
Design operating temperature	65 \pm 5 °C
Operating temperature range	-10 to + 70 °C

MECHANICAL DATA

Dimensions in mm

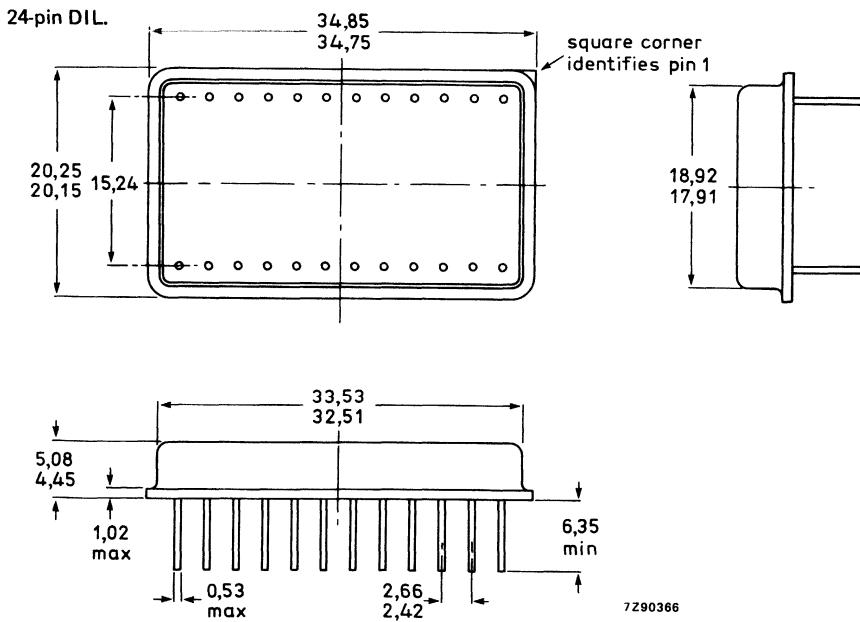

Fig. 1.

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Operating ambient temperature range	-10 to + 70 °C
Storage temperature range	-25 to + 85 °C
Pin to pin voltage (short term) max.	30 V

CHARACTERISTICS**Test conditions**

Ambient temperature	23 °C
Input drive impedance	50 Ω
Load impedance (balanced)	50 Ω

Performance at the design temperature of 65 °C may be obtained from the measured response at 23 °C using the temperature coefficient of frequency, $-75 \times 10^{-6}/\text{K}$.

For example the response at 36,9 MHz at the design temperature would be measured at 37,0 MHz at 23 °C.

Amplitude response (see also Fig. 3)

Performance figures below are relative to the level at 37,0 MHz, the reference frequency at 23 °C.

	frequency MHz	amplitude dB
Passband (-0,5 dB)	typ. 34,3 to 39,1	
Passband amplitude ripple (p-p)		typ. 0,4; max. 1,0
Amplitude	33,0	max. -30
Amplitude	33,5	min. -4
Stopband	d.c. to 31,0	min. 56
Stopband	42,0 to 100	min. 56
General		
Insertion loss		typ. 28 dB; max. 29 dB
Passband group delay		typ. 3500 ns
Passband group delay ripple (p-p)		typ. 55 ns; max. 65 ns

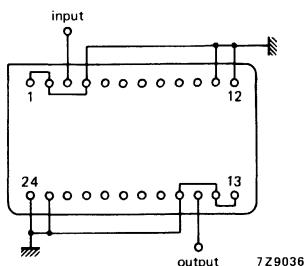

Fig. 2.

DEVELOPMENT SAMPLE DATA

This information is derived from development samples made available for evaluation. It does not necessarily imply that the device will go into regular production.

RW671

SURFACE ACOUSTIC WAVE FILTER

The RW671 is a surface acoustic wave i.f. bandpass filter for use in high performance system M TV transmitter applications.

The filter is manufactured on a lithium niobate substrate and is encapsulated in a 24-pin hermetically sealed metal DIL package.

QUICK REFERENCE DATA

Passband (-1 dB)	typ. 41,5 to 46,5 MHz
Passband amplitude ripple (p-p)	typ. 0,8 dB
Passband group delay ripple (p-p)	typ. 40 ns
Insertion loss (25 Ω source and load)	typ. 25 dB
Stopband suppression	typ. 50 dB
Design operating temperature	65 ± 5 °C
Operating temperature range	-10 to + 70 °C

MECHANICAL DATA

Dimensions in mm

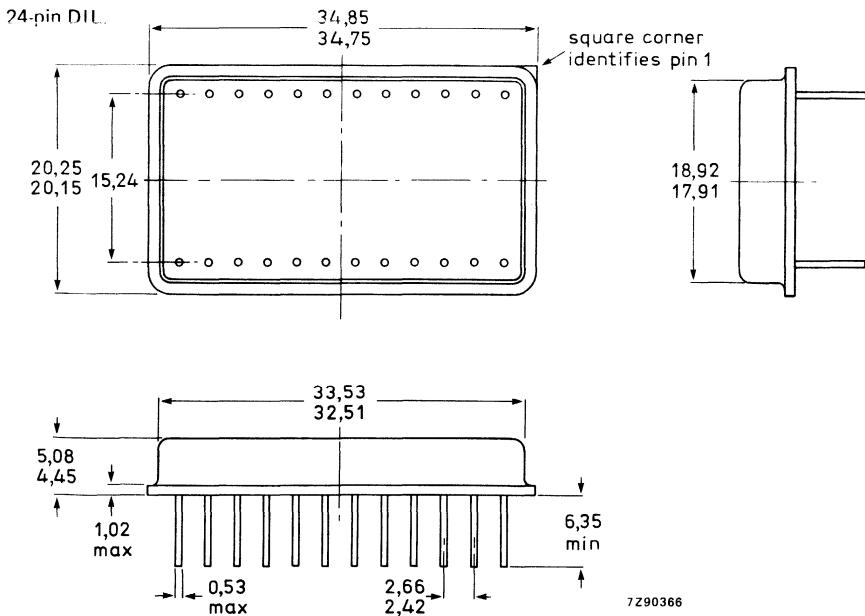

Fig. 1.

SURFACE ACOUSTIC WAVE FILTER

The RW672 is a surface acoustic wave filter for use in high performance system M TV modulators and transmitters with separate sound processing.

The filter is manufactured on a lithium niobate substrate and is encapsulated in a 24-pin hermetically sealed metal DIL package.

QUICK REFERENCE DATA

Passband (-1 dB)	typ. 35,0 to 39,5 MHz
Passband amplitude ripple (p-p)	typ. 0,4 dB
Passband group delay ripple (p-p)	typ. 70 ns
Insertion loss (50 Ω source and load)	typ. 22 dB
Stopband suppression	typ. 50 dB
Design operating temperature	65 \pm 5 °C
Operating temperature range	-10 to + 70 °C

MECHANICAL DATA

Dimensions in mm

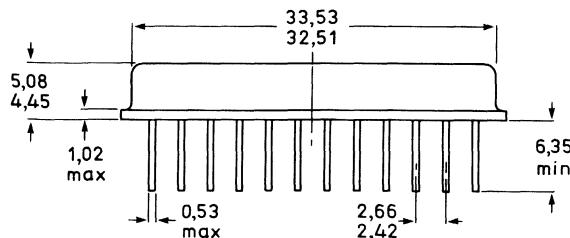

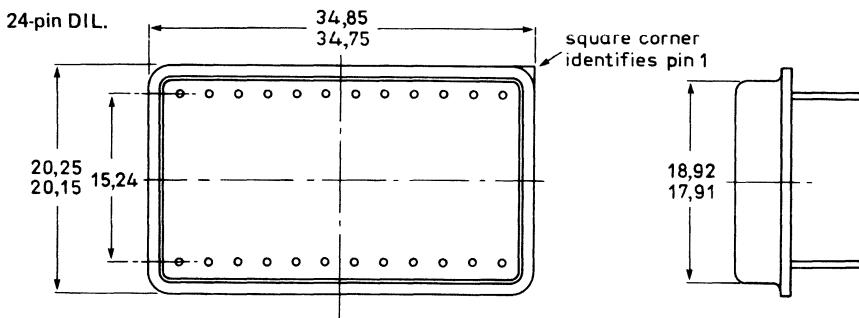

Fig. 1.

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Operating ambient temperature range	-10 to + 70 °C
Storage temperature range	-25 to + 85 °C
Pin to pin voltage (short term) max.	30 V

CHARACTERISTICS**Test conditions**

Ambient temperature	23 °C
Input drive impedance	50 Ω
Load impedance (balanced)	50 Ω

Performance at the design temperature of 65 °C may be obtained from the measured response at 23 °C using the temperature coefficient of frequency, $-75 \times 10^{-6}/\text{K}$.

For example the response at 37,4 MHz at the design temperature would be measured at 37,5 MHz at 23 °C

Amplitude response (see also Fig. 3)

Performance figures below are relative to the level at 37,5 MHz, the reference frequency at 23 °C.

	frequency MHz	amplitude dB
Passband (-0,5 dB)	typ. 35,2 to 39,4	
Passband amplitude ripple (p-p)		typ. 0,4; max. 1,0
Amplitude	34,15	max. -25
Amplitude	40,25	max. -20
Amplitude	40,5	max. -46
Stopband	d.c. to 33,0	min. 50
Stopband	42,5 to 100	min. 50
General		
Insertion loss		typ. 22 dB; max. 23 dB
Passband group delay		typ. 3600 ns
Passband group delay ripple (p-p)		typ. 70 ns; max. 90 ns

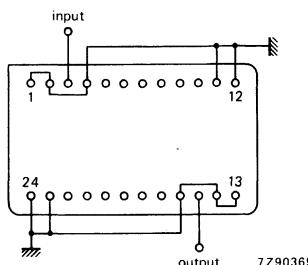

Fig. 2.

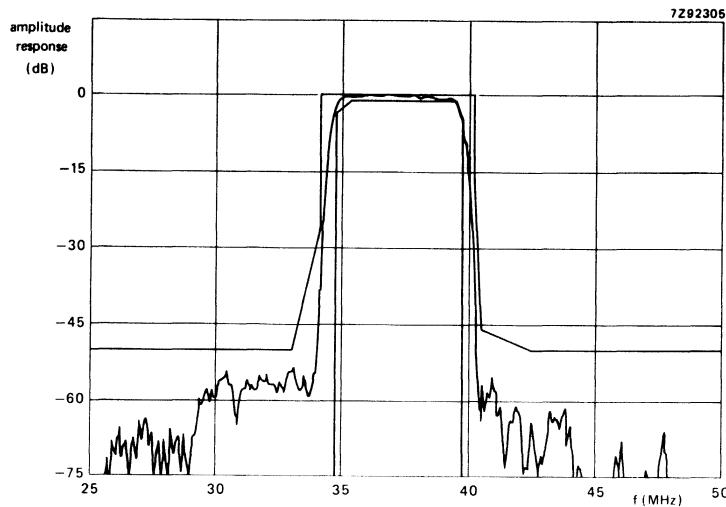

Fig. 3.

SURFACE ACOUSTIC WAVE FILTER

The RW681 is a surface acoustic wave filter for use in high performance system D/K TV modulators and transmitters with separate sound processing. It has a low amplitude and group delay ripple.

The filter is manufactured on a lithium niobate substrate and is encapsulated in a 24-pin hermetically sealed metal DIL package.

QUICK REFERENCE DATA

Passband (-1 dB)	typ. 33,2 to 39,6 MHz
Passband amplitude ripple (p-p)	typ. 0,4 dB
Passband group delay ripple (p-p)	typ. 40 ns
Insertion loss (50 Ω source and load)	typ. 27 dB
Stopband suppression	typ. 50 dB
Design operating temperature	65 ± 5 °C
Operating temperature range	-10 to + 70 °C

MECHANICAL DATA

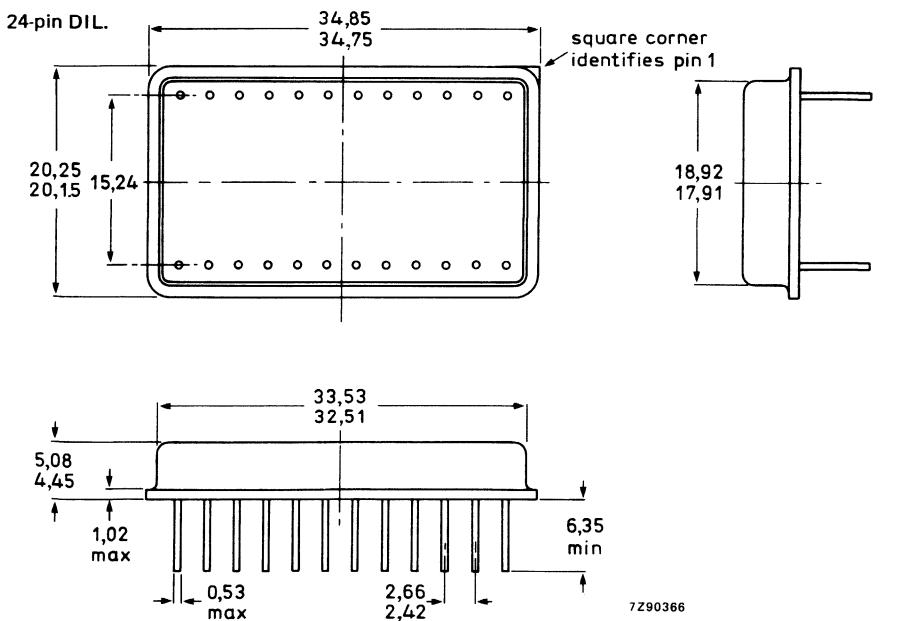

Fig. 1.

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Telephony filters

SURFACE ACOUSTIC WAVE FILTER

The SWF324AA is a surface acoustic wave filter on ST quartz for use in digital telephony as a carrier recovery filter. This filter is specifically designed to provide satisfactory operation whether balanced or unbalanced input or output signals are required.

QUICK REFERENCE DATA

Nominal centre frequency	324.3 MHz
Bandwidth (-3 dB)	1.5 MHz
Insertion loss (50 Ω source and load)	21.5 dB
Operating ambient temperature range	-10 to +70 °C

MECHANICAL DATA

5 lead TO-8

Dimensions in mm
