## Ceramic capacitors

**Elcoma** – Philips Electronic Components and Materials Division – embraces a world-wide group of companies operating under the following names:

**IBRAPE**

Miniwatt

**Signetics**

**Mullard**

**VALVO**

**PHILIPS**

Elcoma offers you a technological partnership in developing your systems to the full. A partnership to which we can bring

- world-wide production and marketing
- know-how
- systems approach
- continuity
- broad product line
- fundamental research
- leading technologies
- applications support
- quality

## DATA HANDBOOK SYSTEM

Our Data Handbook System comprises more than 60 books with specifications on electronic components, subassemblies and materials. It is made up of four series of handbooks:

ELECTRON TUBES	BLUE
SEMICONDUCTORS	RED
INTEGRATED CIRCUITS	PURPLE
COMPONENTS AND MATERIALS	GREEN

The contents of each series are listed on pages iv to vii.

The data handbooks contain all pertinent data available at the time of publication, and each is revised and reissued periodically.

When ratings or specifications differ from those published in the preceding edition they are indicated with arrows in the page margin. Where application information is given it is advisory and does not form part of the product specification.

Condensed data on the preferred products of Philips Electronic Components and Materials Division is given in our Preferred Type Range catalogue (issued annually).

Information on current Data Handbooks and on how to obtain a subscription for future issues is available from any of the Organizations listed on the back cover.

Product specialists are at your service and enquiries will be answered promptly.

## ELECTRON TUBES (BLUE SERIES)

The blue series of data handbooks comprises:

- T1      Tubes for r.f. heating**
- T2a     Transmitting tubes for communications, glass types**
- T2b     Transmitting tubes for communications, ceramic types**
- T3      Klystrons**
- T4      Magnetrons for microwave heating**
- T5      Cathode-ray tubes**  
Instrument tubes, monitor and display tubes, C. R. tubes for special applications
- T6      Geiger-Müller tubes**
- T8      Colour display systems**  
Colour TV picture tubes, colour data graphic display tube assemblies, deflection units
- T9      Photo and electron multipliers**
- T10     Plumbicon camera tubes and accessories**
- T11     Microwave semiconductors and components**
- T12     Vidicon and Newvicon camera tubes**
- T13     Image intensifiers and infrared detectors**
- T15     Dry reed switches**
- T16     Monochrome tubes and deflection units**  
Black and white TV picture tubes, monochrome data graphic display tubes, deflection units

## SEMICONDUCTORS (RED SERIES)

The red series of data handbooks comprises:

- S1      Diodes**  
Small-signal silicon diodes, voltage regulator diodes (< 1,5 W), voltage reference diodes, tuner diodes, rectifier diodes
- S2a     Power diodes**
- S2b     Thyristors and triacs**
- S3      Small-signal transistors**
- S4a     Low-frequency power transistors and hybrid modules**
- S4b     High-voltage and switching power transistors**
- S5      Field-effect transistors**
- S6      R.F. power transistors and modules**
- S7      Surface mounted semiconductors**
- S8a     Light-emitting diodes**
- S8b     Devices for optoelectronics**  
Optocouplers, photosensitive diodes and transistors, infrared light-emitting diodes and infrared sensitive devices, laser and fibre-optic components
- S9      Power MOS transistors**
- S10     Wideband transistors and wideband hybrid IC modules**
- S11     Microwave transistors**
- S12     Surface acoustic wave devices**
- S13     Semiconductor sensors**
- \*S14    Liquid Crystal Displays**

\* To be issued shortly.

## INTEGRATED CIRCUITS (PURPLE SERIES)

The NEW SERIES of handbooks is now completed. With effect from the publication date of this handbook the "N" in the handbook code number will be deleted.  
Handbooks to be replaced during 1986 are shown below.

The purple series of handbooks comprises:

<b>IC01</b>	<b>Radio, audio and associated systems</b> Bipolar, MOS	new issue 1986 IC01N 1985
<b>IC02a/b</b>	<b>Video and associated systems</b> Bipolar, MOS	new issue 1986 IC02Na/b 1985
<b>IC03</b>	<b>Integrated circuits for telephony</b> Bipolar, MOS	new issue 1987 IC03N 1985
<b>IC04</b>	<b>HE4000B logic family</b> CMOS	new issue 1986 IC4 1983
<b>IC05N</b>	<b>HE4000B logic family – uncased ICs</b> CMOS	published 1984
<b>IC06N</b>	<b>High-speed CMOS; PC74HC/HCT/HCU</b> Logic family	published 1986
<b>IC08</b>	<b>ECL 10K and 100K logic families</b>	New issue 1986 IC08N 1984
<b>IC09N</b>	<b>TTL logic series</b>	published 1986
<b>IC10</b>	<b>Memories</b> MOS, TTL, ECL	new issue 1986 IC7 1982
<b>IC11N</b>	<b>Linear LSI</b>	published 1985
<b>Supplement to IC11N</b>	<b>Linear LSI</b>	published 1986
<b>IC12</b>	<b>I<sup>2</sup>C-bus compatible ICs</b>	not yet issued
<b>IC13</b>	<b>Semi-custom</b> Programmable Logic Devices (PLD)	new issue 1986 IC13N 1985
<b>IC14</b>	<b>Microcontrollers and peripherals</b> Bipolar, MOS	published 1986
<b>IC15</b>	<b>FAST TTL logic series</b>	new issue 1986 IC15N 1985
<b>IC16</b>	<b>CMOS integrated circuits for clocks and watches</b>	first issue 1986
<b>IC17</b>	<b>Integrated Services Digital Networks (ISDN)</b>	not yet issued
<b>IC18</b>	<b>Microprocessors and peripherals</b>	new issue 1986

## **COMPONENTS AND MATERIALS (GREEN SERIES)**

The green series of data handbooks comprises:

- C2 Television tuners, coaxial aerial input assemblies, surface acoustic wave filters**
- C3 Loudspeakers**
- C4 Ferroxcube potcores, square cores and cross cores**
- C5 Ferroxcube for power, audio/video and accelerators**
- C6 Synchronous motors and gearboxes**
- C7 Variable capacitors**
- C8 Variable mains transformers**
- C9 Piezoelectric quartz devices**
- C11 Varistors, thermistors and sensors**
- C12 Potentiometers, encoders and switches**
- C13 Fixed resistors**
- C14 Electrolytic and solid capacitors**
- C15 Ceramic capacitors**
- C16 Permanent magnet materials**
- C17 Stepping motors and associated electronics**
- C18 Direct current motors**
- C19 Piezoelectric ceramics**
- C20 Wire-wound components for TVs and monitors**
- C22 Film capacitors**

## INTRODUCTION

## 1. GENERAL

Ceramic capacitors are widely used in electronic circuitry for coupling and decoupling, and in filters. These different functions require specific capacitor properties.

Ceramic capacitors can be divided into two classes:

**Class 1** In these capacitors dielectric materials are used which have very high specific resistance, very good Q and linear temperature dependence ( $\epsilon_r$  from 6 up to 250). They are used in such applications as oscillators and filters where low losses, capacitance drift compensation and high stability are required.

**Class 2** These capacitors have higher losses and have non-linear temperature characteristics ( $\epsilon_r > 250$ ). They are used for coupling and decoupling.

The survey below shows the various materials we use for plate capacitors and their basic chemical composition.

class 1 $\epsilon_r = 6$ up to 250, T.C. types		colour code T.C.-value	body colour
P100 (+100 $\times 10^{-6}/K$ )	MgTiO <sub>3</sub> , Mg <sub>2</sub> SiO <sub>4</sub>	red-violet	grey
NPO (0 $\times 10^{-6}/K$ )	MgTiO <sub>3</sub>	black	grey
N075 (-75 $\times 10^{-6}/K$ )		red	grey
N150 (-150 $\times 10^{-6}/K$ )		orange	grey
N220 (-220 $\times 10^{-6}/K$ )	BaNd <sub>2</sub> (Bi <sub>2</sub> )Ti <sub>5</sub> O <sub>x</sub> + TiO <sub>2</sub>	yellow	grey
N330 (-330 $\times 10^{-6}/K$ )		green	grey
N470 (-470 $\times 10^{-6}/K$ )		blue	grey
N750 (-750 $\times 10^{-6}/K$ )	TiO <sub>2</sub> + additions	violet	grey
N1500 (-1500 $\times 10^{-6}/K$ )	CaTiO <sub>3</sub> + additions	orange/orange	grey
class 2 $\epsilon_r > 250$ , high-K types		colour code K-value	body colour
$\epsilon_r = 2000$ Ba(Bi)TiO <sub>3</sub>		yellow	tan
$\epsilon_r = 5000$ (Ba, Ca) (Ti, Zr) O <sub>3</sub> + add.		blue	tan
$\epsilon_r = 14000$ (Ba, Ca) (Ti, Zr) O <sub>3</sub> + add.		green	tan

# CERAMIC CAPACITORS

## 2. CONSTRUCTION

The capacitance of a ceramic capacitor depends on the area of the electrodes (A), the thickness of the ceramic dielectric (t) and the dielectric constant of the ceramic material ( $\epsilon_r$ ); and on the number of dielectric layers (n) with multilayer ceramic capacitors:

$$C = \epsilon_r \epsilon_0 \frac{A}{t} (n)$$

The working voltage is dependent on the dielectric strength.

Two constructions are shown in the figures below:

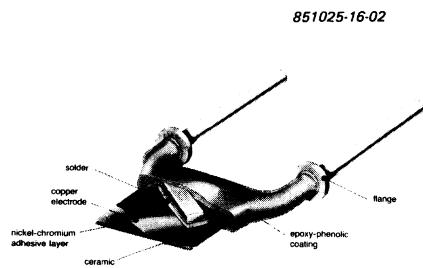

Fig. 1 Plate capacitor.

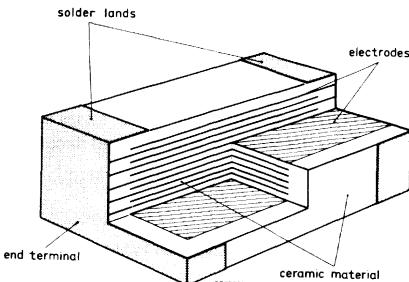

Fig. 2 Cross-section of a multilayer capacitor.

The electrodes are normally silver or some other good electrical conductor. For multilayer capacitors palladium or platinum is used since the electrodes are applied before the ceramic is fired at a temperature where silver would oxidize.

### → The dielectric material

The raw materials are finely milled and carefully mixed. Thereafter the powders are calcined at temperatures between 1100 and 1300 °C to achieve the required chemical compositions. The resultant mass is reground and dopes and/or sintering means are added.

The finely ground material is mixed with a solvent and binding matter. Thin sheets are obtained by casting or rolling.

For plate capacitors these sheets are fired in a carefully controlled atmosphere at temperatures between 1200 and 1400 °C. For multilayer capacitors electrode material is printed on the sheets and after stacking and pressing of the sheets cofired with the ceramic compact at temperatures between 100 and 1400 °C.

To prevent silver migration under humid conditions plate capacitors have copper electrodes. The totally in the ceramic enclosed electrodes of a multilayer capacitor guarantee gold life test behaviour as well. As an extra precaution to ensure a good behaviour under humid conditions and to protect the electrodes the capacitors are lacquered.

The capacitance is marked on the body of the plate capacitors. The temperature coefficient or temperature dependence are indicated by colour coding in accordance with international standards (see the table on the preceding page).

### 3. EQUIVALENT CIRCUIT

Figure 3 shows the equivalent circuit of a capacitor.

$C$  is the capacitance between the two electrodes, plus the stray capacitances at the edges and between the leads.

$R_p$  is the insulation resistance of insulation and dielectric. Generally  $R_p$  is very high, and of decreasing importance with increasing frequency.

$R_p$  also represents the polarization losses of the dielectric material in an alternating electric field.

$R_s$  is the losses in the leads, the electrodes and the contacts. Up to several hundreds of MHz the current penetration depth is greater than the conductor thickness so that no skin-effect occurs. For ceramic capacitors  $R_s$  is extremely low.

$L$  is the inductance of the leads and the internal inductance of the capacitor; the latter, however, is almost negligible.

The inductance is only important in high frequency applications, since the capacitor will act as an inductance when the frequency is higher than its resonance frequency.

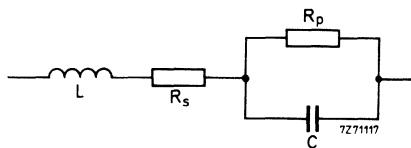

Fig. 3.

### 4. TANGENT OF THE LOSS ANGLE

The losses of a capacitor are expressed in terms of  $\tan \delta$  which is the relationship between the resistive and reactive parts of the impedance, specified as follows:

$$\tan \delta = \left| \frac{R}{X} \right| = \frac{R_p + R_s \left( 1 + (\omega C R_p)^2 \right)}{\omega C R_p^2 - \omega L \left( 1 + (\omega C R_p)^2 \right)}$$

From this formula,  $\tan \delta$  can be derived for different frequency ranges as shown diagrammatically in the graph of Fig. 4.

# CERAMIC CAPACITORS

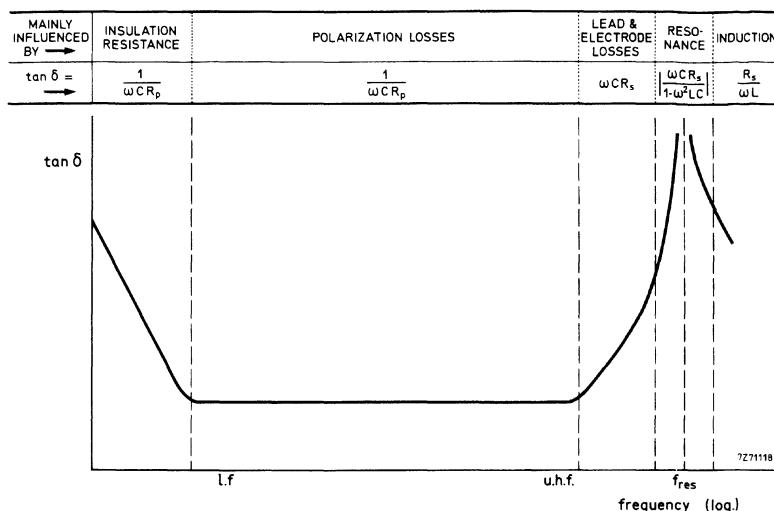

Fig. 4.

## 5. RELIABILITY

The failure rates shown below have a confidence level of 60% and refer to observations of plate capacitors up to and including 1984.

number of component hours	failure rate		
	catastrophic	degradation	field result
17 290 000	6 FIT	42 FIT	< 0,2 FIT

### Notes

1 FIT = 1 failure rate within  $10^9$  component hours.

Catastrophic and degradation failure rates are given under normalized conditions, i.e. at  $\frac{1}{2} \times$  rated voltage (d.c.) and  $T_{amb} = 40^\circ C$ .

Catastrophic failures include capacitance,  $\tan \delta$  and insulation resistance values, which do not meet the requirements after endurance test.

Degradation failures include capacitance,  $\tan \delta$  and insulation resistance values, which are between initial values as given in the data sheet, and the requirements after endurance test.

The determination of failure rates is based on the rated conditions as stated in MIL-HDBK-217D. All the test results should be interpreted as results under rated conditions even if the temperature and voltage exceed the rated values.

The field result value has been obtained from measurements in applications with very low environmental stress, at  $\frac{1}{2} \times$  rated voltage (d.c.), continuous operation, and equipment temperature between 10 and  $55^\circ C$ .

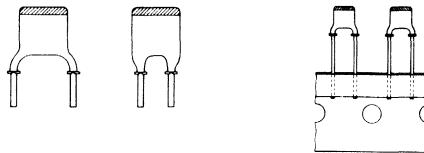

**MINIATURE CERAMIC PLATE CAPACITORS**

## MINIATURE CERAMIC PLATE CAPACITORS

class 2

- General purpose
- Coupling and decoupling
- Space saving

Climatic category (IEC 68)	10/055/21	55/085/21	55/085/21

### APPLICATION

Electronic circuits where a non-linear change of capacitance with temperature is permissible and very low losses are not essential, e.g. coupling and decoupling.

Because of their small size and their availability with a pitch of 2,54 mm over the whole range, the capacitors are ideal for circuitry with a high component density.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized. The tinned connecting leads are secured with a high melting point solder. The leads are provided with a flange that guarantees leads without lacquer, making these capacitors perfectly suited for automatic insertion.

The capacitors are protected by several layers of tan lacquer that ensures a good behaviour under humid conditions and is resistant to all commonly used cleaning solvents.

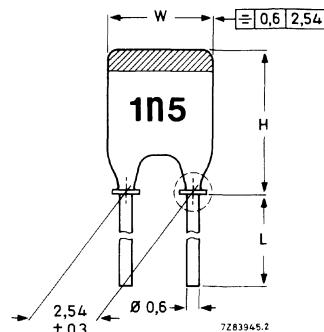

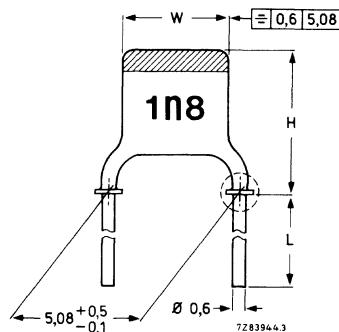

No silver migration can occur.

\* 3 dots to be replaced by code for capacitance value, see Tables 3, 4 and 5.

Table 2

size	W(mm)	H(mm)		approx. mass g
		Fig. 1	Fig. 2	
I	3,6(-1,1)	6,3(-1,8)	5,0(-1,5)	0,14
IIA	3,9(-1,2)	6,7(-1,8)	5,3(-1,5)	0,15
IIB	4,5(-1,2)	7,3(-1,8)	6,0(-1,5)	0,15
III	5,1(-0,9)	7,9(-1,7)	6,6(-1,4)	0,17
IV	6,2(-1,0)	9,0(-1,7)	7,7(-1,4)	0,20

Note: Tolerances are given between brackets.

The thickness of the capacitors does not exceed 2,3 mm (0,08 in), except for one type as is indicated in Table 4.

#### Marking

The body of the capacitors is tan coloured. The capacitors also have a colour mark on top indicating the temperature dependence of the capacitance; green for type 2222 629, yellow for type 2222 630, and blue for type 2222 640. The capacitance value is indicated on the body by figures according to Tables 3, 4 and 5 in a contrasting colour.

#### Mounting

When bending and cutting or flattening the leads, one should relieve them of the applied load at the capacitor body.

Soldering conditions                   max. 270 °C, max. 10 s

The capacitors are mounted on printed-wiring boards (hand mounting or automatic insertion). Due to the flange on the leads solder connections are free from lacquer. The flange is provided with a degassing groove.

#### PACKING

See "General Data on Miniature ceramic plate capacitors", section "Packing".

## MINIATURE CERAMIC PLATE CAPACITORS

class 1, 500 V (d.c.)

- High-frequency circuits
- Temperature compensating
- High stability
- Space saving

### QUICK REFERENCE DATA

Capacitance range	0,47 to 270 pF (E12 series)
Rated d.c. voltage	500 V
Tolerance on capacitance	± 2% or ± 0,25 pF
Temperature coefficients	P100, NPO, N150, N750, N1500
Sectional specification	IEC 384-8, sub-class 1B
Climatic category (IEC 68)	55/085/21

### APPLICATION

In a great variety of electronic circuits, e.g. in filters and tuning circuits where high stability and/or temperature compensation are needed. Because of their small size the capacitors are very suitable for circuitry with high component density.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized and provided with connecting leads. They are insulated by a coating that ensures a good behaviour under humid conditions. The colour of the capacitor body is grey. The capacitors distinguish themselves by small dimensions and narrow tolerances on the lead spacing. The leads are provided with a flange, that guarantees leads without lacquer, making them perfectly suited for automatic insertion. The electrical properties are characterized by low losses, a very close standard tolerance on the capacitance ( $\pm 0,25$  pF or 2%), high stability and, owing to the absence of silver, an extremely good d.c. behaviour.

2222 653  
2222 654

## MECHANICAL DATA

Dimensions in mm

### Outlines

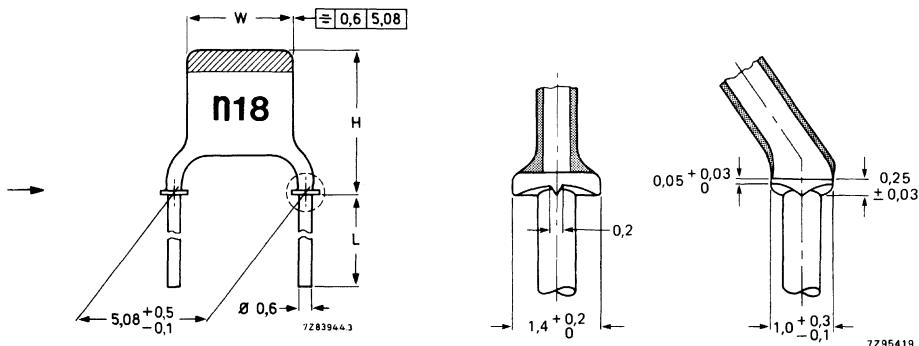

Fig. 1.

### DETAIL

For dimensions H and W see Table 2.

The lead length (L) is shown in Table 1 for bulk packed capacitors; for taped capacitors it can be found in section "Packing" of "General Data on Miniature ceramic plate capacitors".

Table 1

pitch	lead diam	catalogue number *		
		bulk packed		on tape on reel
		L ≥ 13 mm	L = 4 ± 0,5 mm	
5,08 mm (0,2 in)	0,6 mm (0,024 in)	2222 652 .....	2222 653 .....	2222 654 .....

Table 2

size	W	H	approx. mass g
I	3,6(-1,1)	6,3(-1,8)	0,15
IIA	3,9(-1,2)	6,7(-1,8)	0,15
IIB	4,5(-1,2)	7,3(-1,8)	0,16
III	5,1(-0,9)	7,9(-1,7)	0,17
IV	6,2(-1,0)	9,0(-1,7)	0,21
V	6,2(-1,0)	11,2(-2,1)	0,23

Note: Tolerances are given between brackets.

Except for the types indicated in Tables 3 to 7, the thickness of the capacitor does not exceed 2,3 mm.

\* For catalogue number suffix see Tables 3 to 7.

**Marking**

The temperature coefficient is indicated by a colour code as per IEC and EIA recommendations. The capacitance value and the voltage are indicated on the body by figures in a contrasting colour, see Tables 3 to 7.

**Mounting**

When bending, cutting or flattening the leads, they should be relieved of the applied load at the capacitor body,

Soldering conditions                    max. 270 °C, max. 10 s

The capacitors are mounted on printed-wiring boards (hand mounting or automatic insertion). Due to the flange on the leads solder connections are free from lacquer. The flange is provided with a degassing groove.

**PACKING**

See "General Data on Miniature ceramic plate capacitors", section "Packing".

**ELECTRICAL DATA**

The capacitors meet the essential requirements of IEC 384-8. Unless stated otherwise all electrical values apply at an ambient temperature of  $20 \pm 1$  °C, an atmospheric pressure of 86 to 106 kPa and a relative humidity of 63 to 67%.

Capacitance values* and tolerances, measured at 1 MHz, $\leq 5$ V	0,47 to 270 pF, E12 series, see Tables 3 to 7
Rated d.c. voltage	500 V
Test voltage (d.c.) for 1 minute	1250 V
Test voltage (d.c.) of coating for 1 minute	1250 V

## MINIATURE CERAMIC PLATE CAPACITORS

class 2, 500 V (d.c.)

- General purpose
- Coupling and decoupling
- Space saving

### QUICK REFERENCE DATA

Capacitance range	100 - 2700 pF (E12 series)
Rated d.c. voltage	500 V
Tolerance on capacitance	± 10%
Sectional specification	IEC 384-9 (2C2)
Climatic category (IEC 68)	55/085/21

### APPLICATION

Electronic circuits where a non-linear change of capacitance with temperature is permissible and very low losses are not essential, e.g. coupling and decoupling.

Because of their small size the capacitors are ideal for circuitry with a high component density.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized. The tinned connecting leads are secured with a high melting point solder. The leads are provided with a flange that guarantees leads without lacquer, making these capacitors perfectly suited for automatic insertion.

The capacitors are protected by several layers of tan lacquer that ensures a good behaviour under humid conditions and is resistant to all commonly used cleaning solvents.

No silver migration can occur.

**MECHANICAL DATA**

Dimensions in mm

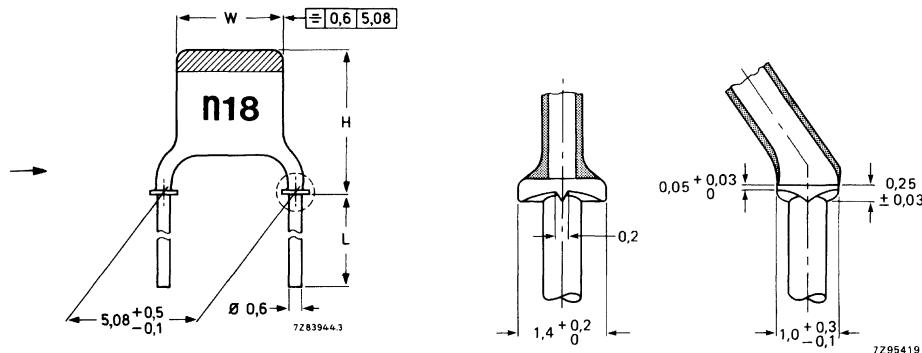

**Outlines**

Fig. 1.

**DETAIL**

For dimensions H and W see Table 2.

The lead length (L) is shown in Table 1 for bulk packed capacitors; for taped capacitors it can be found in section "Packing" of "General Data on Miniature ceramic plate capacitors".

**Table 1**

pitch	lead diam	catalogue number *			
		bulk packed		on tape on reel	on tape in ammopack
		L ≥ 13 mm	L = 4 ± 0,5 mm		
5,08 mm (0,2 in)	0,6 mm (0,024 in)	2222 655 09 ...	2222 655 19 ...	2222 655 53 ...	2222 655 63 ...

**Table 2**

size	W	H	approx. mass g
I	3,6(-1,1)	6,3(-1,8)	0,15
IIA	3,9(-1,2)	6,7(-1,8)	0,15
IIB	4,5(-1,2)	7,3(-1,8)	0,15
III	5,1(-0,9)	7,9(-1,7)	0,17
IV	6,2(-1,0)	9,0(-1,7)	0,21
V	6,2(-1,0)	11,2(-2,1)	0,23

Note: Tolerances are given between brackets.

Except for a few types as indicated in Table 3, the thickness of the capacitor does not exceed 2,3 mm.

\* 3 dots to be replaced by code for capacitance value, see Table 3.

### Marking

The body of the capacitors is tan coloured.

The temperature dependence is indicated by a yellow colour cap. Capacitance value and voltage are indicated on the body by figures according to Table 3 in a contrasting colour.

### Mounting

When bending, cutting or flattening the leads, one should relieve them of the applied load at the capacitor body.

Soldering conditions      max. 270 °C, max. 10 s

The capacitors are mounted on printed-wiring boards (hand mounting or automatic insertion). Due to the flange on the leads solder connections are free from lacquer. The flange is provided with a degassing groove.

### PACKING

See "General Data on Miniature ceramic plate capacitors", section "Packing".

### ELECTRICAL DATA

The capacitors meet the essential requirements of IEC 384-9. Unless stated otherwise all electrical values apply at an ambient temperature of  $20 \pm 1$  °C, an atmospheric pressure of 86 to 106 kPa and a relative humidity of 63 to 67%.

## MINIATURE CERAMIC PLATE CAPACITORS

class 1

- High-frequency circuits
- Temperature compensating
- High stability
- Space saving

### QUICK REFERENCE DATA

Capacitance range	0,56 to 560 pF (E12 series)
Rated d.c. voltage	100 V
Tolerance on capacitance	± 2% or ± 0,25 pF
Temperature coefficients	P100, NPO, N075, N150, N220 N330, N470, N750, N1500
Sectional specification	IEC 384-8, sub-class 1B
Climatic category (IEC 68)	55/085/21

### APPLICATION

In a wide variety of electronic equipment, e.g. as temperature compensating capacitors in tuning circuits and filters, as coupling and decoupling capacitors in high-frequency circuits where low losses and good d.c. behaviour are required.

Because of their small size and their availability with a pitch of 2,54 mm over the whole range, the capacitors are ideal for circuitry with a high component density.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized and provided with connecting leads. They are insulated by a coating that ensures a good behaviour under humid conditions. The colour of the capacitor body is grey. The capacitors distinguish themselves by small dimensions and narrow tolerances on the lead spacing. They are available with different lead shapes. The leads are provided with a flange, that guarantees leads without lacquer, making them perfectly suited for automatic insertion.

The electrical properties are characterized by low losses, a very close standard tolerance on the capacitance ( $\pm 0,25$  pF or 2%), high stability and, owing to the absence of silver, an extremely good d.c. behaviour.

(Capacitors with silver electrodes suffer from the "silver migration" effect. Silver particles move from one electrode to the other under the influence of a d.c. voltage and moisture. Capacitors with silver electrodes are considerably larger.)

I	3,6(-1,1)	6,3(-1,8)	5,0(-1,5)	0,14
IIA	3,9(-1,2)	6,7(-1,8)	5,3(-1,5)	0,15
IIB	4,5(-1,2)	7,3(-1,8)	6,0(-1,5)	0,15
III	5,1(-0,9)	7,9(-1,7)	6,6(-1,4)	0,17
IV	6,2(-1,0)	9,0(-1,7)	7,7(-1,4)	0,20
V	6,2(-1,0)	11,2(-2,1)	9,9(-1,8)	0,20

Note: Tolerances are given between brackets.

The thickness of the capacitors does not exceed 2,3 mm (0,08 in), except for a few types as is indicated in Tables 3 to 11.

#### Marking

The temperature coefficient is indicated by a colour code as per IEC and EIA recommendations.  
The capacitance value is indicated on the body by figures in a contrasting colour.

#### Mounting

When bending, cutting or flattening the leads, they should be relieved of the applied load of the capacitor body,

Soldering conditions      max. 270 °C, max. 10 s

The capacitors are mounted on printed-wiring boards (hand mounting or automatic insertion). Due to the flange on the leads solder connections are free from lacquer. The flange is provided with a degassing groove.

#### PACKING

See "General Data on Miniature ceramic plate capacitors", section "Packing".

2222 678 to  
2222 683;  
2222 688; 689

#### ELECTRICAL DATA

The capacitors meet the essential requirements of IEC 384-8. Unless stated otherwise all electrical values apply at an ambient temperature of  $20 \pm 1^\circ\text{C}$ , an atmospheric pressure of 86 to 106 kPa and a relative humidity of 63 to 67%.

Capacitance values* and tolerances, measured at 1 MHz, $\leq 5\text{ V}$	see Tables 3 to 11
Rated d.c. voltage	100 V
Test voltage (d.c.) for 1 min	300 V
Test voltage (d.c.) of coating for 1 min	300 V
Insulation resistance after 1 min at 100 V (d.c.)	$\geq 10\,000\,\text{M}\Omega$
Tan $\delta^*$ at 1 MHz, $\leq 5\text{ V}$ for $C \leq 50\,\text{pF}$	$\leq 15\left(\frac{15}{C} + 0,7\right) \times 10^{-4}$ ; max. $55 \times 10^{-4}$
for $C > 50\,\text{pF}$	$\leq 15 \times 10^{-4}$
Category temperature range	-55 to +85 °C
Storage temperature range	-55 to +85 °C
Climatic category, IEC 68	55/085/21

\* Including 2 mm per connecting lead.

## Capacitors with a temperature coefficient P100, rated voltage 100 V (d.c.)

Capacitance range	0,56 to 47 pF (E12 series)
Temperature coefficient of the capacitance ( $\frac{\Delta C}{C \cdot \Delta T}$ )	+ 100 $\times 10^{-6}/K$
Tolerance on the temperature coefficient for C < 20 pF	(-40 to + 120) $\times 10^{-6}/K$
for C ≥ 20 pF	± 40 $\times 10^{-6}/K$
Marking colour of the temperature coefficient	red/violet

## MINIATURE CERAMIC PLATE CAPACITORS

class 1, 500 V (d.c.)

- High-frequency circuits
- Temperature compensating
- High stability
- Space saving

### QUICK REFERENCE DATA

Capacitance range	0,47 to 270 pF (E12 series)
Rated d.c. voltage	500 V
Tolerance on capacitance	± 2% or ± 0,25 pF
Temperature coefficients	P100, NPO, N150, N750, N1500
Sectional specification	IEC 384-8, sub-class 1B
Climatic category (IEC 68)	55/085/21

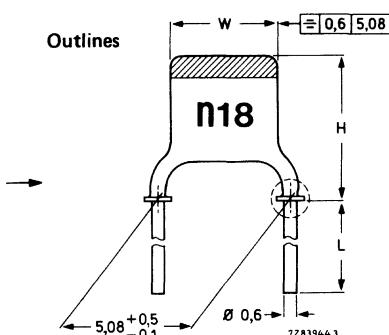

### APPLICATION

In a great variety of electronic circuits, e.g. in filters and tuning circuits where high stability and/or temperature compensation are needed. Because of their small size the capacitors are very suitable for circuitry with high component density.

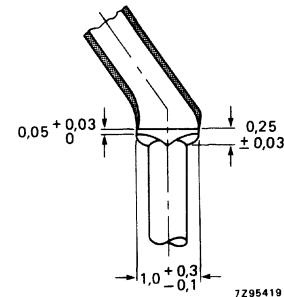

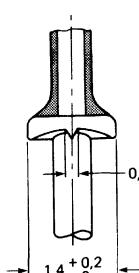

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized and provided with connecting leads. They are insulated by a coating that ensures a good behaviour under humid conditions. The colour of the capacitor body is grey. The capacitors distinguish themselves by small dimensions and narrow tolerances on the lead spacing. The leads are provided with a flange, that guarantees leads without lacquer, making them perfectly suited for automatic insertion.

The electrical properties are characterized by low losses, a very close standard tolerance on the capacitance ( $\pm 0,25$  pF or 2%), high stability and, owing to the absence of silver, an extremely good d.c. behaviour.

**MECHANICAL DATA****Outlines**

Dimensions in mm

DETAIL

For dimensions H and W see Table 1.

The lead length (L) is shown in section "Packing" of "General Data on Miniature ceramic plate capacitors".

	W	H	approx. mass g
I	3,6(-1,1)	6,3(-1,8)	0,15
IIA	3,9(-1,2)	6,7(-1,8)	0,15
IIB	4,5(-1,2)	7,3(-1,8)	0,16
III	5,1(-0,9)	7,9(-1,7)	0,17
IV	6,2(-1,0)	9,0(-1,7)	0,21
V	6,2(-1,0)	11,2(-2,1)	0,23

Except for the types indicated in Tables 2 to 6, the thickness of the capacitor does not exceed 2,3 mm.

**Marking**

The temperature coefficient is indicated by a colour code as per IEC and EIA recommendations. The capacitance value and the voltage are indicated on the body by figures in a contrasting colour, see Tables 2 to 6.

**Mounting**

When bending, cutting or flattening the leads, they should be relieved of the applied load at the capacitor body,

Soldering conditions                   max. 270 °C, max. 10 s

The capacitors are mounted on printed-wiring boards (hand mounting or automatic insertion). Due to the flange on the leads solder connections are free from lacquer. The flange is provided with a degassing groove.

**PACKING**

The capacitors are supplied on tape in ammunition packing; see "General Data on Miniature ceramic plate capacitors", section "Packing".

**ELECTRICAL DATA**

The capacitors meet the essential requirements of IEC 384-8. Unless stated otherwise all electrical values apply at an ambient temperature of  $20 \pm 1^\circ\text{C}$ , an atmospheric pressure of 86 to 106 kPa and a relative humidity of 63 to 67%.

Capacitance values\* and tolerances,

## TESTS AND REQUIREMENTS

### Class 1 capacitors

After manufacture, each capacitor is checked on capacitance,  $\tan \delta$  and test voltage. Apart from this the following quality checks are carried out by frequent inspections.

Essentially all tests mentioned in the schedule of IEC publication 384-8, category 55/085/21 (temperature range  $-55/+85^\circ\text{C}$ ; damp heat, long term, 21 days) are carried out along the lines of IEC publication 68.

IEC 384-8 clause	IEC 68-2 test method	name of test	procedure	requirements
—	—	Robustness of terminations Pull-off	Pull velocity 15 cm/min, load 5 N axial force 10 N	no wire breakage or complete damage of capacitor
10.1	Ua	Tensile strength	Load 5 N, 4 x 90°	no wire breakage
10.1	Ub	Bending	solderability: 2 s 235 °C	good tinning
10.2.1	Ta method 1	Soldering	270 °C, 10 s	no visible damage $\Delta C/C \pm 0,5\%$ or 0,5 pF after 1 h to 2 h
10.2.2	Tb method 1A	Resistance to soldering heat	30 min $-55^\circ\text{C}$ /30 min $+85^\circ\text{C}$ , 5 cycles	no damage, after 24 h $\Delta C/C \pm 0,5\%$ or 0,5 pF
10.3	Na	Rapid change of temperature	10-55-10 Hz 0,75 mm displacement 3 directions, 6 h	no visible damage
10.4	Fc	Vibration	4000 bumps in 2 directions, 40g; pulse time 6 ns	no visible damage
10.5	Eb	Bump	15 s, 35 mm above bunsen burner with flame-height 40-60 mm	self-extinguishing within 15 s after removal of bunsen burner
—	—	Inflammability	between + 20 and $-55^\circ\text{C}$ , and between + 20 and $+85^\circ\text{C}$	within tolerance as specified for each particular material
9.5	—	Temperature coefficient	—	—

IEC 384-8 clause	IEC 68-2 test method	name of test	procedure	requirements
10.6.2	B	Climatic sequence Dry heat	16 h + 85 °C	no visible damage
10.6.3	Db	Damp heat (accel.) 1st cycle	12 h + 55 °C, 90 to 96% R.H. 12 h + 25 °C, 95 to 100% R.H.	after recovery of 1-2 h immediately followed by cold test
10.6.4	A	Cold	2 h -55 °C	no visible damage
10.6.5	M	Low air pressure	1 h 8.5 kPa, last 2 min rated voltage	no breakdown or flashover
10.6.6	Db	Damp heat (accel.) remaining cycle	12 h + 55 °C, 90 to 96% R.H. 12 h + 25 °C, 95 to 100% R.H.	$\Delta C/C \pm \leq 1\%$ or 1 pF $\tan \delta \leq 2 \times$ specified tan $\delta$ Rins after 1-2 h: > 5000 MΩ for 2222 650 to 654, 691, > 100 MΩ for other types
10.7	Ca	Damp heat, steady state (half number of the lot at rated voltage, other half at zero voltage)	21 days + 40 °C 90 to 95% R.H.	$\Delta C/C \pm \leq 1\%$ or 1 pF $\tan \delta \leq 2 \times$ specified tan $\delta$ Rins after 1-2 h: > 5000 MΩ for 2222 650 to 654, 691, > 100 MΩ for other types
10.8	-	Endurance	1000 h at + 85 °C; 2222 650 to 654, 691: 750 V (d.c.), other types: 150 V (d.c.)	$\Delta C/C \pm \leq 1\%$ or 1 pF $\tan \delta \leq 1.5 \times$ specified tan $\delta$ Rins: > 3000 MΩ for 2222 650 to 654, 691, > 300 MΩ for other types
-	-	Resistance to solvents	3 min ultrasonic washing in trichloroethylene 1 min drying, 30 °C 10 brush strokes	marking and colour code must remain legible and not be discoloured; no mechanical or electrical damage or deterioration of the material
-	H	Storage	72 h -65 °C, recovery 1-2 h	electrical parameters within specification

# MINIATURE CERAMIC PLATE CAPACITORS

## Class 2 capacitors

After manufacturing each capacitor is checked on capacitance,  $\tan \delta$  and test voltage. Apart from this the following quality checks are carried out by frequent inspections.

Essentially all tests mentioned in the schedule of IEC publication 384-9, category 55/085/21 (temperature range  $-55/85^{\circ}\text{C}$ ; damp heat; long term, 21 days) are carried out along the lines of IEC publication 68.

IEC-384-9 clause	IEC 68-2 test method	name of test	procedure	requirements
		Robustness of terminations Pull-off	pull velocity 15 cm/min, load 5 N axial force 10 N	no wire breakage or complete damage of capacitor
10.1	Ua	Tensile strength	load 5 N, 4 $\times$ 90°	no wire breakage
10.1	Ub	Bending (half number of samples)	solderability: 2 s at 235 $^{\circ}\text{C}$	good tinning

## APPLICATION

In a great variety of electronic circuits where a non-linear change of capacitance with temperature is permissible and very low losses are not of major importance, e.g. coupling and decoupling purposes. Because of their small dimensions and close tolerance on lead-spacing the capacitors are very suitable for circuitry with a high component density.

## DESCRIPTION

The capacitors consists of a thin rectangular ceramic plate, both sides being metallized and provided with solder-coated connecting leads that are fixed with solder having a high melting point.

The capacitors are protected by several layers of lacquer that ensures a good behaviour under humid conditions and is resistant against commonly used cleaning solvents. They are tan coloured. No silver migration can occur.

Table 2

size	W	H	approx.
	mm	mm	mass g
I	3,6(-1,1)	3,7(-1,2)	0,14
IIA	3,9(-1,2)	4,0(-1,3)	0,15
IIB	4,5(-1,2)	4,7(-1,4)	0,16
III	5,1(-0,9)	5,3(-1,1)	0,17
IV	6,2(-1,0)	6,4(-1,2)	0,20

Note: Tolerances are given between brackets

The thickness of the capacitors does not exceed 2,3 mm (0,09 in), except for the type as is indicated in Table 4.

#### Lacquer on the leads

When capacitors shown in Figs 1 and 2 are mounted on printed-wiring boards with a thickness of 1,5 mm and with holes of 1,3 mm diameter or on printed-wiring boards with a thickness of 1 mm and with holes of 0,8 mm diameter, there will be no lacquer on the leads at the lower side of the board. For the capacitance value indicated with an asterisk in Table 4, and lead pitch of 5,08 mm, the lacquer on the leads is less than 2 mm.

## Marking

The body of the capacitors is tan coloured. The capacitors also have a colour mark on top indicating the temperature dependence of the capacitance; green for type 2222 629, yellow for type 2222 630 and blue for type 2222 640. The capacitance value is indicated on the body by figures according to Tables 3, 4 and 5 in a contrasting colour.

## Mounting

When bending, cutting or flattening the leads, one should relieve them of the applied load at the capacitor body.

Soldering conditions max. 270 °C, max. 10 s

## PACKING

The capacitors are supplied in boxes of 1000 (sizes I, II A, II B, III) or 500 (size IV).

## MINIATURE CERAMIC PLATE CAPACITORS

class 1,

- High-frequency circuits
- Temperature compensating
- High stability
- Space saving

### QUICK REFERENCE DATA

Capacitance range	0,56 to 560 pF (E12 series)
Rated d.c. voltage	100 V
Tolerance on capacitance	± 2% or ± 0,25 pF
Temperature coefficients	P100, NPO, N075, N150, N220 N330, N470, N750, N1500
Sectional specification	IEC 384-8, sub-class 1B
Climatic category (IEC 68)	55/085/21

### APPLICATION

In a wide variety of electronic equipment, e.g. as temperature compensating capacitors in tuning circuits and filters, as coupling and decoupling capacitors in high-frequency circuits where low losses and good d.c. behaviour are required.

Their small dimensions are an advantage in all cases where space-saving is important.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides being metallized and provided with connecting leads. They are insulated by a coating method that ensures an excellent behaviour under humid conditions. The colour of the capacitor body is grey. The capacitors distinguish themselves by small dimensions, narrow tolerances on the lead spacing and very little and well defined lacquer on the leads. The electrical properties are characterized by low losses, a very close standard tolerance on the capacitance ( $\pm 0,25$  pF or 2%), high stability and, owing to the absence of silver, an extremely good d.c. behaviour.

(Capacitors with silver electrodes suffer from the "silver migration" effect. Silver particles move from one electrode to the other under the influence of a d.c. voltage and moisture. Capacitors with silver electrodes are considerably larger.)

2222 631  
2222 638  
2222 641; 642

### MECHANICAL DATA

IV	6,2 (-1,0)	6,4 (-1,2)	0,20
V	6,2 (-1,0)	8,6 (-1,6)	0,20

Note: Tolerances are given between brackets

The thickness of the capacitors does not exceed 2,3 mm (0,08 in), except for a few types as is indicated in Tables 3 to 11.

#### Lacquer on the leads

When capacitors shown in Figs 1 and 2 are mounted on printed-wiring boards with a thickness of 1,5 mm and with holes of 1,3 mm diameter, or on printed-wiring boards with a thickness of 1 mm and with holes of 0,8 mm diameter, there will be no lacquer on the leads at the lower side of the board.

For those capacitance values indicated with asterisks in Tables 3 to 10, and lead pitch of 5,08 mm, the lacquer on the leads is less than 2 mm.

## Marking

The temperature coefficient is indicated by a colour code as per IEC and EIA recommendations. The capacitance value is indicated on the body by figures in a contrasting colour.

## Mounting

When bending, cutting or flattening the leads, they should be relieved of the applied load at the capacitor body.

Soldering conditions max. 270 °C, max. 10 s

## **PACKING**

The capacitors are supplied in boxes of 1000 (sizes I, II A, II B, III) or 500 (sizes IV, V).

### ELECTRICAL DATA

The capacitors meet the essential requirements of IEC 384-8. Unless stated otherwise all electrical values apply at an ambient temperature of  $20 \pm 1$  °C, an atmospheric pressure of 86 to 106 kPa and a relative humidity of 63 to 67%.

## MINIATURE CERAMIC PLATE CAPACITORS

class 1, 500 V (d.c.)

- High-frequency circuits
- Temperature compensating
- High stability
- Space saving

## QUICK REFERENCE DATA

Capacitance range	0,47 to 270 pF (E12 series)
Rated d.c. voltage	500 V
Tolerance on capacitance	± 2% or ± 0,25 pF
Temperature coefficients	P100, NP0, N150, N750, N1500
Sectional specification	IEC 384-8, sub-class 1B
Climatic category (IEC 68)	55/085/21

## APPLICATION

In a great variety of electronic circuits, e.g. in filters and tuning circuits where high stability and/or temperature compensation are needed. Because of their small size the capacitors are very suitable for circuitry with high component density.

## DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized and provided with connecting leads. They are insulated by a coating that ensures a good behaviour under humid conditions. The colour of the capacitor body is grey. The capacitors distinguish themselves by small dimensions and narrow tolerances on the lead spacing.

The electrical properties are characterized by low losses, a very close standard tolerance on the capacitance ( $\pm 0,25$  pF or 2%), high stability and, owing to the absence of silver, an extremely good d.c. behaviour.

## MECHANICAL DATA

Dimensions in mm

### Outlines

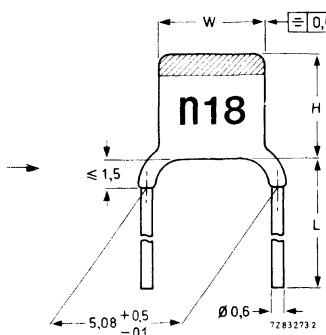

Table 1

pitch	lead diameter	catalogue number *	
		L ≥ 13 mm	L = 4 ± 0,5
5,08 mm (0,2 in)	0,6 mm (0,024 in)	2222 650 . . . .	2222 651 . . . .

Fig. 1.

For dimensions H, L and W, see Tables 1 and 2.

Table 2

size	W	H	approx. mass g
I	3,6(-1,1)	3,7(-1,2)	0,15
IIA	3,9(-1,2)	4,0(-1,3)	0,15
IIB	4,5(-1,2)	4,7(-1,4)	0,16
III	5,1(-0,9)	5,3(-1,1)	0,17
IV	6,2(-1,0)	6,4(-1,2)	0,21
V	6,2(-1,0)	8,6(-1,5)	0,23

Note: Tolerances are given between brackets.

Except for the types indicated in Tables 3 to 7, the thickness of the capacitor does not exceed 2,3 mm.

### Lacquer on the leads

When the capacitors are mounted on printed-wiring boards with a thickness of 1,5 mm and with holes of 1,3 mm diameter or on printed-wiring boards with a thickness of 1 mm and with holes of 0,8 mm diameter, there will be no lacquer on the leads at the lower side of the board. For those capacitance values indicated with asterisks in Tables 3 to 7, the lacquer on the leads is less than 2 mm.

### Marking

The temperature coefficient is indicated by a colour code as per IEC and EIA recommendations. The capacitance value and the voltage are indicated on the body by figures in a contrasting colour, see Tables 3 to 7.

### Mounting

When bending, cutting or flattening the leads, they should be relieved of the applied load at the capacitor body,

Soldering conditions      max. 270 °C, max. 10 s

### PACKING

The capacitors are packed in boxes of 1000 (sizes I, IIA, IIB, III) or 500 (sizes IV and V).

\* For catalogue number suffix, see Tables 3 to 7.

**ELECTRICAL DATA**

The capacitors meet the essential requirements of IEC 384-8. Unless stated otherwise all electrical values apply at an ambient temperature of  $20 \pm 1$  °C, an atmospheric pressure of 86 to 106 kPa and a relative humidity of 63 to 67%.

Capacitance values* and tolerances, measured at 1 MHz, $\leq 5$ V	0,47 to 270 pF, E12 series, see Tables 3 to 7
Rated d.c. voltage	500 V
Test voltage (d.c.) for 1 minute	1250 V
Test voltage (d.c.) of coating for 1 minute	1250 V
Insulation resistance at 500 V (d.c.) after 1 min	$> 10\,000\,M\Omega$
Tan $\delta^*$ at 1 MHz, $\leq 5$ V for $C < 50$ pF	$\leq 15 \left( \frac{15}{C} + 0,7 \right) \cdot 10^{-4}$
for $C > 50$ pF	$\leq 15 \cdot 10^{-4}$
Category temperature range	-55 to + 85 °C
Storage temperature range	-55 to + 85 °C
Climatic category (IEC 68)	55/085/21

\* Including 2 mm per connecting lead.

## MINIATURE CERAMIC PLATE CAPACITORS

class 2, 500 V (d.c.)

- General purpose
- Coupling and decoupling
- Space saving

### QUICK REFERENCE DATA

Capacitance range	100 - 2700 pF (E12 series)
Rated d.c. voltage	500 V
Tolerance on capacitance	± 10%
Sectional specification	IEC 384-9 (2C2)
Climatic category (IEC 68)	55/085/21

### APPLICATION

Electronic circuits where a non-linear change of capacitance with temperature is permissible and very low losses are not essential, e.g. coupling and decoupling.

Because of their small size the capacitors are ideal for circuitry with a high component density.

### DESCRIPTION

The capacitors consist of a thin rectangular ceramic plate, both sides of which are metallized. The tinned connecting leads are secured with a high melting point solder.

The capacitors are protected by several layers of tan lacquer that ensures a good behaviour under humid conditions and is resistant to all commonly used cleaning solvents.

No silver migration can occur.

## MECHANICAL DATA

Dimensions in mm

## Outlines

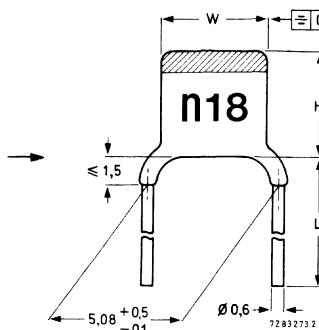

Fig. 1.

For dimensions H, L and W, see Tables 1 and 2.

Table 2

size	W	H	approx. mass g
I	3,6 (-1,1)	3,7 (-1,2)	0,15
IIA	3,9 (-1,2)	4,0 (-1,3)	0,15
IIB	4,5 (-1,2)	4,7 (-1,4)	0,16
III	5,1 (-0,9)	5,3 (-1,1)	0,17
IV	6,2 (-1,0)	6,4 (-1,2)	0,21
V	6,2 (-1,0)	8,6 (-1,5)	0,23

Note: Tolerances are given between brackets.

Except for the types indicated in Table 3, the thickness of the capacitor does not exceed 2,3 mm.

## Lacquer on the leads

When the capacitors are mounted on printed-wiring boards with a thickness of 1,5 mm and with holes of 1,3 mm diameter or on printed-wiring boards with a thickness of 1 mm and with holes of 0,8 mm diameter there will be no lacquer on the leads at the lower side of the board. For those capacitance values indicated with asterisks in Table 3, the lacquer on the leads is less than 2 mm.

## Marking

The body of the capacitors is tan coloured.

The temperature dependence is indicated by a yellow colour cap. Capacitance value and voltage are indicated on the body by figures according to Table 3 in a contrasting colour.

## Mounting

When bending, cutting or flattening the leads, one should relieve them of the applied load at the capacitor body.

Soldering conditions      max. 270 °C, max. 10 s

## PACKING

The capacitors are supplied in boxes of 1000 (sizes I, IIA, IIB, III) or 500 (sizes IV and V).

\* 3 dots to be replaced by code for capacitance value, see Table 3.

**ELECTRICAL DATA**

The capacitors meet the essential requirements of IEC 384-9. Unless stated otherwise all electrical values apply at an ambient temperature of  $20 \pm 1^\circ\text{C}$ , an atmospheric pressure of 86 to 106 kPa and a relative humidity of 63 to 67%.

Capacitance values, measured at 1 kHz, 1 V	100 to 2700 pF, E12 series see Table 3
Tolerance on the capacitance	$\pm 10\%$

### APPLICATION

These capacitors with high capacitance per unit volume are for surface mounted assembly. Their dimensions, performance, and reliability make them very attractive for a wide range of applications, specially where high package density is required.

Typical application areas are e.g. radio, television, cameras, pocket calculators, telecommunication and military equipment.

The taped versions are especially suitable for automatic placement.

\* Below 10 pF other values on request.

\*\* Values up to 1  $\mu$ F under development.

# CERAMIC MULTILAYER CAPACITORS

## DESCRIPTION

The capacitors consist of a rectangular block of ceramic dielectric in which a number of interleaved precious-metal electrodes yield a high capacitance per unit volume. They are AgPd (35/65) metallized or NiSn metallized at the terminations (see Fig. 1).

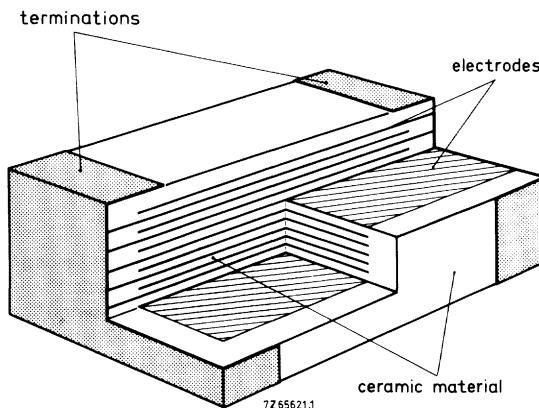

Fig. 1.

## PACKING

The capacitors are supplied in bulk in cardboard boxes of 1000; the sizes 0805, 1206 and 1210 are also supplied in tape (cardboard or blister) on reels of 4000.

Capacitors with sizes 0805 and 1206 (with the smaller tolerance) are also available in bulkpacking of 100; see Appendix II.

### Cardboard tape

dimensions	size	
	0805	1206
A <sub>0</sub>	1,5 + 0,2 0	1,85 + 0,2 0
B <sub>0</sub>	2,25 + 0,2 0	3,45 + 0,2 0

Fig. 13 Dimensions of carrier tape (mm).  
Cumulative pitch error 0,2 mm over 10 pitches.

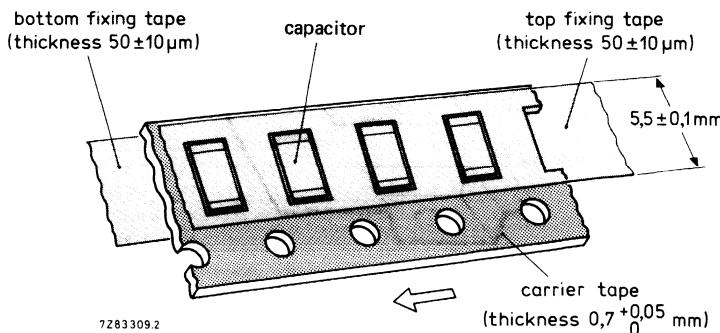

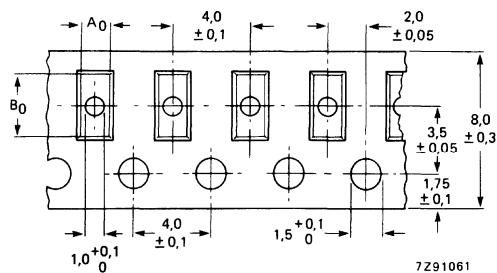

Fig. 14 Carboard tape.

# CERAMIC MULTILAYER CAPACITORS

## Blister tape

dimension	size	
	0805	1206
$A_0$	$1,55 \pm 0,1$	$1,85 \pm 0,1$
$B_0$	$2,3 \pm 0,1$	$3,55 \pm 0,1$

Fig. 15 Dimensions of carrier tape.  
Cumulative pitch error 0,2 mm over 10 pitches.

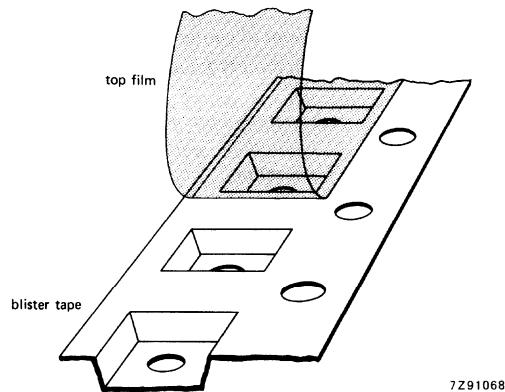

Fig. 16 Blister tape.

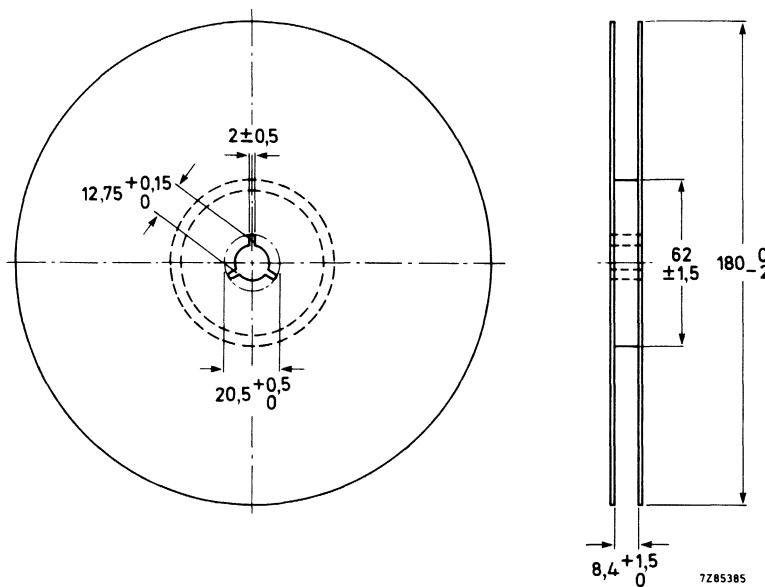

Fig. 17 Reel.

At least 40 positions at the beginning and 75 at the end of the tape are not used. The tape has a 230 mm leader.

#### SOLDER CONDITIONS

Limiting conditions

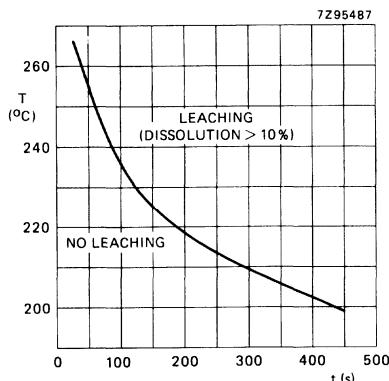

235 °C, min. 2 s, max. 100 s | see Fig. 18  
260 °C, max. 30 s |

Typical solder conditions

see Figs 19, 20 and 21

(The use of weakly Cl-activated flux is advised). ←

# CERAMIC MULTILAYER CAPACITORS

→ Fig. 18 Resistance to leaching of AgPd metallized terminations (in static solder bath) at various temperatures. For NiSn metallized terminations the leaching resistance is 10 x better than shown in the graph.

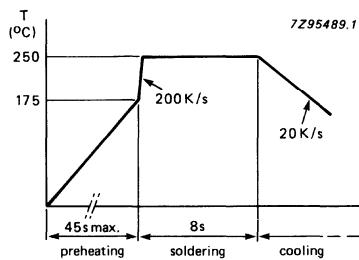

Fig. 19 Reflow soldering.

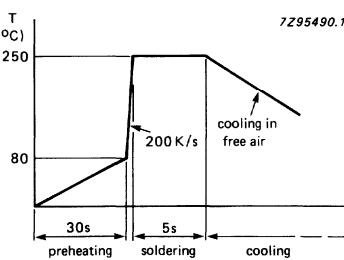

Fig. 20 Wave soldering.  
The capacitors may be soldered twice according to this method if necessary.

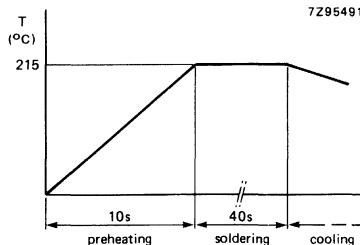

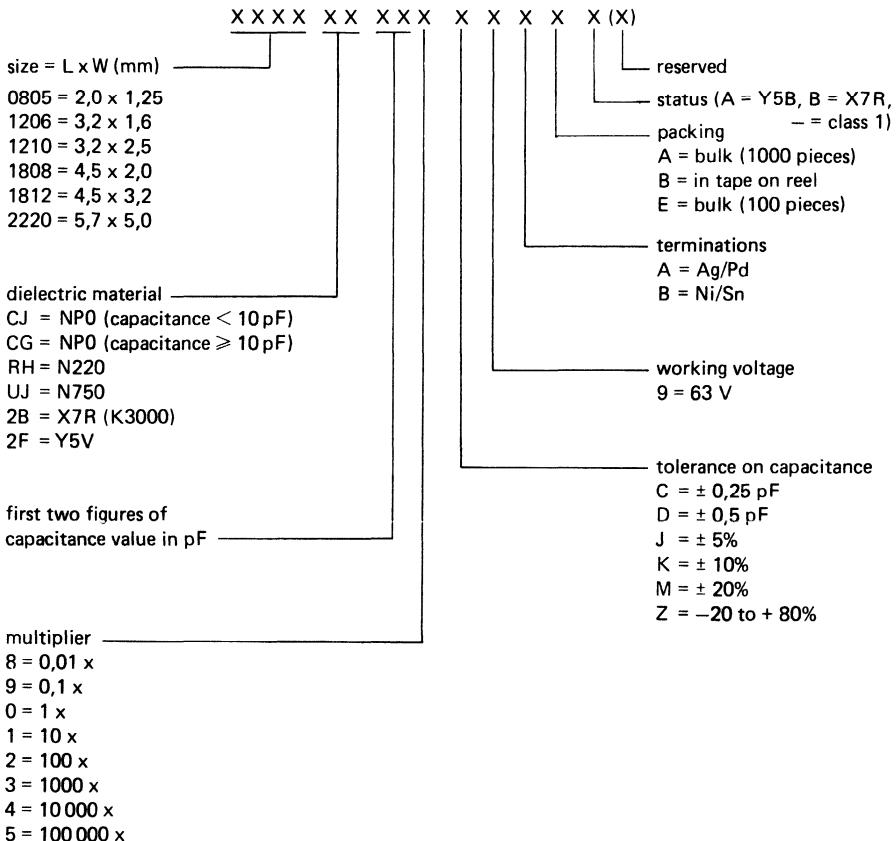

Fig. 21 Vapour phase soldering.

## **HOW TO ORDER**

One can order the capacitors by quoting the 15-digit ordering code, which can be constructed as shown below\*.

Check for availability with Tables 3, 4 and 5, and with section PACKING.

## Example

8000 capacitors, 150 pF,  $\pm$  5%, NPO dielectric, size 1206, in tape, should be ordered as:

8000 x 1206CG151J9AP - .

\* If required the 12 NC-catalogue number can be found in Appendices I and II.

# CERAMIC MULTILAYER CAPACITORS

## TESTS AND REQUIREMENTS—IEC

	IEC 384-10 par.	68.2 par.	test	procedure	requirements
4.5			Visual inspection and check of dimensions	any applicable method 10 X magnification	in accordance with specification
4.6.1			Capacitance	$C \leq 1000 \text{ pF}$ $f = 1 \text{ MHz}$ $C > 1000 \text{ pF}$ $f = 1 \text{ kHz}$ measuring voltage 1 V, $T = +20^\circ\text{C}$	within specified tolerance, class 2 1000 h after manufacturing date
4.6.2			Tan $\delta$	see 9.1	in accordance with specification
4.6.3			Insulation resistance	at 10 V (d.c.), 1 min	in accordance with specification
4.6.4			Voltage proof	2.5 UR, 1 min	no breakdown or flashover
4.7.1			Temperature coefficient, class 1	between min. and max. temperature	in accordance with specification
4.7.2			Temperature characteristic, class 2	X7R and Y5V between min. and max. temperature	in accordance with specification
4.11	Ta		Solderability	Zero hour test, and test after storage (20 to 24 months) in original packing, in normal atmosphere; unmounted chips completely immersed for $2 \pm 0.5$ s in a solder bath of $235 \pm 5^\circ\text{C}$	the terminations must be well tinned, after recovery.
4.10	Tb		Resistance to soldering heat	$260 \pm 5^\circ\text{C}$ , $10 \pm 0.5$ s	$\Delta C/C$ , class 1 : $\leq \pm 0.5\%$ or $\pm 0.5 \text{ pF}$ whichever is greater X7R : $> -5\%$ and $\leq + 10\%$ Y5V : $> -10\%$ and $\leq + 20\%$
4.8			Resistance to leaching	$260 \pm 5^\circ\text{C}$ , $30 \pm 1$ s, in static solder bath	with visual enlargement of 10x: dissolution of terminations may not exceed 10% no visible damage.
			Adhesion	a force of 5 N shall be applied normal to the line joining the terminations and in a plane parallel to the substrate	

## TESTS AND REQUIREMENTS—IEC (continued)

IEC par.	68.2 par.	test	procedure	requirements
384.10	4.9	Bond strength of end face plating	mounting according to 4.4; conditions: bending 1 mm at a rate of 1 mm/s	no visible damage; $\Delta C/C \leq 10\%$ .
4.1		Pre-conditioning class 2	X7R and Y5V : 1 h at 175 °C, then 24 h recovery	
4.12	Na	Rapid change of temperature	pre-conditioning (class 2 only) -55/+125 °C, 5 cycles	no visible damage; after 24 h recovery class 1: $\Delta C/C \leq \pm 1\%$ or 1 pF* X7R : $\Delta C/C \leq \pm 10\%$ Y5V : $\Delta C/C \leq \pm 20\%$
4.13		Climatic sequence	pre-conditioning (class 2 only)	
4.13.3	Ba	Dry heat	16 h at max. temperature	no visible damage
4.13.4	Db	Damp heat accelerated, 1 cycle	24 h, R.H. 100% at +55 °C	
4.13.5	Aa	Cold	2 h at min. temperature	no visible damage
4.13.6	Db	Damp heat accelerated, remaining cycles	at 55 °C, R.H. 100% 5 cycles of 24 h	after recovery, class 1 1-2 h, class 2 24 h $\Delta C/C$ , class 1 : $\leq \pm 2\%$ or 1 pF* X7R : $\leq \pm 10\%$ ; Y5V: $\leq \pm 20\%$ $\tan \delta$ , class 1 : $\leq 2 \times$ specified value X7R : $\leq 5\%$ Y5V : $\leq 7\%$
4.14	Ca	Damp heat, steady state		$R_{ins}$ , class 1 : $\geq 2500 \text{ M}\Omega$ or $R_{iCR} \geq 25 \text{ s}^{**}$ X7R, Y5V : $\geq 1000 \text{ M}\Omega$ or $R_{iCR} \geq 25 \text{ s}^{**}$ no visible damage; electrical: same as 4.13.6, except for $\Delta C/C$ , Y5V: $\leq \pm 30\%$

\* Whichever is greater.

\*\* Whichever is less.

packing tolerance terminations

APPENDIX II

CONVERSION LIST  
type number to 12NC-catalogue number  
for 100-piece bulk packing  
(for sampling capacitors in sizes 0805 and 1206)

**Note:** This small packing quantity is available in sizes 0805 and 1206 in all dielectrics but limited to the smaller capacitance tolerances:  $\pm 5\%$  NPO, N220 and N750;  $\pm 10\%$  X7R;  $\pm 20\%$  Y5V.

**Examples:** A 63 V ceramic multilayer capacitor of  $12 \text{ pF} \pm 5\%$ , NPO, size 0805, with Ag/Pd terminations, supplied in bag of 100 pieces, has the type number 0805CG120J9AE- and the 12NC-catalogue number 2222 851 72129, see next page.

A 63 V ceramic multilayer capacitor of  $820 \text{ pF} \pm 20\%$ , X7R, size 1206, with Ni/Sn terminations, supplied in bag of 100 pieces, has the type number 12062B821K9BEB, and the 12NC-catalogue number 2222 581 76613.

 The diagram illustrates the physical dimensions of the capacitor. It shows a central vertical axis with two horizontal lines extending from it. The top horizontal line is labeled 'packing' with arrows pointing to the right. The bottom horizontal line is labeled 'terminations' with arrows pointing to the right. The distance between these two lines is indicated by a double-headed arrow and labeled 'tolerance'. To the left of the central axis, there are two groups of dimensions: 'M' and '9 [A] [B]'. To the right of the central axis, there are two groups of dimensions: 'E' and 'A'. Above the 'A' group, the number '2222' is written above '[591]' and '[581]'. Below the 'A' group, the numbers '7' and '87' are listed. To the far right, the numbers '05', '06', '07', '08', '09', '11', and '12' are aligned vertically.
