CK00 (100/133 MHz) spread spectrum
differential system clock generator

Product specification
Supersedes data of 2000 Aug 08

2000 Nov 13

CK00 (100/133 MHz) spread spectrum differential system clock generator

PCK2022R

FEATURES

- 3.3 V operation
- Eight differential CPU clock pairs
- One IO clock at 33 MHz and 66 MHz
- Two 48 MHz clocks at 3.3 V
- One 14.318 MHz reference clock
- Power management control pins
- Host clock jitter less than 200 ps cycle-to-cycle
- Host clock skew less than 150 ps pin-to-pin
- Spread Spectrum capability

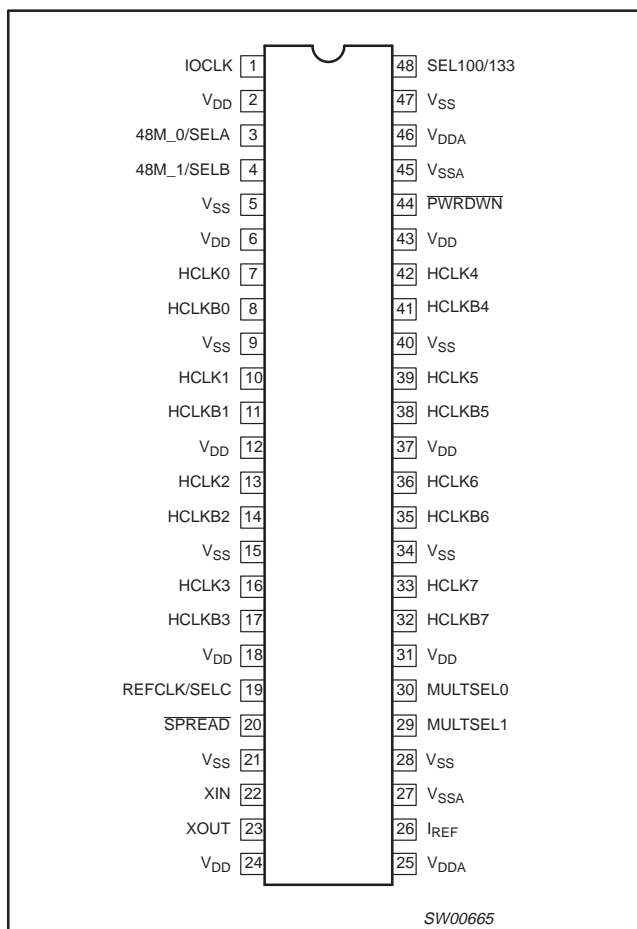

DESCRIPTION

The PCK2022R is a clock synthesizer/driver for a Pentium III™ and other similar processors

The PCK2022R has eight differential pair CPU current source outputs, one 33/66 MHz output which is configurable on power-up, two 48 MHz clocks which can be disabled on power-up, and one 3.3 V reference clock at 14.318 MHz which can also be disabled on power-up. All clock outputs meet Intel's drive strength, rise/fall times, jitter, accuracy, and skew requirements.

The part possesses a dedicated power-down input pin for power management control. This input is synchronized on chip, and ensures glitch-free output transitions. In addition, the part can be configured to disable the 48 MHz outputs for lower power operation and an increase in the performance of the functioning outputs. The IOCLK and REFCLK can also be disabled for the highest performance of the Host outputs.

PIN CONFIGURATION

ORDERING INFORMATION

PACKAGES	TEMPERATURE RANGE	ORDER CODE	DRAWING NUMBER
48-Pin Plastic TSSOP	0°C to +70°C	PCK2022R DGG	SOT362-1

Intel and Pentium III are trademarks of Intel Corporation.

CK00 (100/133 MHz) spread spectrum differential system clock generator

PCK2022R

PIN DESCRIPTION

PIN(S)	SYMBOL	FUNCTION
1	IOCLK	Dual frequency pin which can operate at either 33 MHz or 66 MHz per the selection table.
3, 4	48M_0/SELA 48M_1/SELB	3.3 V fixed 48 MHz clock outputs. During power-up pins function as latched inputs that enable SELA and SELB prior to the pins being used for output of 3 V at 48 MHz. Part must be clocked to latch data in.
7, 8	HCLK0 HCLKB0	Host output pair 0
10, 11	HCLK1 HCLKB1	Host output pair 1
13, 14	HCLK2 HCLKB2	Host output pair 2
16, 17	HCLK3 HCLKB3	Host output pair 3
42, 21	HCLK4 HCLKB4	Host output pair 4
39, 38	HCLK5 HCLKB5	Host output pair 5
36, 35	HCLK6 HCLKB6	Host output pair 6
33, 32	HCLK7 HCLKB7	Host output pair 7
19	REFCLK/SELC	3.3 V fixed 14.318 MHz output. During power-up, pin functions as a latched input that enables SELC prior to the pin being used for the clock output. Part must be clocked to latch data in.
20	SPREAD	Enables spread spectrum mode when held LOW on differential host outputs and 33 MHz IOCLK clocks. Asserts LOW.
21	XIN	Crystal input
22	XOUT	Crystal output
26	I _{REF}	This pin controls the reference current for the host pairs. This pin requires a fixed precision resistor tied to ground in order to establish the correct current.
29, 30	MULTSEL0 MULTSEL1	Select input pin used to control the scaling of the HCLK and HCLKB output current.
44	PWRDWN	Device enters power-down mode when held LOW. Asserts LOW.
48	SEL100/133	Select input pin for enabling 133 MHz or 100 MHz CPU outputs
2, 6, 12, 18, 24, 31, 37, 43	V _{DD3}	3.3 V power supply
5, 9, 15, 21, 28, 34, 40, 47	GND	Ground
25, 46	AV _{DD}	3.3 V power supply for analog circuits
27, 45	AGND	Ground for analog circuits

ABSOLUTE MAXIMUM RATINGS

SYMBOL	PARAMETER	CONDITIONS	LIMITS		UNIT
			MIN	MAX	
V_{DD3}	DC 3.3 V supply		-0.5	4.6	V
I_{IK}	DC input diode current	$V_I < 0$		-50	mA
V_I	DC input voltage	Note 2	-0.5	V_{DD}	V
I_{OK}	DC output diode current	$V_O > V_{DD}$ or $V_O < 0$		± 50	mA
V_O	DC output voltage	Note 2	-0.5	$V_{DD}+0.5$	V
I_O	DC output source or sink current	$V_O = 0$ to V_{DD}		± 50	mA
T_{stg}	Storage temperature range		-65	+150	°C
P_{tot}	Power dissipation per package plastic medium-shrink (SSOP)	For temperature range -40°C to +125°C; above +55°C derate linearly with 11.3 mW/K		850	mW

NOTES:

- Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other condition beyond those indicated under "recommended operating condition" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- The input and output voltage rating may be exceeded if the input and output current ratings are observed.

RECOMMENDED OPERATING CONDITIONS

Group offset limits

GROUP	OFFSET	MEASUREMENT LOADS (LUMPED)	MEASUREMENT POINTS	NOTES
Host to IOCLK	1.5 – 3.5 ns Host leads	IOCLK @ 30 pF	Host @ Cross point IOCLK @ 1.5 V	19, 20

NOTES TO THE AC TABLES:

- Output drivers must have monotonic rise/fall times through the specified V_{OL}/V_{OH} levels.
- Period, jitter, offset, and skew measured on rising edge at 1.5 V for 3.3 V clocks.
- The IOCLK clock is the Host clock divided by 4 in 33 MHz mode and divided by 2 in 66 MHz mode at Host = 133 MHz. IOCLK clock is the Host clock divided by 3 in 33 MHz and divided by 2/3 in 66 MHz mode at Host = 100 MHz.
- Frequency accuracy of 48 MHz must be +167 ppm to match USB default.
- t_{HKH} is measured at 2.4 V for 3.3 V outputs, as shown in Figure 7.
- t_{HKL} is measured at 0.4 V for all outputs as shown in Figure 7.
- the time is specified from when V_{DDQ} achieves its normal operating level (typical condition $V_{DDQ} = 3.3$ V) until the frequency output is stable and operating within specification.
- t_{RISE} and t_{FALL} are measured as a transition through the threshold region $V_{OL} = 0.4$ V and $V_{OH} = 2.4$ V (1 mA) JEDEC specification.
- The average period over any 1 μs period of time must be greater than the minimum specified period.
- Calculated at minimum edge rate (1 V/ns) to guarantee 45–55% duty cycle. Pulse width is required to be wider at faster edge rate to ensure duty specification is met.
- Test load is $R_S = 33.2 \Omega$, $R_P = 49.9 \Omega$.
- Must be guaranteed in a realistic system environment.
- Configured for $V_{OH} = 0.71$ V in a 50 Ω environment.
- Measured at crossing points.
- Measured at 20% to 80%.
- Determined as a fraction of $2 \cdot (t_{RP} - t_{RN}) / (t_{RP} + t_{RN})$, where t_{RP} is a rising edge, and t_{RN} is an intersecting falling edge.
- Frequency generated by crystal oscillator
- Voltage measure point ($V_M = 1.5$ V). $V_{DD} = 3.3$ V.
- All offsets are to be measured at rising edges.
- Parameters are guaranteed by design.

CK00 (100/133 MHz) spread spectrum differential system clock generator

PCK2022R

AC WAVEFORMS

$V_M = 1.25\text{ V @ }V_{DDL}$ and $1.5\text{ V @ }V_{DD3}$

$V_X = V_{OL} + 0.3\text{ V}$

$V_Y = V_{OH} - 0.3\text{ V}$

V_{OL} and V_{OH} are the typical output voltage drop that occur with the output load.

Data sheet status

Data sheet status	Product status	Definition [1]
Objective specification	Development	This data sheet contains the design target or goal specifications for product development. Specification may change in any manner without notice.
Preliminary specification	Qualification	This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.
Product specification	Production	This data sheet contains final specifications. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.

[1] Please consult the most recently issued datasheet before initiating or completing a design.

Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Disclaimers

Life support — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
