## 2 x 22 W stereo BTL differential amplifier with speaker protection and

## TDA1556Q

### FEATURES

- Few peripheral components
- High output power
- Low output offset voltage
- Fixed gain
- Loudspeaker protection (with diagnostic facility)
- Differential inputs
- Dynamic Distortion Detector (DDD)
- High common mode input signal
- Very high CMRR
- Good ripple rejection
- Mute/stand-by switch
- Load dump protection
- Short-circuit safe
- Thermally protected
- Reverse polarity safe
- High energy handling capability at the outputs ( $V_P = 0$  V)
- Electrostatic discharge protection
- No switch-on/switch-off plop
- Flexible leads
- Low thermal resistance

### GENERAL DESCRIPTION

TDA1556Q is a monolithic integrated class-B output amplifier containing two 22 Watt amplifiers in a BTL configuration. The device is contained in a 17-lead single-in-line (SIL) plastic power package. It has two differential inputs and is primarily intended for car booster applications.

### QUICK REFERENCE DATA

SYMBOL	PARAMETER	CONDITION	MIN.	TYP.	MAX.	UNIT
$V_P$	positive supply voltage	operating	6.0	14.4	18	V
		non-operating	–	–	30	V
		load dump	–	–	45	V
$I_{ORM}$	repetitive peak output current		–	–	4	A
$I_P$	total quiescent current		–	80	–	mA
$I_{sb}$	stand-by current		–	0.1	100	$\mu$ A
$I_{sw}$	switch-on current		–	–	60	$\mu$ A
$ Z_i $	input impedance		50	–	–	k $\Omega$
$T_{vj}$	virtual junction temperature		–	–	150	$^{\circ}$ C
$P_O$	output power	4 $\Omega$ ; THD = 10%	–	22	–	W
SVRR	supply voltage ripple rejection	$R_S = 0$ $\Omega$ ; f = 100 Hz to 10 kHz	48	–	–	dB
$V_{os}$	DC output offset voltage		–	–	100	mV
$\alpha$	channel separation		40	–	–	dB
$\Delta G_v$	channel unbalance		–	–	1	dB
CMRR	rejection ratio		–	72	–	dB

### PINNING

SYMBOL	PIN	DESCRIPTION
IN1A	1	input signal 1A
IN1B	2	input signal 1B
n.c.	3	not connected
DDD	4	dynamic distortion detector
V <sub>p1</sub>	5	positive supply voltage 1
OUT1A	6	output signal 1A
GND1	7	power ground 1
OUT1B	8	output signal 1B
n.c.	9	not connected
OUT2A	10	output signal 2A
GND2	11	power ground 2
OUT2B	12	output signal 2B
V <sub>p2</sub>	13	positive supply voltage 2
M/SB	14	mute/stand-by switch
LSP	15	loudspeaker protection
IN2A	16	input signal 2B
IN2B	17	input signal 2A

### THERMAL RESISTANCE

SYMBOL	PARAMETER	THERMAL RESISTANCE
R <sub>th j-a</sub>	from junction to ambient in free air	40 K/W
R <sub>th j-c</sub>	from junction to case (see Figs 3 and 4)	1.5 K/W

## 2 x 22 W stereo BTL differential amplifier with speaker protection and dynamic

TDA1556Q

### FUNCTIONAL DESCRIPTION

The TDA1556Q contains two identical amplifiers each with a fixed gain of 26 dB and differential input stages. The device can be used for bridge-tied-load applications. The circuit has the following features:

- low stand-by current ( $< 100 \mu\text{A}$ )
- low mute/stand-by switching current (low cost supply switch)
- mute facility

### Loudspeaker protection

Should a short circuit to ground occur, thereby forcing a DC voltage  $\geq 1 \text{ V}$  across the loudspeaker, a built-in protection circuit is activated to limit the DC voltage across the speaker to  $\leq 1 \text{ V}$ . The delay time of the protection circuit can be influenced by the external capacitor connected to pin 15.

A dynamic distortion detector (DDD) is activated when clipping occurs at one or both output stages. Its information may be used to operate a sound processor or DC volume control to attenuate the input signal, thereby minimizing the distortion.

### LIMITING VALUES

In accordance with the absolute maximum system (IEC 134)

SYMBOL	PARAMETER	CONDITION	MIN.	MAX.	UNIT
$V_P$	positive supply voltage	operating	–	18	V
		non-operating	–	30	V
		during 50 ms (load dump protection); rise time $\geq 2.5 \text{ ms}$	–	45	V
$I_{OSM}$	non-repetitive peak output current		–	6	A
$I_{ORM}$	repetitive peak output current		–	4	A
$T_{stg}$	storage temperature range		–55	+150	$^{\circ}\text{C}$
$T_{vj}$	virtual junction temperature		–	+150	$^{\circ}\text{C}$
$V_{psc}$	AC and DC short-circuit safe voltage		–	18	V
	energy handling capability at outputs	$V_P = 0$	–	200	mJ
$V_{pr}$	reverse polarity		–	6	V
$P_{tot}$	total power dissipation		–	60	W

### DC CHARACTERISTICS

$V_P = 14.4 \text{ V}$ ;  $T_{amb} = 25 \text{ }^{\circ}\text{C}$ ; unless otherwise specified

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
<b>Supply</b>						
$V_P$	positive supply voltage	note 1	6.0	14.4	18	V
$I_P$	quiescent current		–	80	160	mA
$V_O$	DC output voltage	note 2	–	6.9	–	V
$V_{os}$	DC output offset voltage	operating	–	–	100	mV
<b>Mute/stand-by</b>						
$V_{ON}$	switch-on voltage level		8.5	–	–	V

TDA1556Q

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
<b>MUTE CONDITION</b>						
$V_{\text{mute}}$	mute voltage		3.3	–	6.4	V
$V_{\text{O}}$	output signal in mute position	$V_{\text{I max}} = 1 \text{ V}; f = 1 \text{ kHz}$	–	–	2	mV
$V_{\text{os}}$	DC output offset voltage		–	–	100	mV
<b>STANDBY CONDITION</b>						
$V_{\text{sb}}$	stand-by voltage		0	–	2	V
$I_{\text{sb}}$	DC standby current	$V_{14} < 0.5 \text{ V}$	–	–	100	$\mu\text{A}$
		$0.5 \text{ V} \leq V_{14} \leq 2.0 \text{ V}$	–	–	500	$\mu\text{A}$
$I_{\text{sw}}$	switch-on current		–	25	60	$\mu\text{A}$
$I_{\text{psc}}$	supply current	short-circuit to ground; note 3	–	10	–	mA
<b>Loudspeaker protection</b>						
$ \Delta V_{6-8, 10-12} $	DC voltage across $R_{\text{L}}$		–	–	1.0	V
$t_{\text{d}}$	delay time		–	0.5	–	s
<b>Protection active (<math> \Delta V_{4-6} </math> or <math> \Delta V_{7-9}  \leq 1.0 \text{ V}</math>)</b>						
$I_{15}$	current information		–	25	–	$\mu\text{A}$
$V_{15}$	voltage information		3.6	–	–	V
<b>Protection inactive (<math> \Delta V_{6-8} </math> and <math> \Delta V_{10-12}  \leq 0.1 \text{ V}</math>)</b>						
$V_{15}$	voltage information		–	–	0.3	V

### Notes to the characteristics

- The circuit is DC adjusted at  $V_{\text{P}} = 6$  to 18 V and AC operating at  $V_{\text{P}} = 8.5$  to 18 V
- At  $18 \text{ V} < V_{\text{P}} < 30 \text{ V}$  the DC output voltage  $\leq V_{\text{P}}/2$
- Conditions:  $V_{14} = 0 \text{ V}$ ; short circuit to ground; switch  $V_{14}$  to MUTE or ON condition, rise time at  $V_{14} = \geq 10 \mu\text{s}$
- Frequency response externally fixed
- Ripple rejection measured at the output with a source-impedance of  $0 \Omega$  (maximum ripple amplitude of 2 V) and a frequency between 100 Hz and 10 kHz
- Mismatching is given by the following equation:

$$|\Delta Z_{\text{i}}| = \frac{Z_{\text{i1}} - Z_{\text{i2}}}{Z_{\text{i1}}} \times 100\%$$

$$|\Delta Z_{\text{i}}| = \frac{Z_{\text{i3}} - Z_{\text{i4}}}{Z_{\text{i3}}} \times 100\%$$

- Noise measured in a bandwidth of 20 Hz to 20 kHz
- Noise output voltage independent of  $R_{\text{S}}$  ( $V_{\text{I}} = 0 \text{ V}$ )
- Common mode rejection ratio measured at the output with both inputs tied together.  $V_{\text{I(RMS)}} < 3.5 \text{ V}$ ;  
 $f = 100 \text{ Hz} - 10 \text{ kHz}$

### SOLDERING

#### Introduction

There is no soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and surface mounted components are mixed on one printed-circuit board. However, wave soldering is not always suitable for surface mounted ICs, or for printed-circuits with high population densities. In these situations reflow soldering is often used.

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "IC Package Databook" (order code 9398 652 90011).

#### Soldering by dipping or by wave

The maximum permissible temperature of the solder is 260 °C; solder at this temperature must not be in contact with the joint for more than 5 seconds. The total contact time of successive solder waves must not exceed 5 seconds.

The device may be mounted up to the seating plane, but the temperature of the plastic body must not exceed the specified maximum storage temperature ( $T_{stg\ max}$ ). If the printed-circuit board has been pre-heated, forced cooling may be necessary immediately after soldering to keep the temperature within the permissible limit.

#### Repairing soldered joints

Apply a low voltage soldering iron (less than 24 V) to the lead(s) of the package, below the seating plane or not more than 2 mm above it. If the temperature of the soldering iron bit is less than 300 °C it may remain in contact for up to 10 seconds. If the bit temperature is between 300 and 400 °C, contact may be up to 5 seconds.

### DEFINITIONS

Data sheet status	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
Limiting values	
Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
Application information	
Where application information is given, it is advisory and does not form part of the specification.	

### LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.
