Switch for CTV receivers

TDA8440

**GENERAL DESCRIPTION**

The TDA8440 is a versatile video/audio switch, intended to be used in CTV receivers equipped with an AUXILIARY VIDEO/AUDIO plug.

It provides two 3-state switches for audio channels and one 3-state switch for the video channel and a video amplifier with selectable gain (times 1 or times 2).

The integrated circuit can be used in conjunction with a microcontroller from the MAB8400 family, and is controlled via a bidirectional I²C bus. Sufficient sub-addressing is provided for the I²C bus mode. It can also be controlled directly by d.c. switching signals.

Features

- Combined analogue and digital circuitry gives maximum flexibility in channel switching
- 3-state switches for all channels
- Selectable gain for the video channels
- Sub-addressing facility
- I²C bus or non-I²C bus mode (controlled by d.c. voltages)
- Slave receiver in the I²C bus mode
- External OFF command
- System expansion possible up to 7 devices (14 sources)
- Static short-circuit proof outputs

QUICK REFERENCE DATA

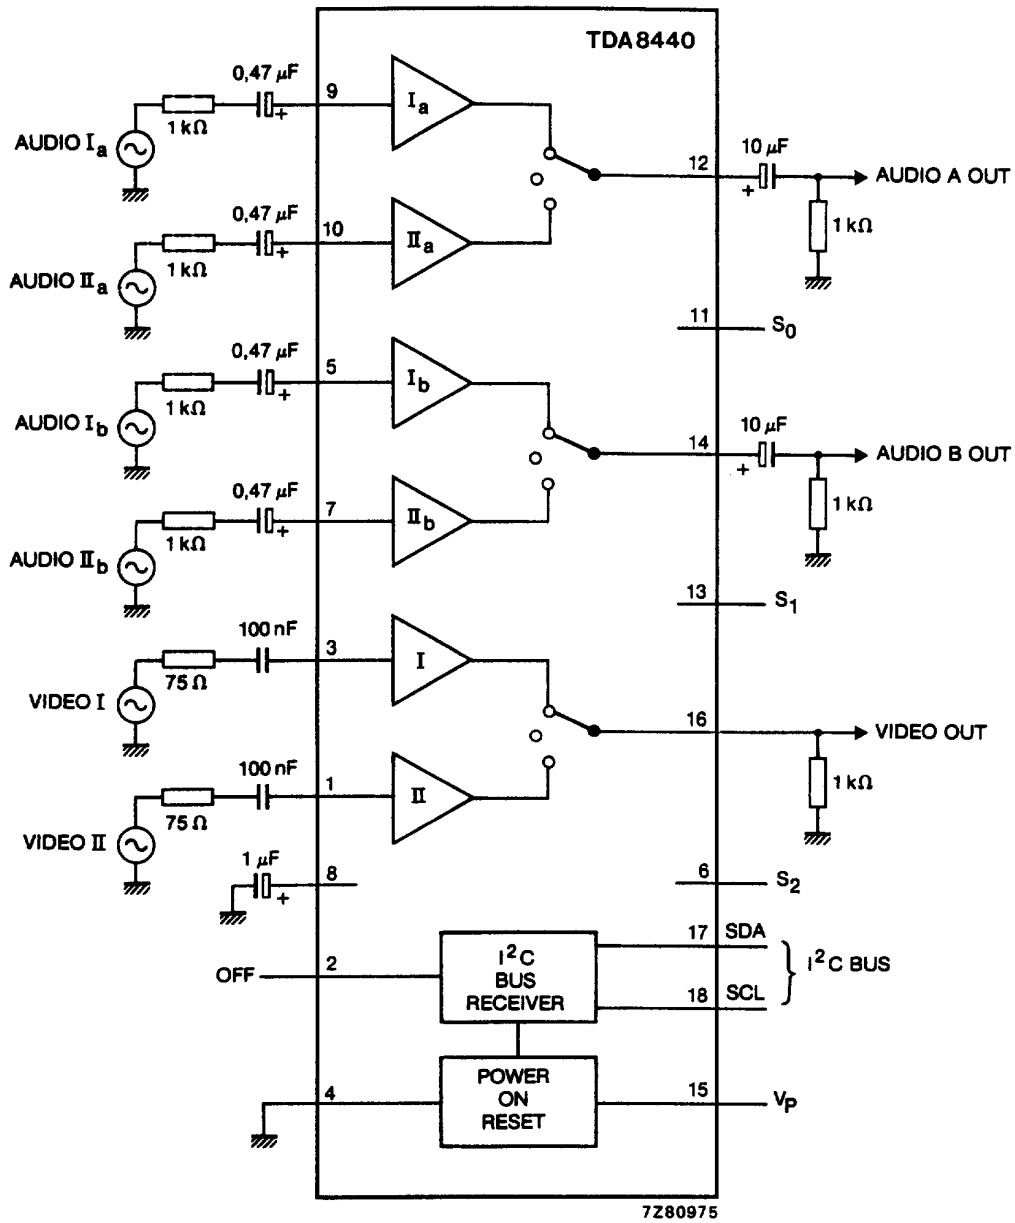

Supply voltage range	V_{15-4}	10 to 13,2 V
Supply current (without load)	I_{15}	typ. 33 mA
		max. 50 mA
Storage temperature	T_{stg}	max. + 125 °C
Operating ambient temperature range	T_{amb}	0 to + 70 °C

PACKAGE OUTLINE

Switch for CTV receivers

TDA8440

S0, S1, S2 and OFF (pins 11, 13, 6 and 2) connected to V_P or GND.
If more than 1 device is used, then the outputs and the pins 8 (bias decoupling of the audio inputs) may be connected in parallel.

Fig.1 Block diagram and test circuit.

Switch for CTV receivers

TDA8440

FUNCTIONAL DESCRIPTION

The TDA8440 is a monolithic system of switches and can be used in CTV receivers equipped with an AUXILIARY VIDEO/AUDIO plug.

The IC incorporates 3-state switches; they comprise:

- a) An electronic video switch with selectable gain (times 1 or times 2) for switching between an internal video signal (from the IF amplifier) and an AUXILIARY input signal.
- b) Two electronic audio switches, for two sound channels (stereo or dual language), for switching between internal audio sources and signals from the AUXILIARY VIDEO/AUDIO plug.

A selection can be made between two input signals and an OFF-state. The OFF-state is necessary if more than one TDA8440 device is used.

The SDA and SCL pins can be connected to the I²C bus or to d.c. switching voltages. Inputs S₀ (pin 11), S₁ (pin 13), and S₂ (pin 6) are used for selection of sub-addresses or switching to the non-I²C mode. Inputs S₀, S₁ and S₂ can be connected to the supply voltage (H) or to ground (L). In this way no peripheral components are required for selection.

Table 1 Sub-addressing

S ₂	S ₁	S ₀	SUB-ADDRESS		
			A ₂	A ₁	A ₀
L	L	L	0	0	0
L	L	H	0	0	1
L	H	L	0	1	0
L	H	H	0	1	1
H	L	L	1	0	0
H	L	H	1	0	1
H	H	L	1	1	0
H	H	H	non I ² C addressable		

NON-I²C BUS CONTROL

If the TDA8440 switching device has to be operated via the AUXILIARY VIDEO/AUDIO plug, inputs S₂, S₁ and S₀ must be connected to the supply line (12 V).

The sources (internal and external) and the gain of the video amplifier can be selected via the SDA and SCL pins with the switching voltage from the AUXILIARY VIDEO/AUDIO plug:

- Sources I are selected if SDA = 12 V (external source)
- Sources II are selected if SDA = 0 V (TV mode)
- Video amplifier gain is 2 × if SCL = 12 V (external source)
- Video amplifier gain is 1 × if SCL = 0 V (TV mode)

If more than one TDA8440 device is used in the non-I²C bus system, the OFF pin can be used to switch off the desired devices. This can be done via the 12 V switching voltage on the AUXILIARY VIDEO/AUDIO plug.

- All switches are in the OFF position if OFF = H (12 V)
- All switches are in the selected position via SDA and SCL pins if OFF = L (0 V)

Switch for CTV receivers

TDA8440

I²C BUS CONTROL

Detailed information on the I²C bus is available on request.

Table 2 TDA8440 I²C bus protocol.

STA	A ₆	A ₅	A ₄	A ₃	A ₂	A ₁	A ₀	R/W	AC	D ₇	D ₆	D ₅	D ₄	D ₃	D ₂	D ₁	D ₀	AC	STO
-----	----------------	----------------	----------------	----------------	----------------	----------------	----------------	-----	----	----------------	----------------	----------------	----------------	----------------	----------------	----------------	----------------	----	-----

- STA = start condition
- A₆ = 1 Fixed address bits
- A₅ = 0 Fixed address bits
- A₄ = 0 Fixed address bits
- A₃ = 1 Fixed address bits
- A₂ = sub-address bit, fixed via S₂ input
- A₁ = sub-address bit, fixed via S₁ input
- A₀ = sub-address bit, fixed via S₀ input
- R/W = read/write bit (has to be 0, only write mode allowed)
- AC = acknowledge bit (= 0) generated by the TDA8440
- D₇ = 1 audio Ia is selected to audio output a
- D₇ = 0 audio Ia is not selected
- D₆ = 1 audio IIa is selected to audio output a
- D₆ = 0 audio IIa is not selected
- D₅ = 1 audio Ib is selected to audio output b
- D₅ = 0 audio Ib output is not selected
- D₄ = 1 audio IIb is selected to audio output b
- D₄ = 0 audio IIb is not selected
- D₃ = 1 video I is selected to video output
- D₃ = 0 video I is not selected
- D₂ = 1 video II is selected to video output
- D₂ = 0 video II is not selected
- D₁ = 1 video amplifier gain is times 2
- D₁ = 0 video amplifier gain is times 1
- D₀ = 1 OFF-input inactive
- D₀ = 0 OFF-input active
- STO = stop condition

OFF FUNCTION

With the OFF input all outputs can be switched off (mode high ohmic), depending on the value of D₀.

Switch for CTV receivers

TDA8440

D₀/OFF gating

D ₀	OFF INPUT	OUTPUTS
0 (off input active)	H	OFF
0	L	in accordance with last defined D ₇ - D ₁ (may be entered while OFF = HIGH)
1 (off input inactive)	H	in accordance with D ₇ - D ₁
1	L	in accordance with D ₇ - D ₁

Power-on reset

The circuit is provided with a power-on reset function.

When the power supply is switched on an internal pulse will be generated that will reset the internal memory S₀, in the initial state all the switches will be in the off position and the OFF input is active (D₇ - D₀ = 0) (I²C mode), position defined via SDA and SCL inputs (non-I²C mode).

When the power supply decreases below 5 V a pulse will be generated and the internal memory will be reset. The behaviour of the switches will be the same as described above.

RATINGS

Notes to the characteristics

- Also if the supply is switched off.
- Caused by drive on any other input at maximum level, measured in $B = 5 \text{ MHz}$, source impedance for the used input 75Ω ,

$$\text{crosstalk} = 20 \log \frac{V_{out}}{V_{IN \max}}$$
- $S/N = 20 \log \frac{V_O \text{ video noise (p-p) (2 V)}}{V_O \text{ noise rms } B = 5 \text{ MHz}}$
- Supply voltage ripple rejection = $20 \log \frac{V_r \text{ supply}}{V_r \text{ on output}}$ at $f = \text{max. } 100 \text{ kHz}$.
- $S/N = 20 \log \frac{V_O \text{ nominal (0,5 V)}}{V_O \text{ noise } B = 20 \text{ kHz}}$
- Caused by drive of any other input at maximum level, measured in $B = 20 \text{ kHz}$, source impedance of the used input = $1 \text{ k}\Omega$,

$$\text{crosstalk} = 20 \log \frac{V_{out}}{V_{in \max}}$$
 according to DIN 45405 (CCIR 468).
- $f = 20 \text{ Hz to } 20 \text{ kHz}$.
- All outputs are short-circuit proof (static).
- The inputs and output (apart from SDA, SCL and OFF) withstand tests of MIL-STD-883 C. It is advisable to connected series resistors to these pins.
- Timings $t_{S, DAT}$ and $t_{H, DAT}$ deviate from the I²C bus specification. After reset has been activated, transmission may only be started after a $50 \mu\text{s}$ delay.
- I²C bus load conditions are as follows:
 $4\text{k}\Omega$ pull-up resistor to $+5 \text{ V}$; 200 pF to GND.
 All values are referred to $V_{IH} = 3 \text{ V}$ and $V_{IL} = 1,5 \text{ V}$.

SOLDERING

Introduction

There is no soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and surface mounted components are mixed on one printed-circuit board. However, wave soldering is not always suitable for surface mounted ICs, or for printed-circuits with high population densities. In these situations reflow soldering is often used.

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "IC Package Databook" (order code 9398 652 90011).

Soldering by dipping or by wave

The maximum permissible temperature of the solder is 260 °C; solder at this temperature must not be in contact

with the joint for more than 5 seconds. The total contact time of successive solder waves must not exceed 5 seconds.

The device may be mounted up to the seating plane, but the temperature of the plastic body must not exceed the specified maximum storage temperature ($T_{stg\ max}$). If the printed-circuit board has been pre-heated, forced cooling may be necessary immediately after soldering to keep the temperature within the permissible limit.

Repairing soldered joints

Apply a low voltage soldering iron (less than 24 V) to the lead(s) of the package, below the seating plane or not more than 2 mm above it. If the temperature of the soldering iron bit is less than 300 °C it may remain in contact for up to 10 seconds. If the bit temperature is between 300 and 400 °C, contact may be up to 5 seconds.

DEFINITIONS

Data sheet status	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
Limiting values	
Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
Application information	
Where application information is given, it is advisory and does not form part of the specification.	

LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.

PURCHASE OF PHILIPS I²C COMPONENTS

Purchase of Philips I²C components conveys a license under the Philips' I²C patent to use the components in the I²C system provided the system conforms to the I²C specification defined by Philips. This specification can be ordered using the code 9398 393 40011.
