**DIODE ARRAY**
**FEATURES**

- ARRAY OF EIGHT DIODES
- IDEAL FOR CLAMPING SIGNALS TO SUPPLY RAILS
- SUITABLE FOR ISDN PROTECTION APPLICATIONS

**DESCRIPTION**

Array of diodes configured to clamp four signals to a fixed reference so as to prevent damage caused by overvoltages. The reference can be either the supply rails or a Transil<sup>TM</sup> clamping device.

The diode array can be used for protecting the low-voltage side of an ISDN S interface. Other applications include microcontroller input port protection and signal conditioning.
