

HIGH PERFORMANCE  
 DUAL BIPOLAR OPERATIONAL AMPLIFIER

- HIGH GAIN BANDWIDTH PRODUCT : **25MHz**
- HIGH SLEW RATE : **15V/ $\mu$ s**
- SINGLE OR DUAL SUPPLY OPERATION : **3V TO 30V** ( $\pm 1.5V$  to  $\pm 15V$ )
- LOW VOLTAGE NOISE : **14nV/ $\sqrt{Hz}$**
- NO PHASE INVERSION
- ESD TOLERANCE : 2kV
- LATCH-UP IMMUNITY
- SPICE MACROMODEL INCLUDED IN THIS SPECIFICATION

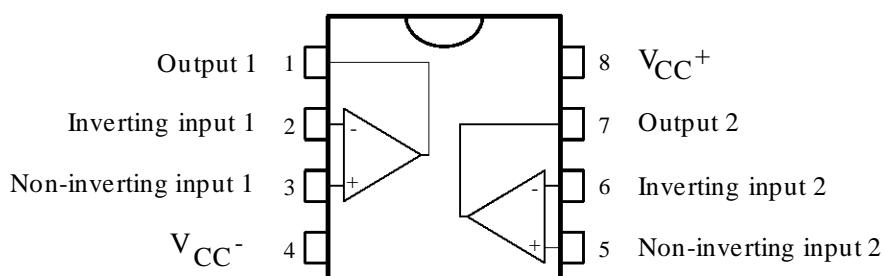

**DESCRIPTION**

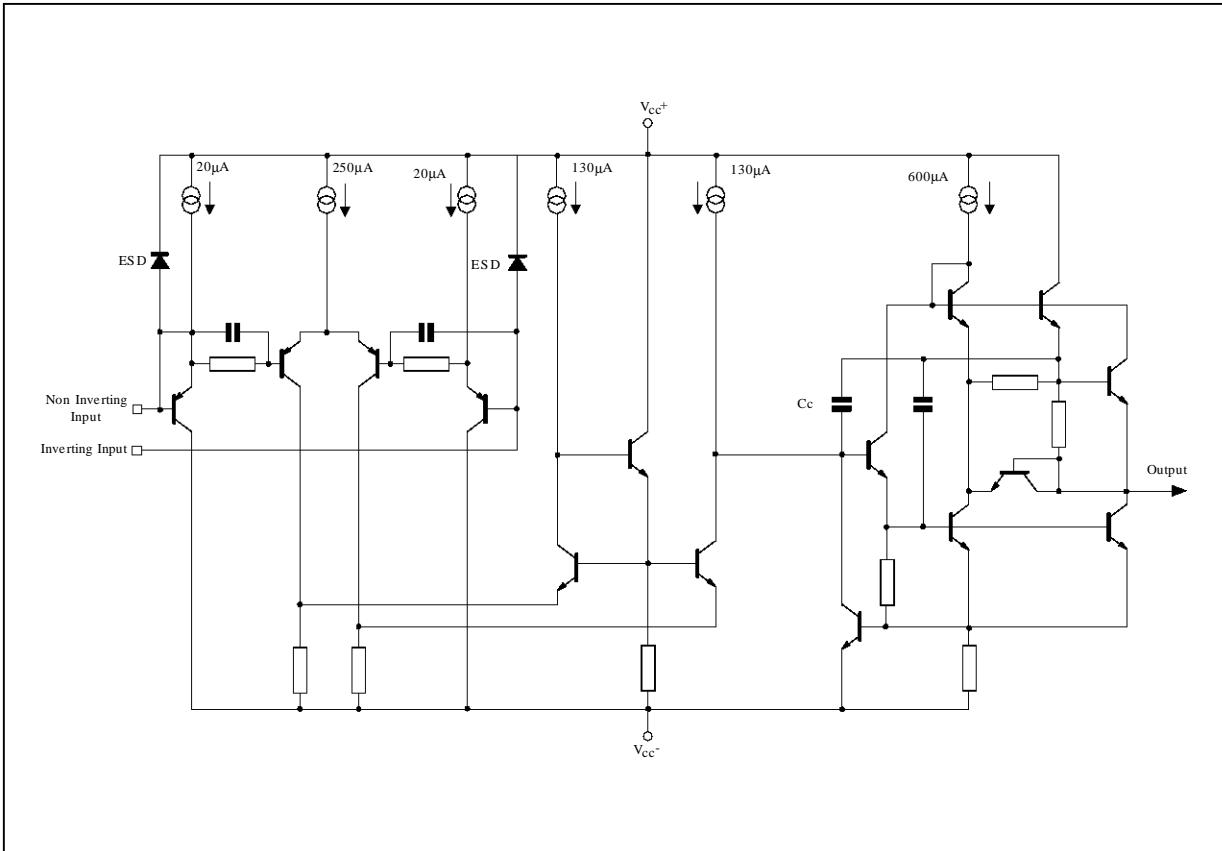

The TSH22 is a dual bipolar operational amplifier offering a single supply operation from 3V to 30V with very good performances : medium speed (25MHz), unity gain stability and low noise.

The TSH22 is therefore an enhanced replacement of standard dual operational amplifiers.

**ORDER CODES**

Part Number	Temperature Range		Package	
	N	D	•	•
TSH22I	-40, +125°C			

**PIN CONNECTIONS** (top view)

**SCHEMATIC DIAGRAM (1/2 TSH22)**

**ABSOLUTE MAXIMUM RATINGS**

Symbol	Parameter	Value	Unit
$V_{CC}$	Supply Voltage	$\pm 18$ or $+36$	V
$V_{id}$	Differential Input Voltage - (note 1)	$\pm 36$	V
$V_i$	Input Voltage - (note 1)	$\pm 18$	V
	Output Short-Circuit Duration - (note 2)	Infinite	
$T_{oper}$	Operating Free-air Temperature Range	-40 to +105	°C
$T_j$	Maximum Junction Temperature	+150	°C
$T_{stg}$	Storage Temperature	-65 to +150	°C
$P_{tot}$	Maximum Power Dissipation - (note 2)	500	mW

**Notes :**

1. Either or both input voltages must not exceed the magnitude of  $V_{CC}^+$  or  $V_{CC}^-$
2. Power dissipation must be considered to ensure maximum junction temperature ( $T_j$ ) is not exceeded

**OPERATING CONDITIONS**

Symbol	Parameter	Value	Unit
$V_{CC}$	Supply Voltage	3 to 30	V

**ELECTRICAL CHARACTERISTICS** $V_{CC}^+ = +15V, V_{CC}^- = -15V, T_{amb} = 25^\circ C$  (unless otherwise specified)

## APPLICATIONS INFORMATION

### TSH22 IN COMPARATOR APPLICATION

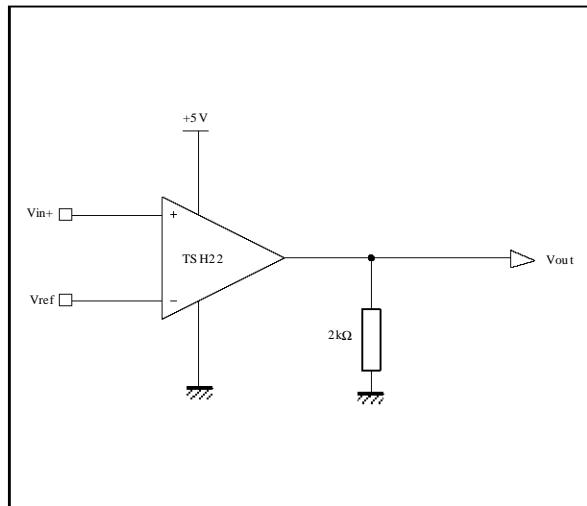

The TSH22 is a dual high performances operational amplifier featuring speed of 30MHz and single supply operation from 3V to 30V.

Most of operational amplifiers are not suited for comparator use because of low transition speed, output signal incompatible with standard logics level and mainly, phase inversion.

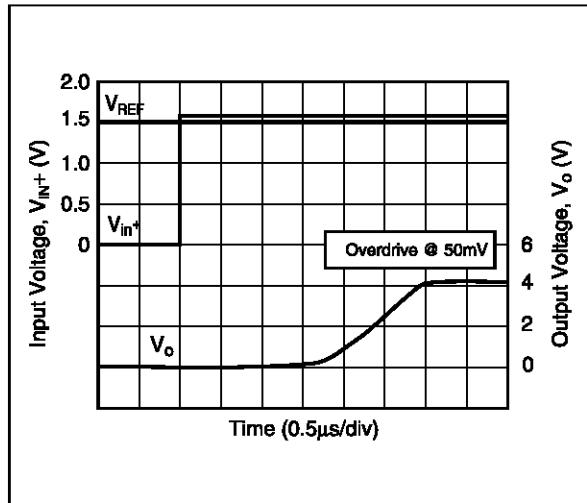

The phase inversion occurs when a strong differential signal is applied to the device inputs. The output level is then inverted and shows a wrong logic state.

TSH22 does not present this problematic behaviour.

**Figure 1 :** Basic Comparator Application

**Figure 3 :** Transition speed @ 50mV overdrive

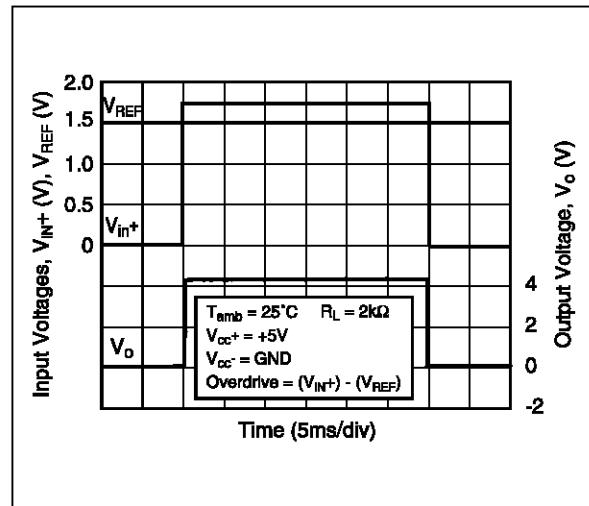

Displayed curves below show the device response in standard comparator configuration without external components.

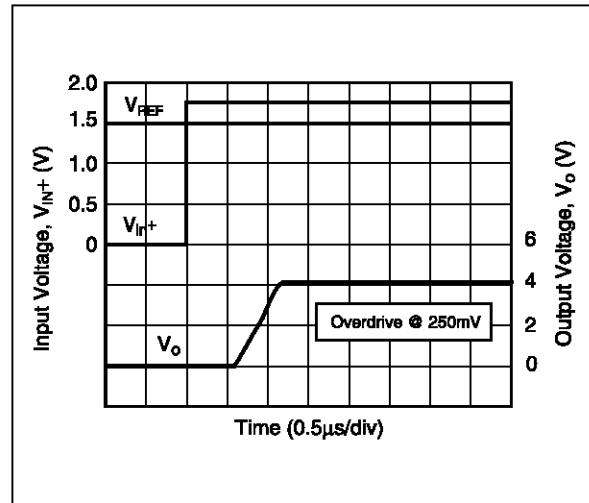

Transition speed : Typical transition speed under a single 5V supply voltage is about  $2\mu s$  from 50mV overdrive.  $V_{OH}$  min. is 3.7V and  $V_{OL}$  max. is 0.2V (2kΩ load) making it compatible with standard logic families.

Figures 3 & 4 show output signal transition for a 50mV and 250mV input signal overdrive respectively of  $3\mu s$  and  $1\mu s$ .

**Figure 2 :** Operating Conditions

**Figure 4 :** Transition speed @ 250mV overdrive

**PHASE INVERSION**

At high differential input voltage, the TSH22 keeps the right output level thanks to its specific input structures.

The advantage is obvious on the following figures and can be also an advantage in linear use when saturation might occur.

**Figure 5 :** Behaviour with TSH22

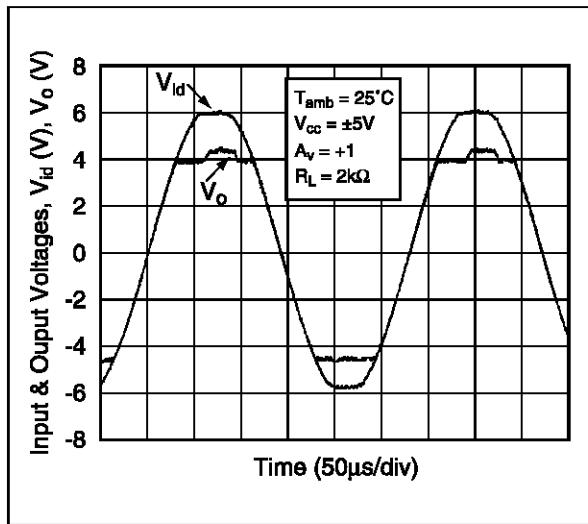

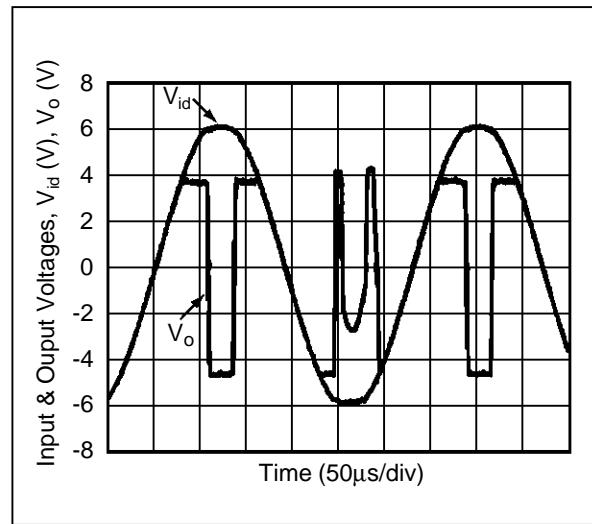

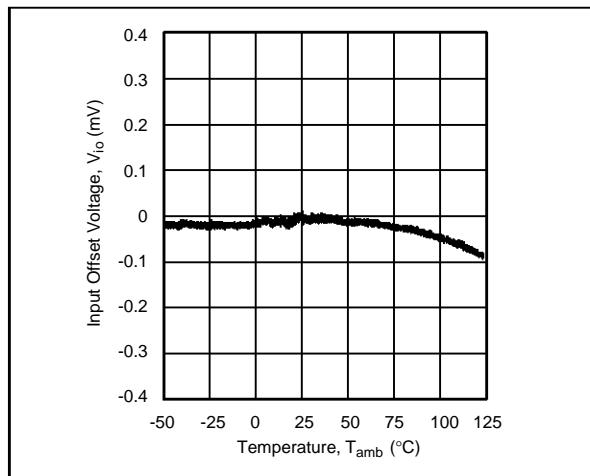

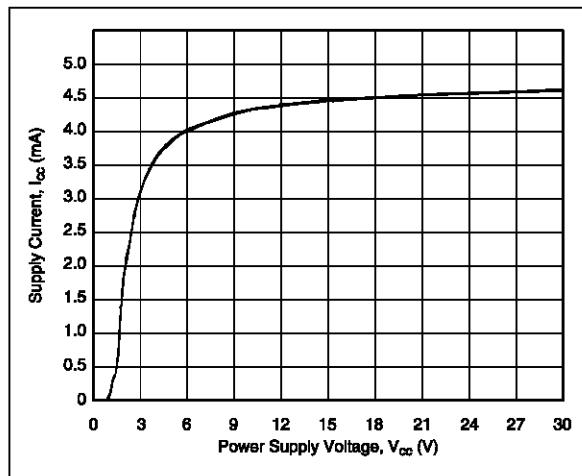

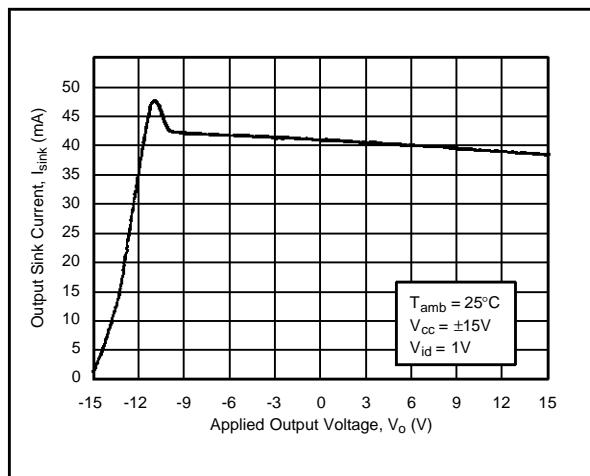

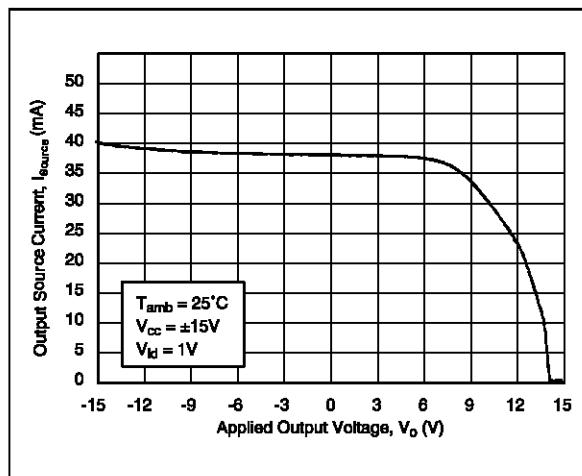

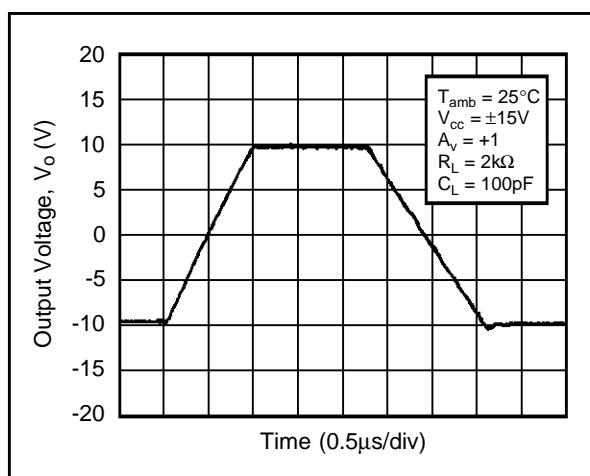

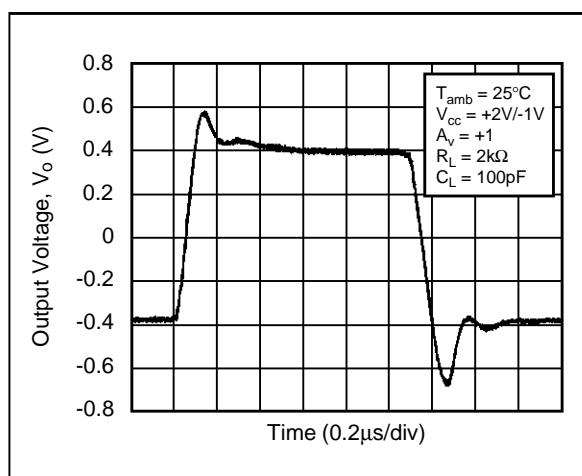

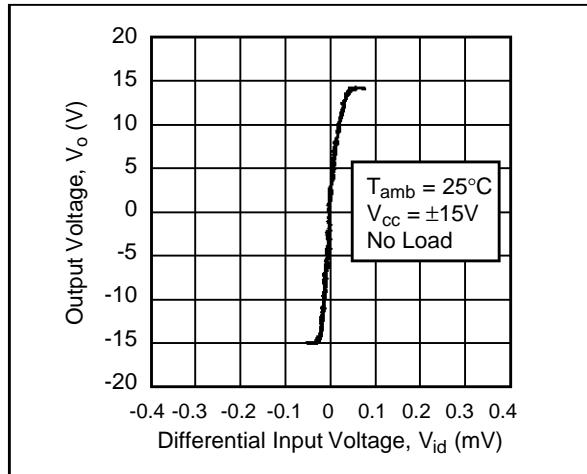

Figure 5 & 6 show the behaviour in follower stage with saturation output of TSH22 versus 15MHz standard operational amplifier.
