MODEL No : LQ10D36x

P E C   N o : L D - 8 5 1 6

## 1. Application

This **specification** applies to color **TFT-LCD module**, LQ1OD36X.

## 2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICS, control circuit and power supply circuit and a backlight unit. Graphics and texts can be displayed on a 640X3X 480 dots panel with 262,144 colors by supplying 18 bit data signal (**6bit/color**), four timing signals, +5V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

The TFT-LCD panel used for this module is a low-reflection and higher-color-saturation type. Therefore, this **module** is also suitable for the **multimedia** use.

This **module** is the type of wide viewing angle.

Optimum viewing direction is 6 o'clock.

**Backlight-driving DC/AC inverter is not built in this module.**

## 6-2. Backlight driving

The backlight system is an edge-lighting type with single CCFT (Cold Cathode Fluorescent Tube). The characteristics of single lamp are shown in the following table.

$$Ta=25^{\circ}\text{C}$$

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp current	I <sub>L</sub>	TBD	(6.0)	TBD	mArms	【Note1】
Lamp power consumption	P <sub>L</sub>	-	TBD	-	W	【Note2】
Lamp frequency	f <sub>L</sub>	20	35	60	KHz	[Note3]
Kick-off voltage	V <sub>S</sub>	-	-	TBD	Vrms	Ta=25°C
		-	-	TBD	Vrms	Ta=0°C [Note4]
Lamp life time	L <sub>L</sub>		(25,000)	-	hour	[Note5]

【Note1】 Lamp current is measured with current meter for high frequency as shown below.

\* 3pin is V<sub>LOW</sub>【Note2】 At the condition of Y<sub>L</sub> = TBD cd/m<sup>2</sup>

[Note31] **Lamp** frequency **may** produce interference with horizontal synchronous **frequency, and this** may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.

**【Note4】The open output voltage of the inverter shall** be maintained for more than **1sec**; otherwise the lamp may not be turned on.

**【Note5】Lamp lifetime is defined that it applied either ① or ② under this condition**

(Continuous turning on at **T<sub>a</sub>=25°C, IL= TBD mArms**)

@ Brightness becomes **50%** of the original value under standard condition.

**② Kick-off voltage at T<sub>a</sub>=0°C exceeds maximum value, TBD V<sub>rms</sub>.**

Note) The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (**miss-lighting,flicker**, etc.) never occur. when you confirm it, the **module** should be operated in the same condition as it is installed in your instrument.

## 7. Timing Characteristics of input signals

Note) In case of lower frequency, the deterioration of display quality, flicker etc., may be occurred.

### 7-2. Horizontal display position

The horizontal display position is determined by ENAB signal and the input data corresponding to the rising edge of ENAB signal is displayed at the left end of the active area.

Parameter	symbol	Min.	Typ.	Ma...	unit	Remark
Enable signal	Setup time	Tes	5	—	Tc-10	ns
	Pulse width	Tep	2	640	640	clock
Hsync-Enable signal phase difference	THe	44	—	164	clock	—

Note) When ENAB is fixed "Low", the display starts from the data of C 104(clock) as shown in Fig.2-①~③. Be careful that the module does@ work when ENAB is fixed "High".

### 7-3. Vertical display position

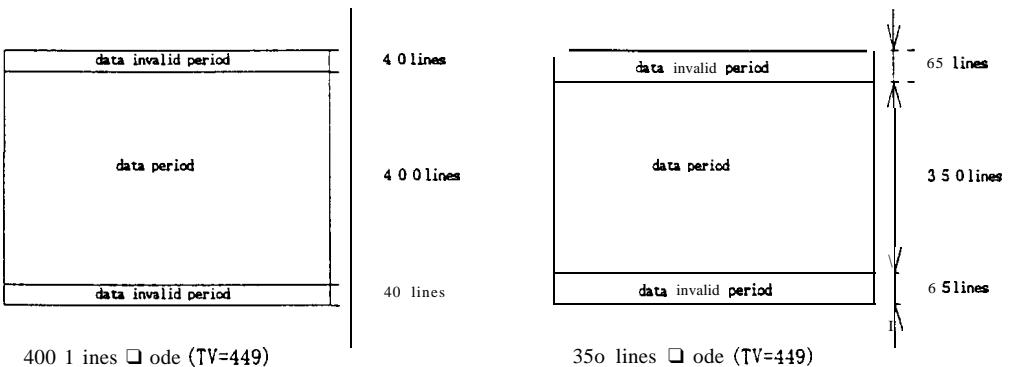

The vertical display position is automatically centered in the active area at each mode of VGA ,480 -,400 -,and 350-line mode Each mode is selected depending on the polarity of the synchronous signals described in 4-1(Note1).

In each mode ,the data of TVn is displayed at the top line of the active area. And the display position will be centered on the screen like the following figure when the period of vertical synchronous signal,TV, is typical value.

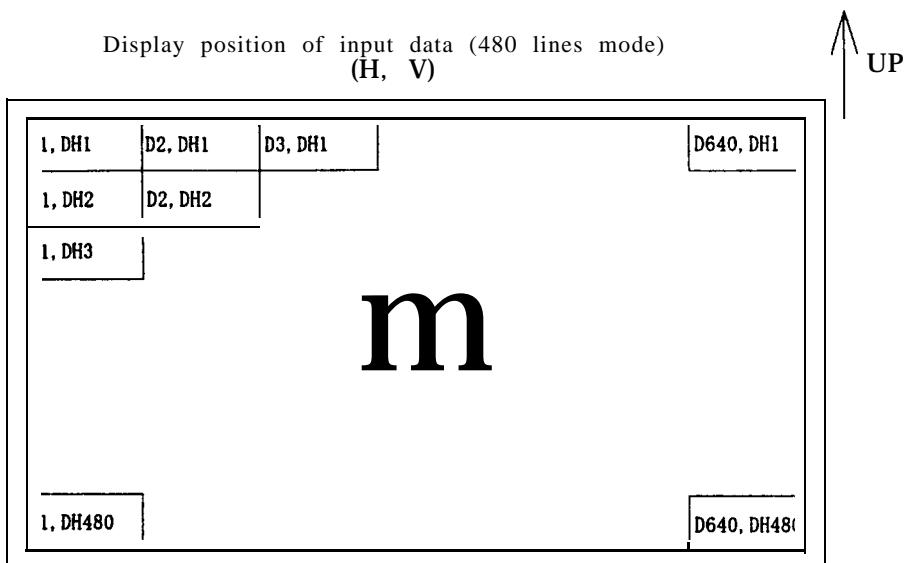

In 400-, and 350-line mode, the data in the vertical data invalid period is also displayed, So ,inputting all data "O" is recommended during vertical data invalid period.

ENAB signal has no relation to the vertical display position.

※The measurement shall be executed 30 minutes after lighting at rating. (typical condition:  $I_L = TBD \text{ mA rms}$ )  
 The optical characteristics shall be measured in a dark room or equivalent state  
 with the method shown in Fig.3 below.

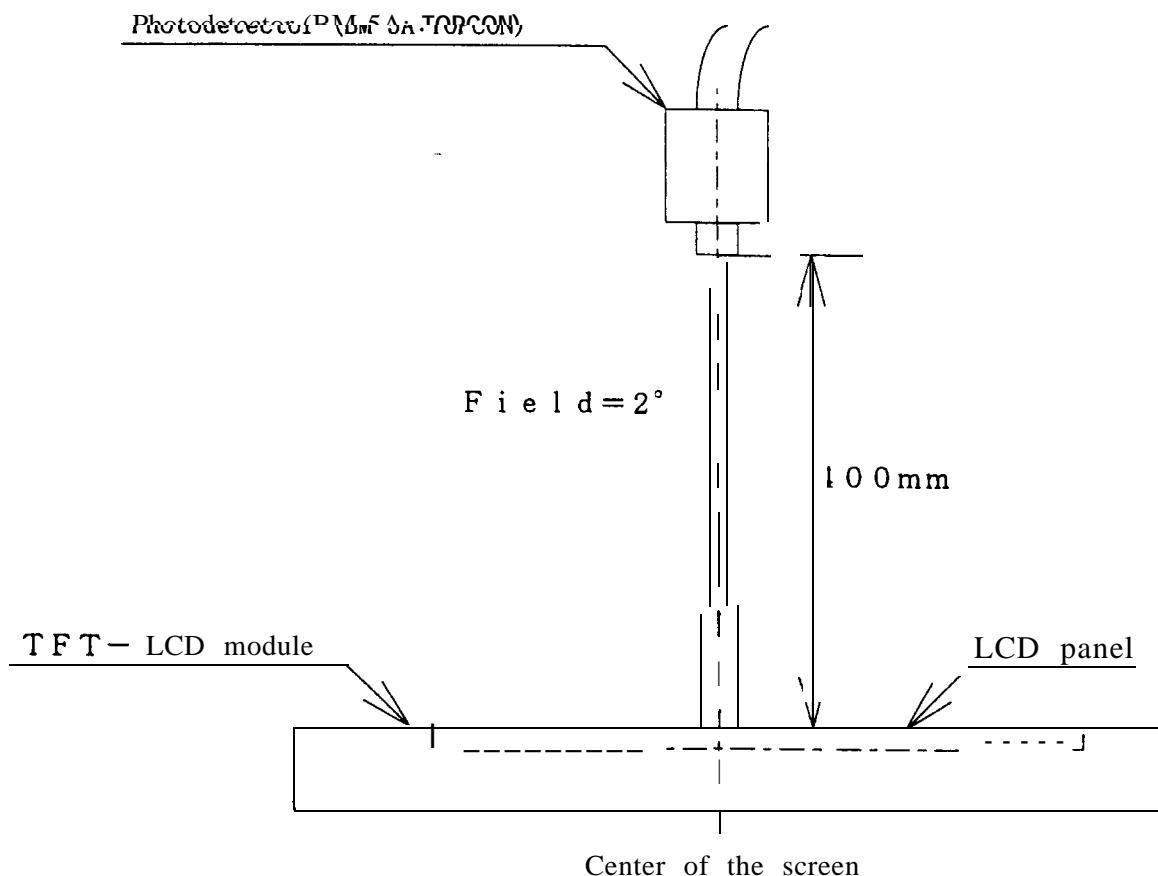

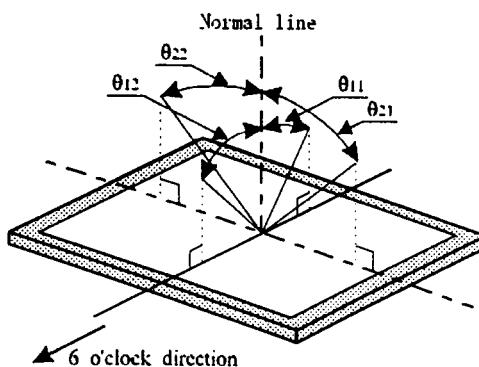

Fig. 3 Optical characteristics measurement method

**[Note1]** Definitions of viewing angle range:

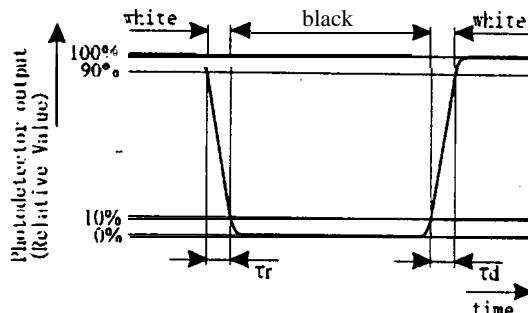

**[Note2]** Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

**[Note3]** Definition of response time:

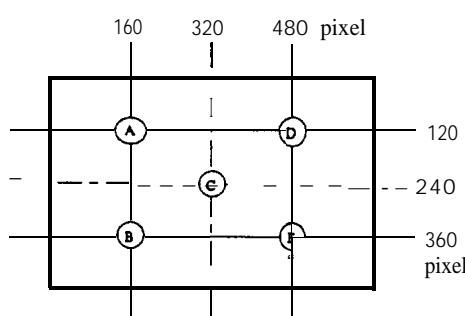

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

**[Note4]** This shall be measured at center of the screen.

**[Note5]** Definition of white uniformity:

White uniformity is defined as the following with five measurements (A~E).

$$\delta_w = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$

## 10. Display Quantity

The display quality of the color TFT-LCD module shall be in compliance with the **Incoming Inspection Standard**.

## 11. Handling Precautions

- a) Be **sure** to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as **warp** or **twist**.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other **soft** cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface.  
Handle with care.
- g) Since CMOS LSI is used in this **module**, take care of static electricity and injure the human earth when handling,
- h) Observe all other precautionary requirements in handling components.
- i) This **module** has its circuitry PCBS on the rear side and should be **carefully** handled in order not to be stressed.
- j) Laminated film is attached to the module surface to prevent it from being scratched. Peel the film off slowly, just before the use, with strict attention to electrostatic charges. Ionized air shall be blown over during the action. Blow off 'dust' on the polarizer by using an ionized nitrogen gun, etc.

## 12. Packing form

- a) Piling number of cartons : **MAX.7**
- b) Package quantity in one carton: **10pcs**
- c) Carton size : **298(W) × 295(H) × 362(D)mm**
- d) Total mass of 1 carton filled **with full modules** : 6800g

Packing form is shown in Fig.4

**3. Reliability test items**

## 1) Lot No. Label:

- 2) Adjusting volume have been set optimally before shipment, so do not change any adjusted value.  
If adjusted value is changed, the specification may not be satisfied.
- 3) Disassembling the module can cause permanent damage and should be strictly avoided.
- 4) Please be careful since image retention may occur when a fixed pattern is displayed for a long time
- 5) If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.
