

DATA SHEET

SKY85608-11: 5 GHz, 802.11ac Switch/Low-Noise Amplifier Front End

Applications

- Wi-Fi-enabled handsets, tablets, and mobile systems
- System-in-Package (SiP) modules for embedded systems
- 802.11n/ac smartphones and tablets

Features

- Integrates an SP2T switch and LNA with bypass mode
- Receive gain: 12 dB
- Noise figure: 2.0 dB
- Transmit path loss: 0.6 dB
- Small DFN (8-pin, 1.5 x 1.5 mm) package (MSL1, 260 °C per JEDEC-J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

The SKY85608-11 integrates a single-pole, double-throw (SPDT) switch and low-noise amplifier (LNA) with a bypass mode in an ultra-compact package. The device is capable of switching between WLAN receive and WLAN transmit.

The SKY85608-11 is provided in a small, 8-pin, 1.5 x 1.5 mm Dual Flat No-Lead (DFN) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

4	LEN	Control signal	8	TX	Transmit input

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY85608-11 are provided in Table 2. The recommended operating conditions are specified in Table 3, and electrical specifications are provided in Tables 4, 5, and 6.

The state of the SKY85608-11 is determined by the logic provided in Table 7.

Table 2. SKY85608-11 Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	V _{BAT} , V _{CC}	-0.3	+5.5	V
DC input on control pins	V _{IN}	-0.3	+3.6	V
LNA input power (RXOUT terminated in 50 Ω match)	P _{IN}		+5	dBm
Operating temperature	T _A	-40	+85	°C
Storage temperature	T _{STG}	-40	+140	°C

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: *Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.*

Evaluation Board Description

The SKY85608-11 Evaluation Board is used to test the performance of the SKY85608-11 LNA FEM. An Evaluation Board schematic diagram is provided in Figure 3. A photograph of the Evaluation Board is shown in Figure 4.

Evaluation Board Setup Procedure

1. Connect the system ground to pin 2 of connector J4.
2. Apply 3.3 V to VDD pin 6 or 12 of connector J4.
3. Refer to the Control Logic Table in Table 7 to set the device in the desired mode of operation. Set CRX, CTX, and LEN to appropriate VIL and VIH voltages, as specified in Table 3.
4. Transmit performance is monitored by applying an RF signal to the connector J1 (TX) and measuring the output power at the antenna port connector J2 (ANT).
5. Monitor performance in either high gain or bypass mode by applying an RF signal to the antenna port connector J2 (ANT) and measuring the output power at the receive port connector J3 (RX).

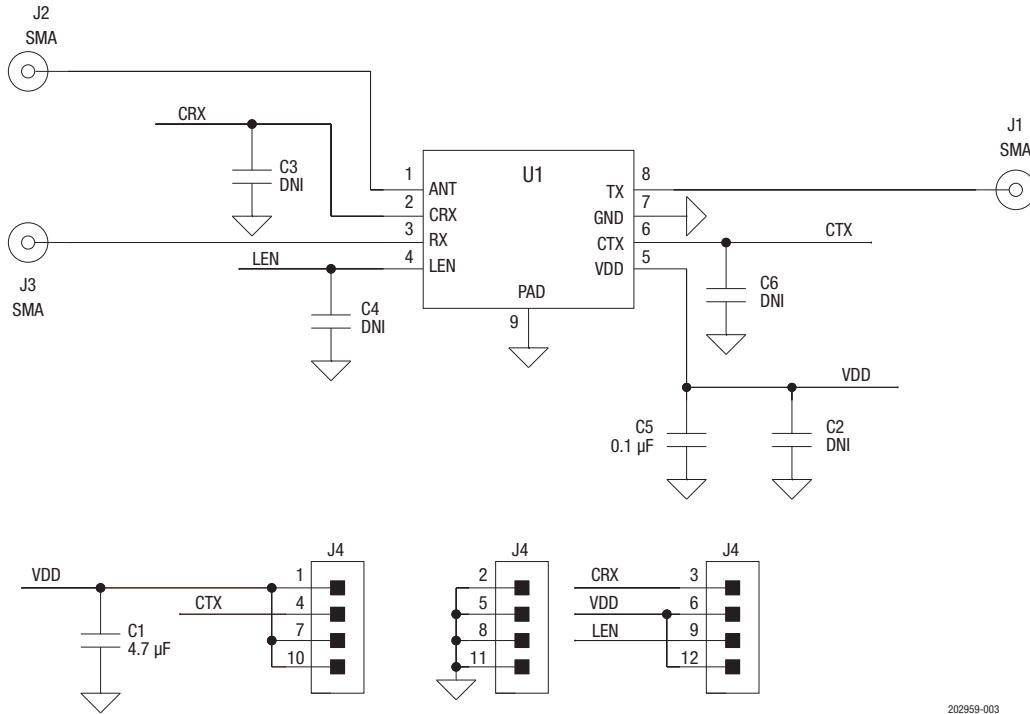

Evaluation Board Losses

The total track losses from the RF connectors of the Evaluation Board to the pins of the SKY85608 device are:

ANT: 0.25 dB

TX: 0.25 dB

RX: 0.25 dB

Package Dimensions

The PCB layout footprint for the SKY85608-11 is provided in Figure 5. A typical part marking drawing and sample photograph are shown in Figure 6. Package dimensions are shown in Figure 7, and tape and reel dimensions are provided in Figure 8.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY85608-11 is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Notes:

1. All dimensions are in millimeters
2. Dimensions and tolerances according to ASME Y14.5M-1994
3. Unless specified, dimensions are symmetrical about center lines.
4. Via hole recommendations: 0.025 mm Cu via wall plating (minimum), via holes to be filled with conductive paste and plated over.
5. Stencil recommendations: 0.10 mm stencil thickness, laser cut apertures, trapezoidal walls and rounded corners offer better paste release.
6. Solder mask recommendations: contact board fabricator for recommended solder mask offset and tolerance.

Figure 6. Typical Part Marking

Notes:

1. Dimensions and tolerances according to ASME Y14.5M-1994.
2. All measurements are in millimeters.
3. Unless otherwise specified, the following values apply:

Decimal Tolerance:	Angular Tolerance:
X.X (1 place) ± 0.1 mm	±1/2°
X.XX (2 places) ± 0.05 mm	
X.XXX (3 places) ± 0.025 mm	

4. Coplanarity applies to the terminals as well as all other bottom surface metallization.
5. Dimension applies to metallized terminal. If terminal tip has a radius, the dimension should not be measured in that radius area.
6. Unless specified, dimensions are symmetrical about center lines.
