Sony Electronics Inc. Semiconductor Business Division

Sony Electronics Inc. is a recognized leader in a number of major electronics markets including consumer, broadcast, commercial, components, media, energy and communications. In 35 years of North American operations, Sony has created numerous products that have helped make customers' lives easier, more enjoyable and more productive. To address its own needs for advanced technology, Sony began designing and manufacturing semiconductors. In the early 1980s, Sony expanded these operations by creating a component products division and began supplying integrated circuits to the OEM market, including U.S. based companies in 1983. By 1993, worldwide semiconductor sales exceeded \$2 billion, leading Sony to consolidate its resources into a single domestically-based organization in 1995.

Sony Electronics Inc.'s Semiconductor Business Division (SBD) combines the diverse strengths of Sony's semiconductor design, engineering, marketing and sales operations in a vertically integrated company. It enables Sony to respond quickly in the rapidly changing and competitive North American semiconductor marketplace and supports Sony's global efforts in developing innovative value-added products.

The division has approximately 200 employees in design, marketing and sales operations located in San Jose, California and includes a state-of-the-art design center. A nationwide customer service and support network complements the organization.

Today Sony is recognized as a leading manufacturer and supplier of integrated circuits. The company is a technology leader in the development of semiconductor solutions for newly-emerging and cutting-edge high performance markets in multimedia, communications and workstation cache memory. Currently it offers a diverse array of innovative products ranging from memory to multimedia, communications, networking and wireless ICs.

Mixed Signal Systems

Analog LCD I/F Chipset

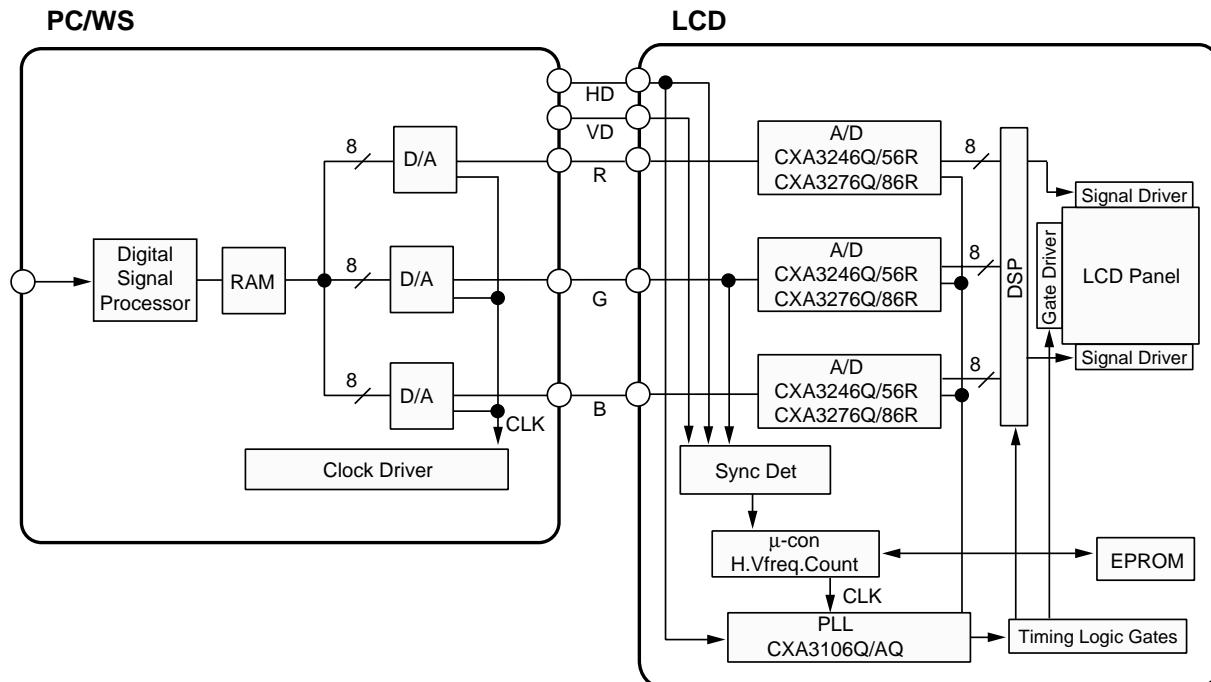

A/D converters and PLLs are provided for LCD monitors and projectors according to the resolution.

In XGA resolution, the A/D converters CXA3246Q (QFP) and CXA3256R (LQFP), and the PLL CXA3106Q are available.

In SXGA resolution, the A/D converters CXA3276Q (QFP) and CXA3286R (LQFP), and the PLL CXA3106AQ are available.

The use of Sony's A/D converters and PLLs enables simple designing of XGA and SXGA with the same concept and gives excellent picture quality. Moreover, the D/A converter CXA3197R, which is capable of TLL interface, is provided for LCD projectors.
