

CMOS Analog Switches

Features

- $\pm 15\text{-V}$ Input Range
- Fast Switching— t_{ON} : 110 ns
- Low $r_{DS(on)}$: 30 Ω
- Single Supply Operation
- CMOS Logic Levels
- Micropower: 30 nW

Benefits

- Full Rail-to-Rail Analog Signal Range
- Low Signal Error
- Wide Dynamic Range
- Low Power Dissipation

Applications

- Low Level Switching Circuits
- Programmable Gain Amplifiers
- Portable and Battery Powered Systems

Description

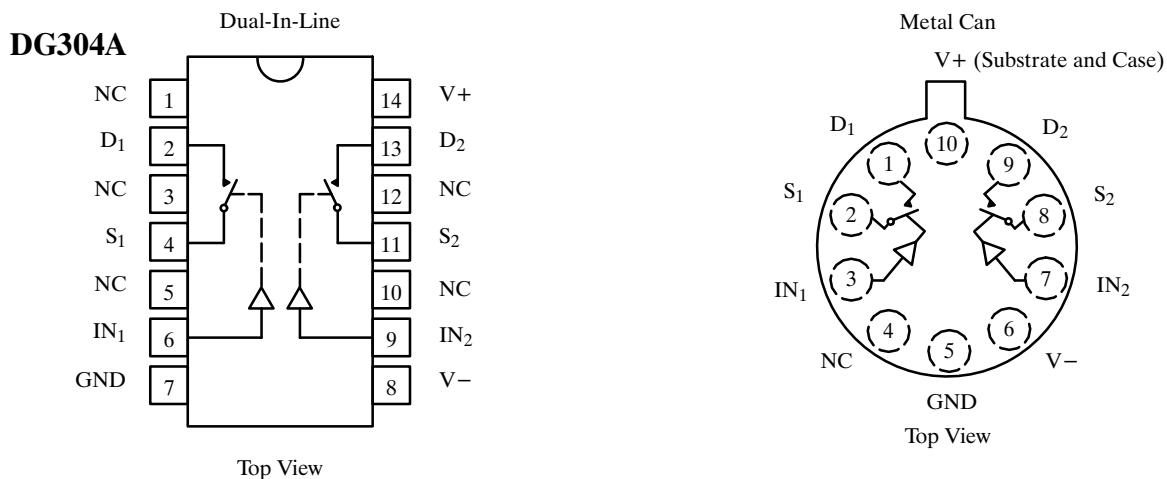

The DG304A through DG307A series of monolithic CMOS switches were designed for applications in communications, instrumentation and process control. This series is well suited for applications requiring fast switching and nearly flat on-resistance over the entire analog range.

Designed on the Siliconix PLUS-40 CMOS process to achieve low power consumption and excellent on/off switch performance, these switches are ideal for

battery powered applications, without sacrificing switching speed. Break-before-make switching action is guaranteed, and an epitaxial layer prevents latchup. Single supply operation (for positive switch voltages) is allowed by connecting the $V-$ rail to 0 V.

Each switch conducts equally well in both directions when on, and blocks up to the supply voltage when off. These switches are CMOS input compatible.

Functional Block Diagram and Pin Configuration

Ordering Information – DG304A

Temp Range	Package	Part Number
-0 to 70°C	14-Pin Plastic DIP	DG304ACJ
-55 to 125°C	14-Pin CerDIP	DG304AAK/883

Notes:

- Refer to PROCESS OPTION FLOWCHART (Section 5 of the 1994 Data Book or FaxBack number 7103).
- Room = 25°C, Full = as determined by the operating temperature suffix.
- Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
- The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- Guaranteed by design, not subject to production test.
- V_{IN} = input voltage to perform proper function.
