U2793B-FS

300-MHz Quadrature Modulator

Description

The IC U2793B is a 300-MHz quadrature modulator that uses TELEFUNKEN's advanced UHF process. It features low current consumption, single-ended RF ports and adjustment-free application, which makes the device suitable for all digital radio systems, e.g., GSM, PCN, JDC and WLAN. As an option, output level and spurious products are adjustable at Pins 19 and 20. In conjunction with TEMIC's U2795B mixer, an up converter up to 2 GHz can be realized.

Features

- Supply voltage: 5 V (typical)
- Low power consumption: 15 mA / 5 V (typical at 0 dBm output level
- Output level and spurious products adjustable (optional)
- Excellent sideband suppression by means of duty cycle regeneration of the LO input signal
- Phase control loop for precise 90° phase shifting
- Power down mode
- Low LO input level: –15 dBm (typical)
- 50-Ω single-ended LO and RF port
- LO frequency range of 30 MHz to 300 MHz
- SSO-20 package

Benefits

- Extended talk time due to increased battery life
- Few external components results in cost and board space saving
- Adjustment free hence saves time
- Modular system for different applications by adding U2795B reduces the costs

Note:
1 Required LO level is a function of the LO frequency.
2 The LO input impedance is consisting of a 50 Ω resistor in series with a 15 pF capacitor
3 With the Pins 19 and 20 spurious performance especially for low frequency application can be improved by adding a chip capacitor between LP1 and LP2. In conjunction with a parallel resistor the output level can be adjusted to the following mixer stage without degration of LO suppression and noise performance which would decrease if the I/Q input level is reduced.
