Potentiometers and Trimmers

These application notes are valid unless otherwise specified in the data sheets

1. GENERAL DEFINITIONS

1.1 - Potentiometer

A potentiometer is a mechanically actuated variable resistor with three terminals. Two of the terminals are linked to the ends of the resistive element and the third is connected to a mobile contact moving over the resistive track. The output voltage becomes a function of the position of this contact. Potentiometer is advised to be used as a voltage divider.

1.2 - Trimming potentiometer (trimmer)

A potentiometer designed for relatively infrequent adjustments

1.3 - Multi-ganged potentiometer

A potentiometer with two or more sections, each electrically independent, operated by a common spindle.

1.4 - Multi-turn potentiometer

A potentiometer with a shaft rotation of more than 360° from one end of the resistive element to the other. Multi-turn types are usually trimming or precision potentiometers.

1.5 - Sealed potentiometers

Two levels of sealing are usually recognized. The less severe one provides protection only against dust and cleaning processes (solvent splashes and vapors). For definition of sealing, see table "Protection Levels" at the end of these Application Notes. Hermetic sealing is more rigorous and protects the product against environmental pressure. (Not applicable for trimmers and potentiometers)

1.6 - Panel seal

This is used to seal the cut-out hole through which the potentiometer is mounted.

1.7 - Spindle seal

One or more O-rings are used to seal the spindle/case joint.

2. MECHANICAL DEFINITIONS

2.1 - Mechanical travel

The full extent of travel between the end stops of the spindle (Fig. 1). In potentiometers fitted with a slipping clutch, the position of the end stops is defined as those points where the clutch starts to slip at each end of the travel of the moving contact.

2.2 - Actual electrical travel

The angle of rotation of the spindle throughout which the resistance changes in the manner prescribed by the specified resistance law. (Fig. 1)

2.3 - End stop torque

The maximum torque that may be applied to the spindle when set against either end stop without causing any damage.

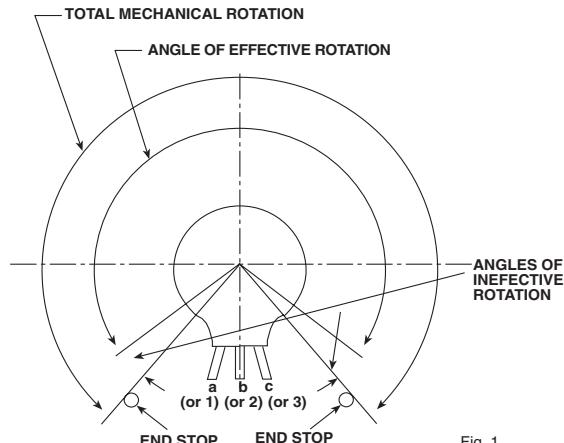

Fig. 1

2.4 - Operating torque

The necessary torque to move the contact in either direction from a random position away from end stops.

2.5 - Locking torque

The torque that may be applied to the shaft of a potentiometer fitted with a locking device without causing shaft rotation.

2.6 - Rotational life

The minimum number of cycles of operations obtainable under specified operating conditions while performance parameters (e.g., resistance rotational noise, torque, etc.) remain within specifications. A cycle is defined as the travel of the moving contact from end to end of the resistance element, and back.

2.7 - Direction of rotation

Rotation is defined as clockwise or counter-clockwise when viewing the surface of the potentiometer which, includes the means of actuation.

2.8 - Adjustment shaft

The mechanical input member of a potentiometer which, when rotated, causes the wiper to travel the resistance element resulting in a change in output voltage or resistance.

2.8.2 - Single-turn Adjustment

Requires 360° or less mechanical input to cause the wiper to travel the total resistance element.

2.8.2 - Multi-turn Adjustment

Requires more than 360° mechanical input to cause the wiper to travel the total resistance element.

2.9 - Terminal

An external contact that provides electrical connection to the resistance element and wiper.

2.9.1 - Printed Circuit Terminal

Rigid non-insulated electrical conductor suitable for printed circuit board

2.9.2 - Solder Lug Terminal

Rigid non-insulated electrical conductor suitable for external lead attachment

2.9.3 - Leadwire Type

Flexible insulated conductor

2.10 - Stop clutch

A device that allows the wiper to idle at the ends of the resistance element without damage while the adjustment shaft continues to be actuated in the same direction.

2.11 - Stop

A positive limit to mechanical and electrical adjustment.

3. INPUT AND OUTPUT TERMS

3.1 Input terms

3.1.1 - Total Applied Voltage

(E) The total voltage applied between the designated input terminals.

Note: When plus (+) and minus (-) voltages are applied to the potentiometer, the total applied voltage (commonly called peak-to-peak applied voltage) is equal to the sum of the two voltages. Each individual voltage is referred to as zero-to-peak applied voltage.

3.2 - Output terms

3.2.1 - Output Voltage

(e/E) The voltage between the wiper terminal and the designated reference points. Unless otherwise specified, the designated reference point is the counter-clockwise (CCW) terminal.

3.2.2 - Output Voltage Adjustment Ratio

(e/E) The ratio of the output voltage to the designated input reference voltage. Unless otherwise specified the reference voltage is the total applied voltage.

3.2.3 - Output Resistance

The resistance measured between the wiper terminal and the designated reference point. Unless otherwise specified, the designated reference point is the CCW terminal.

3.3 - Load terms

3.3.1 - Load Resistance

(R) The external resistance as seen by the output voltage (connected between the wiper terminal and the designated reference point).

Note: No load means an infinite load resistance.

4. ELECTRICAL DEFINITIONS

4.1 - Power rating

The maximum power that can be dissipated across the total resistance element, i.e., between terminals a (or 1) and c (or 3), at the specified ambient temperature. In practice this dissipation is modified by the following conditions:

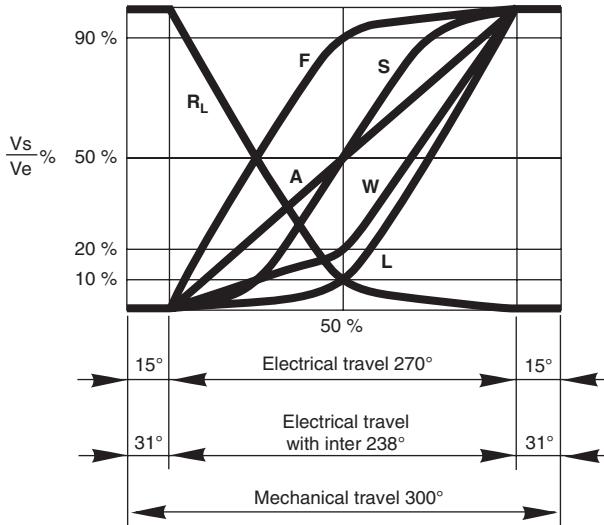

4.1.1 - For ambient temperatures higher than that specified, reference should be made to the derating curve.

4.1.2 - For high values of resistance, the limiting element voltage may prevent the maximum power rating from being obtained.

4.1.3 - For situations when the power is dissipated in only part of the resistance element, the maximum current capacity of the element will prohibit maximum total power dissipation.

4.2 - Resistance law

The relationship between the mechanical position of the moving contact and the resistance value across terminals a and b. (This may also be expressed as the relationship between the position of the moving contact and the ratio V_{ab}/V_{ac}). Typical available laws are indicated in Figure 2.

- A Linear (A law)
- L Clockwise logarithmic 10 % (L law) (audio taper)
- F Inverse, clockwise, logarithmic (F law)
- R_L Counter-clockwise, logarithmic (RL law)
- W Clockwise logarithmic 20 % (W law)

4.3 - Conformity

This is a measure of the maximum deviation of the actual to the correspondant theoretical voltage expressed as percent of the total applied voltage.

4.4 - Linearity

The conformity where the theoretical resistance law is a straight line.

Application Notes

Vishay

Potentiometers and Trimmers

4.5 - Total resistance

The resistance value of the resistive element measured between connections a and c or 1 and 3 in conditions defined by CECC 41000:

Temperature: + 20 °C ± 1 °C

Relative humidity: 65 % ± 2 %

This value has to be included between limits of resistance nominal value according to tolerance.

4.5.1 - Minimum Effective Resistance

The resistance value at each end of the effective rotation between termination b (or 2) and the nearest end termination, a or c (1 or 3).

4.6 - Effective resistance

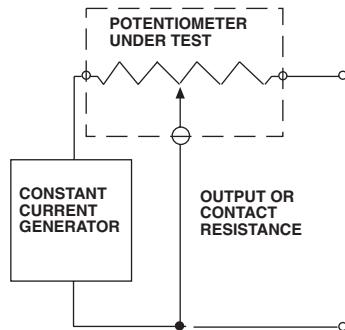

The portion of the total resistance over which the resistance changes in accordance with the declared resistance law. It is the total resistance minus the sum of the two minimum effective resistance values.

4.7 - End resistance

The resistance measured between termination a or c and termination b when the moving contact is positioned at the corresponding end of mechanical travel.

4.8 - Contact resistance

The resistance appearing between the contact and the resistive element when the shaft is rotated or translated. The wiper of the potentiometer is excited by a specific current and moved at a specified speed over a specified portion of the actual electrical travel.

4.9 - Continuity

Continuity is the maintenance of continuous electrical contact between the wiper and the resistive element over the total mechanical travel in both directions.

4.10 - Setting stability

For a fixed setting of the adjustment shaft, the amount of change in the output voltage due to the effects of an environmental condition, (expressed as a percentage of the total applied voltage).

4.11 - Setting ability

A measure of the ability for the user to adjust the wiper to any particular voltage ratio or resistance output.

4.12 - Resolution

This term is used in the description of wirewound potentiometers and is a measure of the sensitivity to which the output ratio of the potentiometer may be set. The theoretical resolution is the reciprocal of the number of turns of the resistance winding in the actual electrical travel multiplied by 100 i.e., (expressed as a percentage).

4.13 - Limiting element voltage

The maximum voltage that may be applied across the element of a potentiometer, provided that the power rating is not exceeded.

4.14 - Insulation voltage

The maximum voltage which may be applied under continuous operating conditions between any potentiometer termination and other external conductive parts connected together. The insulation voltage is not less than 1.4 times the limiting element voltage.

4.15 - Dielectric strength (voltage proof)

The maximum voltage which may be applied under 1 ATM pressure for 60 s between any potentiometer termination and any external conductive part without breakdown occurring. Dielectric strength is not less than 1.4 times the insulation voltage.

4.16 - Insulation resistance

The resistance measured between the terminals and other external conductive parts (e.g., shaft, housing, or mounting), when a specified D.C. voltage is applied.

4.17 - Temperature coefficient of resistance (TCR)

The unit change in resistance per °C change from a reference temperature, expressed in parts per million per °C as follows:

$$TC = \frac{R_2 - R_1}{(T_2 - T_1)R_1} \times 10^6$$

Where :

R₁ = Resistance in ohms, at reference temperature

R₂ = Resistance in ohms, at test temperature

T₁ = Reference temperature in °C

T₂ = Test temperature in °C

5. ENVIRONMENTAL DEFINITIONS

5.1 - Climatic category

The climatic category is defined in terms of the temperature extremes (hot and cold) and number of days exposure to dampness, heat, and steady-state conditions that the component is designed to withstand.

The category is indicated by a series of three sets of digits, separated by oblique strokes, as follows:

- First set: Two digits denoting the minimum ambient temperature of operation (cold test).
- Second set: Three digits denoting the upper category temperature (at that temperature the allowed dissipation is at least 25 %).

The maximum allowable temperature with zero dissipation is higher than the upper category temperature.

- Third set: Two digits denoting the number of days used for the "dampness, heat, and steady-state" test.

Example: P13: 55/100/56

Cold: - 55 °C

Upper category temperature: + 100 °C

(maximum allowable temperature: + 125 °C)

Damp heat: 56 days.

5.2 - Classify materials

Plastic materials used are UL94 class VO and/or our products are compliant with the flammability test of STD UL746C § 17 and 52.

6. STORAGE RECOMMENDATIONS

Careful attention must be paid when the components are stored. Because high and very low environmental temperature, high humidity, corrosive gases, etc. might affect the solderability of the terminals and the function of the package. Listed below are notes to be observed:

- The recommended storage conditions are in between + 10 °C and 25 °C (room temperature) at a relative humidity in between 35 % and 75 %.
- Do not store them within the vicinity of any corrosive gases such as hydrogen sulphide, sulphurous acid, chlorine or ammonium. The oxidation of the metals caused by such toxic gases may affect solderability as well as the electrical and mechanical performance of these products.
- Exposure to the direct sunlight and dust must be avoided
- Handle carefully to avoid deformation of terminals
- Keep parts in the original packages until just before use, and unpack only the quantity needed. Always seal any opened packages to protect them from oxidation and contaminants.
- Moisture Sensitive Level (MSL) for applicable SMD components, following storage conditions should be applied.

MSL LEVEL	FLOOR LIFE	
	TIME	CONDITIONS
1	Unlimited	≤ 30 °C/85 % RH
2	1 year	≤ 30 °C/60 % RH
2A	4 weeks	≤ 30 °C/60 % RH
3	168 hours	≤ 30 °C/60 % RH
4	72 hours	≤ 30 °C/60 % RH
5	48 hours	≤ 30 °C/60 % RH
5A	24 hours	≤ 30 °C/60 % RH
6	Time on label (TOL)	≤ 30 °C/60 % RH

If any special storage conditions are applied (outside those recommendations), it is the user's responsibility.

7. SMD AND THROUGH HOLE COMPONENTS, SOLDER AND CLEANING RECOMMENDATIONS

VISHAY Trimmers sealed surface mount components are designed to withstand the processes related to Infrared, Hot Air, Vapour Phase Reflow and Dual Wave soldering. They are sealed against flux by means of an O-ring seal or press fit and can withstand exposure to all commonly used defluxing solvents. It is important to note before pre-heating and soldering trimmers, make sure the position of the wiper is not in contact with the end terminals (beginning or end of the wiper mechanical travel) to avoid malfunction of trimmers.

7.1 - Adhesive application (for SMD only)

When an assembly has to be wave soldered, an adhesive is essential to bond the SMDs to the substrate. Under normal conditions reflow, soldered substrates do not need adhesive to maintain trimmer orientation, since the solder paste does it. The amount of adhesive, the curing time and temperature to use should be in accordance with adhesive manufacturer's recommendations. Otherwise, the adhesive polymerization time & temperature have to also respect trimmers soldering recommendations. (§3)

Caution: The height and the volume of adhesive dots applied are critical for two reasons: the dot must be high enough to reach the SMD, and there must not be any excess adhesive, since this can pollute the solder land and prevent the formation of a good soldered joint.

7.2 - Flux and solder recommendations

SMD & Through hole components can be used with R & RA (Rosin & Rosin Activated) type flux to OA (Organic Acid). It is always advisable not to use a flux of an activity level greater than that necessary to achieve optimum yields for solder wetting. Fluxes of RA and OA activity levels are corrosive and therefore must be removed. It is advisable that all types of fluxes be removed by cleaning due to the possibility of corrosion.

Caution: Avoid highly activated fluxes. Consult factory before using OA.

Suggested Solder composition is:

- Tin Lead solder:
Sn63/Pb37
- Lead (Pb)-free solder:
Sn96.5/Ag3/Cu0.5

Typical solder paste print thickness would be 0.8 to 1 mm thick

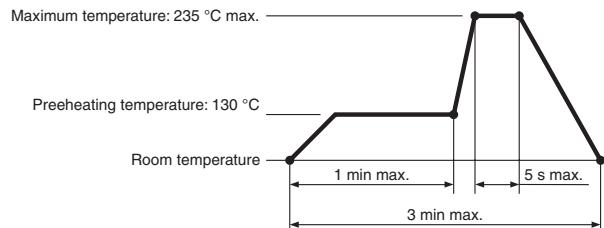

7.3 - Soldering recommendations

Normal preheating is required to activate flux and minimize thermal shock to components. The maximum recommended temperature for flow and reflow soldering profiles are specified below. It is important to note temperature of those profiles corresponds to parts temperature (and not PCB temperature). The use of leaded solder process or lead (Pb)-free solder process is specified under each series of SMD or through hole products.

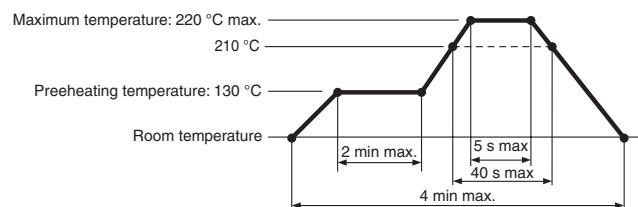

General Caution: User must always test and verify pre-heating and soldering processes as well as other production line assembly before final production.

Leaded solder process

Wave soldering (1 time max.)

Infrared or Hot Air reflow soldering (2 times max.) (for SMD only)

Application Notes

Vishay

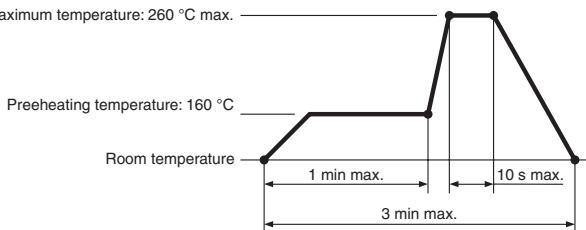

Potentiometers and Trimmers

Lead (Pb)-free solder process

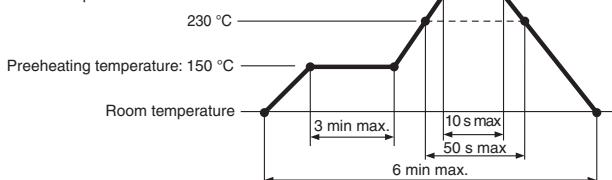

Wave soldering (1 time max.)

Maximum temperature: 260 °C max.

Infrared or Hot Air reflow soldering (2 times max.) (for SMD only)

Maximum temperature: 260 °C max.

Vapor phase reflow: Vapour with 215 °C condensation temperature for a period not more than 2 minutes

Soldering iron caution: Use the appropriate soldering iron size, shape and heat capacity for soldering SMD trimmers. Do not exceed the maximum time and temperature parameters specified: 3 s at 350 °C. Never touch the body of the trimmer or potentiometer with the soldering iron.

Infrared soldering caution: If the infrared radiation is the heat source, the temperature increase of the SMD trimmers should be carefully checked because the radiation absorption rate depends on the color and the structure of the material of trimmers.

7.4 - Washing recommendations (refer to protection level of the component)

Cooling down time after soldering and before exposure to defluxing solvents is required. The component body temperature when exposed to cleaning should not exceed 60 °C. Cleaning spray rinse is recommended with pressures of not greater than 60 psi (5.5 kg-cm²) for a period not to exceed 15 - 20 seconds.

Appropriate defluxing solvent/Aqueous:

- Aqueous detergent solutions
- Terpene based semiaqueous
- Ester/Ether based solvents
- Methanol
- HAS - HCFC

Caution: • Avoid using cleaning solvents such as Trichloroethane or Freon which endanger the environment
• Ultrasonic may cause component damage or failure

7.5 - Reworking recommendations

- General: Excessive and/or repeated high temperature heat exposure may affect component performance and reliability
- Recommended: Hot air reflow technique is the safest method for SMD component
- Caution: Avoid use of a soldering iron or wave soldering as a rework technique

7.6 - Adjustment recommendations

Adjustment of components should be done only after part has reached ambient temperature and cleaning solvent has evaporated (10 minutes).

PROTECTION LEVELS			
FIRST DIGIT PROTECTION AGAINST SOLID SUBSTANCES			
SECOND DIGIT PROTECTION AGAINST LIQUIDS			
IP	Tests	IP	Tests
0	Without Protection	0	Without Protection
1	Protected against solid substances (size > 50 mm)	1	Protected against water drops (condensation)
2	Protected against solid substances (size > 12 mm)	2	Protected against water drops from up to 15 feet
3	Protected against solid substances (size > 2.5 mm)	3	Protected against water drops from up to 60 feet
4	Protected against solid substances (size > 1 mm)	4	Protected against water drops from above 60 feet
5	Protected against dust (> 0.1 mm < 1 mm)	5	Protected against splashes of water in all directions
6	Fully protected against dust	6	Protected against projections of water in all directions
		7	Protected against action of immersion < 15 cm and water jet pressure in all directions
		8	Protected against long time action of immersion < 1 meter and water jet pressure in all directions

Note: To symbolize the protection levels, we use IP letters followed by 2 digits.

Cermet Trimmers Surface Mount, 4.0 mm Square, Single Turn, Industrial Grade

DIMENSIONS in millimeters

Recommended PCB Footprint

Recommended PCB Footprint

NOTE: All tolerances are $\pm 0.010"$ [0.25 mm] unless otherwise specified.

MECHANICAL SPECIFICATIONS

Mechanical Angle:	240° nominal
Operating Torque:	1.8 Ncm typical
End Stop Torque:	3.0 Ncm typical
Weight:	Approximately 0.01 ounce
Wiper:	Positioned at 50% nominal
Flammability:	UL 94V-0

Vibration:	20 G (total resistance shift $\pm 1\%$, voltage ratio shift $\pm 1\%$)
Shock:	100 G (total resistance shift $\pm 1\%$, voltage ratio shift $\pm 1\%$)
Load Life:	At + 70 °C rated power 1000 hours (total resistance shift $\pm 3\%$)
Rotational Life:	100 cycles (total resistance shift $\pm 3\%$)
Thermal Shock:	5 cycles (total resistance shift $\pm 2\%$, voltage ratio shift $\pm 1\%$)

ENVIRONMENTAL SPECIFICATIONS

Temperature Range:	- 55 °C to + 125 °C
Humidity:	90 - 98 % relative humidity 10 cycles, 240 hours, (total resistance shift $\pm 2\%$, insulation resistance 10 MΩ)

ELECTRICAL SPECIFICATIONS

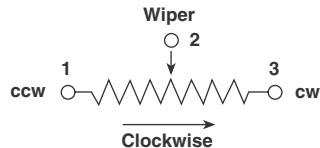

Resistive Range	10 Ω to 2 MΩ (See Standard Resistance Table)
Tolerance	$\pm 20\%$ standard
End Resistance	1 % or 2 Ω maximum, whichever is greater
Temperature Coefficient	$\pm 100 \text{ ppm/}^{\circ}\text{C}$
Power Rating	(300 volts maximum) 0.25 watt at + 70 °C, 0 watt at + 125 °C
Contact Resistance Variation (CRV)	1 % or 3 Ω
Resolution	Infinite
Insulation Resistance (500 VDC)	100 MΩ minimum
Dielectric Strength	Sea level 500 VAC (1 minute)
Adjustment Angle	210° nominal

Surface Mount Miniature Trimmers Single-Turn Cermet Fully Sealed

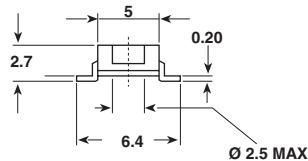

The TS5 trimming potentiometer has been designed for surface mount applications and offers volumetric efficiency ($5 \times 5 \times 2.7$ mm) with high performance and stability.

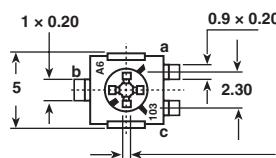

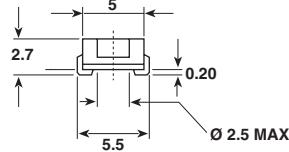

The TS5 design is suitable for both manual or automatic operation, and can withstand wave and reflow soldering techniques.

DIMENSIONS in millimeters

TS5YL

TS5YJ

cruciform screwdriver slot
 \varnothing 2.5, width 0.5
 deep: 0.55
 max deep (center): 0.7

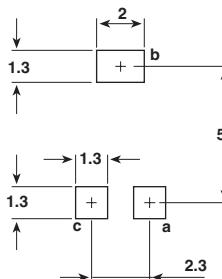

FEATURES

- 0.25 Watt at 70 °C
- CECC 41100
- GAM T1
- Professional grade
- Wide ohmic range (10 Ω to 1 MΩ)
- Full sealing
- Low contact resistance variation (1 % or 3 Ω)
- Small size for optimum packing density
- Suitable for both manual or automatic operation

Multi-Turn Surface Mount Miniature 1/4" Square Cermet Trimmers, Fully Sealed

The TS6 multi-turn trimmer has been designed for use in PCB surface mounting applications.

Three variations are available according to the positioning of the control screw and contact positions.

The cermet track gives a high stability performance with an extended ohmic capacity of $10\ \Omega$ to $2\ M\Omega$

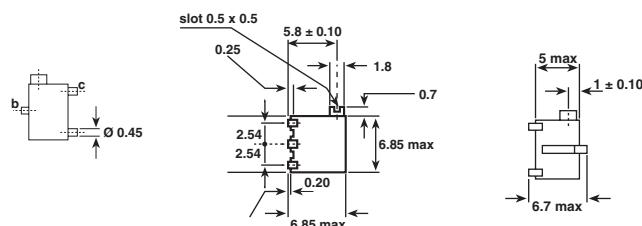

FEATURES

- 0.25 Watt at $85\ ^\circ C$
- GAM T1
- Military and professional grade
- Multi-turn operation
- A low contact resistance variation (down to 2 % R_n)
- Low end contact resistance ($1\ \Omega$ typical)
- Full sealing
- Tests according to CECC 41 000

Miniature Trimmer Single-Turn Cermet

FEATURES

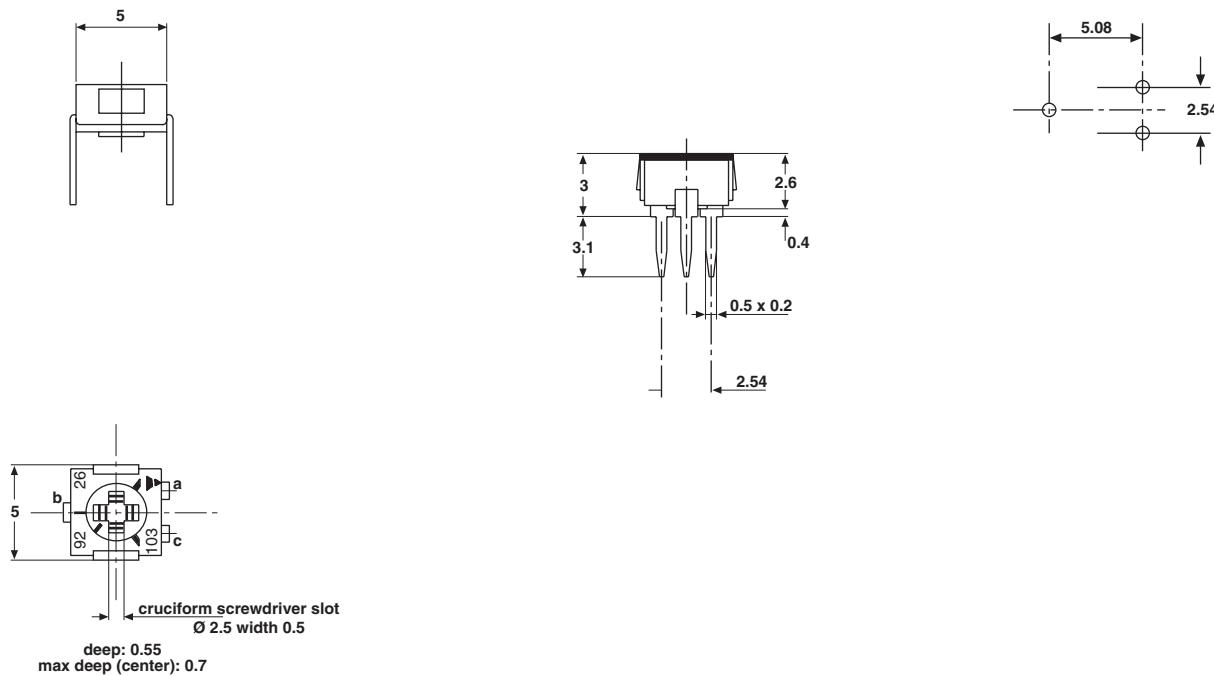

- Fully sealed
- 0.25 Watt at 70 °C
- Wide ohmic range (10 Ω to 1 MΩ)
- Low contact resistance variation (2 % or 3 Ω)
- Small size for optimum packing density
- Suitable for both manual or automatic operation
- For SMD version see TS53Y series

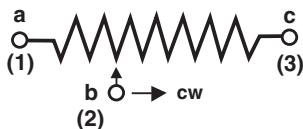

The T53 trimming potentiometer volumetric efficiency (5 x 5 x 2.7 mm) with high performance and stability.

The T53 design is suitable for both manual or automatic operation.

MARKING

VISHAY trademark, ohmic value, manufacturing date.

The ohmic value is indicated by a 3 figure code, the first two are significant figures, the third one is the multiplier.

Example:

100 = 10 Ω
101 = 100 Ω
102 = 1000 Ω
503 = 50 000 Ω

The manufacturing date is indicated by four digits, the first two for the year, the last two for the week number.

Miniature Cermet Trimmers

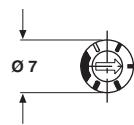

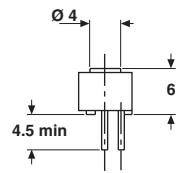

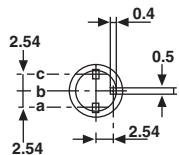

The T7 trimmer is only 7 mm (0.275") in diameter and fits almost anywhere.

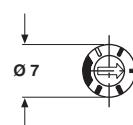

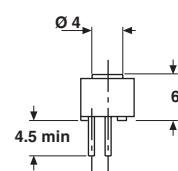

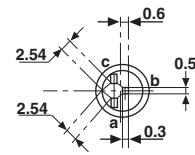

A dust sealed plastic case protecting a quality cermet track guarantees high performance and proven reliability. Adjustments are made easier by the clear scale readings. T7 is ideally suited to all industrial applications.

3/8" Square (10 mm) Single-Turn Cermet Trimmer

The Model 63 cermet trimmer manufactured in Europe is readily available in several pin configurations for top or side adjustment and with a choice of Knob styles for finger setting. Quick adjustment is achieved with multi finger wiper and the standard resistance range is between $10\ \Omega$ and $2\ M\Omega$ with a tolerance of $\pm 10\%$. This sealed (IEC 68-2-17) single turn trimmer is continuing to provide excellent performance as the industry standard across a broad spectrum of applications.

DIMENSIONS in inches (millimeters)

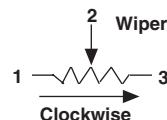

Tolerances unless otherwise specified ± 0.015 (0.38)

FEATURES

- Arrow and graduations for repeatable settings
- "O" ring seal for solvent and aqueous washing
- I.C. style pins for easy PCB assembly
- Rigid board mounting achieved with pins secured in housing
- Solder plated terminals for good solderability
- High temperature soldered terminations for high reliability
- Multi-finger wiper for better contact resistance
- Solid end stop
- Flame retardant housing to U_L rated VO

Fully Sealed Container Cermet Trimmers

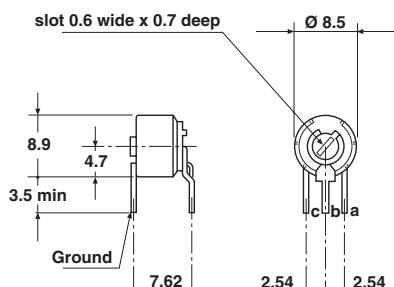

Models P8PX and P8PY feature a TO-5 transistor type, rugged metal case housing.

The cermet track is printed to an alumina substrate allowing high dissipation and ensuring reliable performance under extreme environmental conditions.

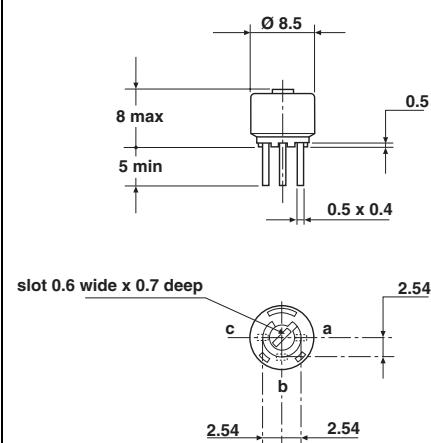

Models P8PX and P8PY are qualified PC 39 and PC 19 respectively according to CECC 41 101-002 mod. A and B.

Fully Sealed Container Cermet Trimmers

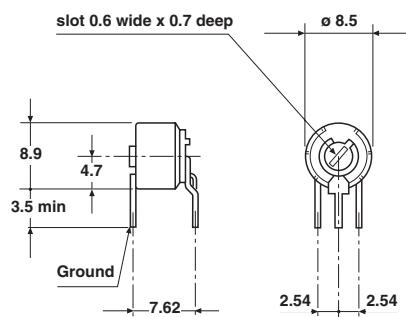

The P8S series trimmers are extremely well adapted for all industrial applications as their maximum resistance contact variation is within 3 % of R_n and as they are fully sealed.

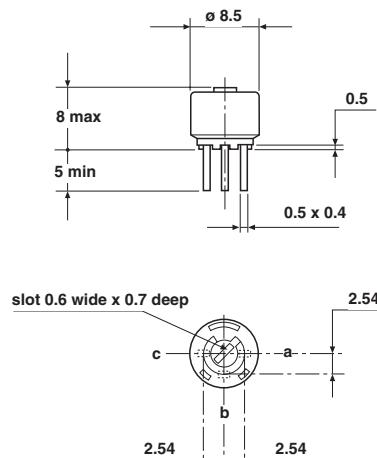

For more stringent requirements the P8P series is recommended.

Fully Sealed Container Square or Round Cermet Trimmers

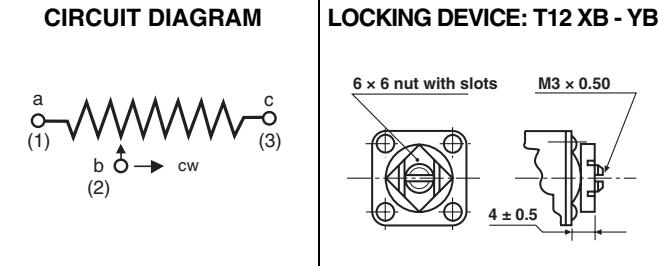

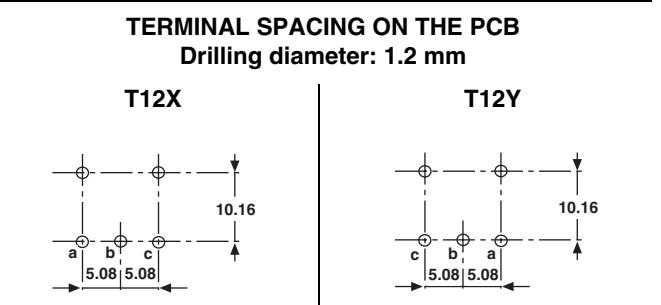

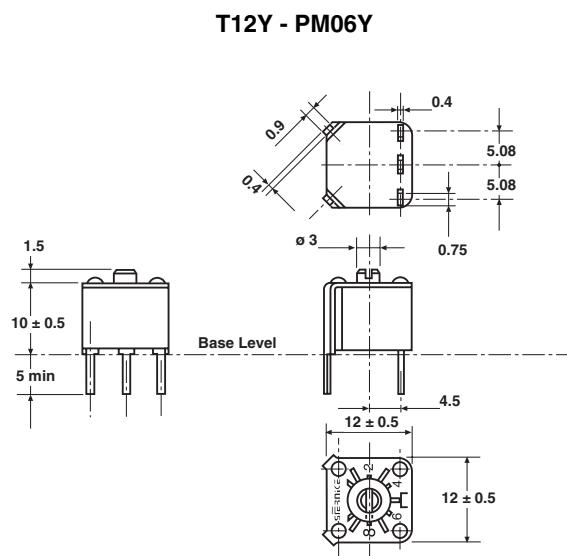

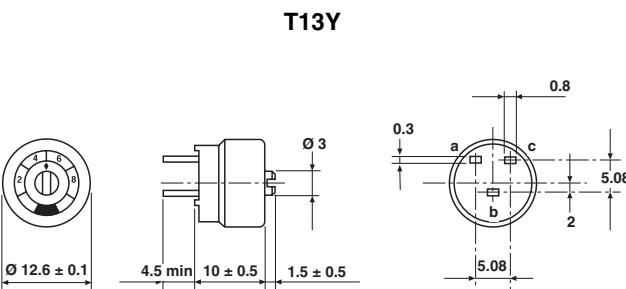

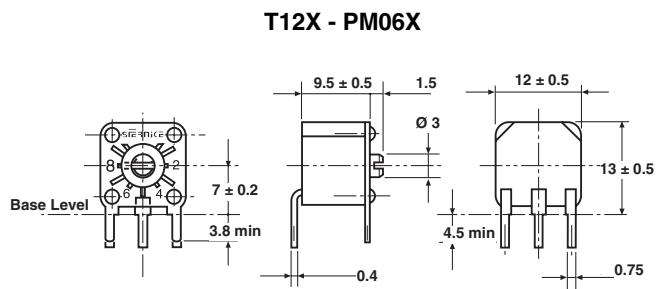

The Vishay SFERNICE trimming potentiometers T12 and T13 fully meet the requirements of CECC 41 100.

The use of a cermet track combined with sealing of the case provides unique characteristics and performances.

T12 and T13 have been specially designed for mounting on printed circuit board.

1/4" Multi-Turn Fully Sealed Container Cermet Trimmers

Due to their square shape and small size (6.8 x 6.8 x 5 mm), the multi-turn trimmers of the T6 series are ideally suited for PCB use, enabling high density board mounting with reduced space requirement between cards.

Four versions are available differing by the top or side position of the adjustment screw and by PC pins configuration.

The use of cermet for the resistive track ensures an excellent stability of nominal specifications throughout life.

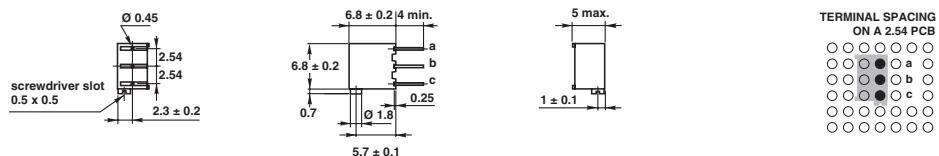

DIMENSIONS in millimeters

FEATURES

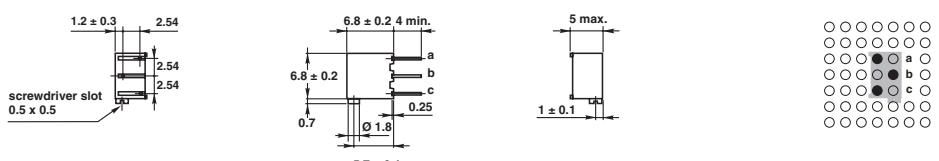

- Military and professional grade
- 0.25 Watt at 85 °C
- CECC 41 100-005 (A, B, C, D)
- Equivalent to MIL-R-22097 (RJ26)
- GAM T1
- Space saving
- Low contact resistance variation 1 % typical
- Fully sealed
- Wide range of ohmic values from 10 Ω to 2.2 MΩ
- Tests according to CECC 41 100

3/4" Rectangular Multi-Turn Cermet Trimmer

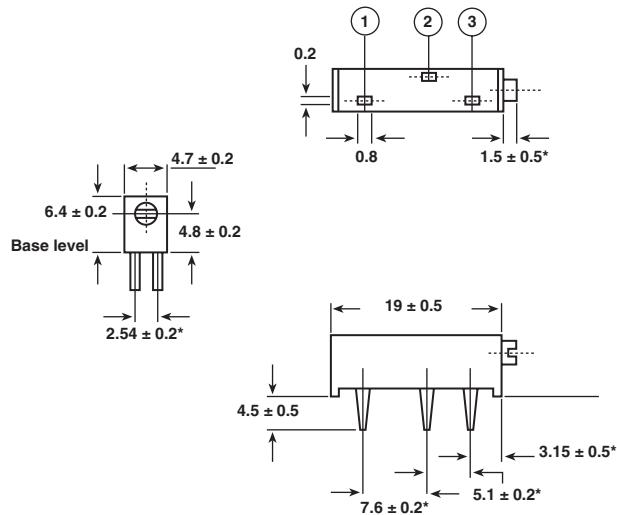

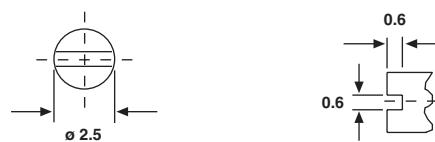

FEATURES

- Industrial Grade
- 0.50 Watt at 70 °C
- MIL-R-22097
- Tests according to CECC 41 000

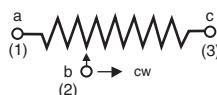

DIMENSIONS in millimeters

T18

SHAFT

* to be measured at base level

CIRCUIT DIAGRAM

Tolerances unless otherwise specified ± 0.5

ELECTRICAL SPECIFICATIONS

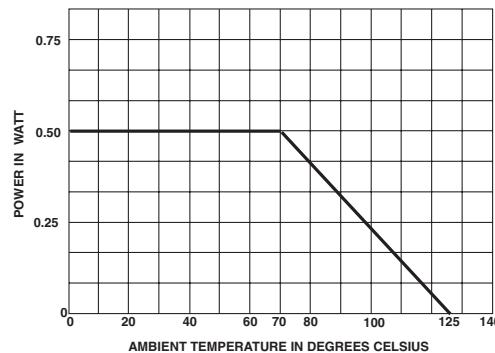

Resistive Element	cermet	
Electrical Travel	15 turns \pm 1	
Resistance Range	10 Ω to 2.2 M Ω	
Standard series E3	1 - 2.2 - 4.7 and 1 - 2 - 5	
Tolerance	Standard	\pm 10 %
	On Request	\pm 5 %
Power Rating	Linear	0.50 W at + 70 °C
	Logarithmic	not applicable
Temperature Coefficient	See Standard Resistance Element Table	
Limiting Element Voltage (Linear Law)	250 V	
Contact Resistance Variation	2 % Rn or 1 Ω	
End Resistance (Typical)	1 Ω	
Dielectric Strength (RMS)	1000 V	
Insulation Resistance (500VDC)	10 ⁶ M Ω	

MECHANICAL SPECIFICATIONS

Mechanical Travel	18 turns \pm 5
Operating Torque (max. Ncm)	2
End Stop Torque	clutch action
Unit Weight (max. g)	1
Wiper (actual travel)	positioned at approx. 50 %

ENVIRONMENTAL SPECIFICATIONS

Temperature Range	- 55 °C to + 125 °C
Climatic Category	55/125/56
Sealing	fully sealed container IP67

3/4" Rectangular (19 mm) Multi-Turn Cermet Trimmer

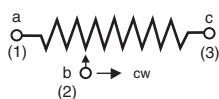

The Model 43 is manufactured to the highest international standards. This product, sealed to 85 °C for 1 minute (IEC. 68-2-17) has an effective travel of 18 turns nominal and a resistance range of 10 Ω to 2 MΩ.

DIMENSIONS in inches (millimeters)

1 - 1/4" Rectangular Multi-Turn Cermet

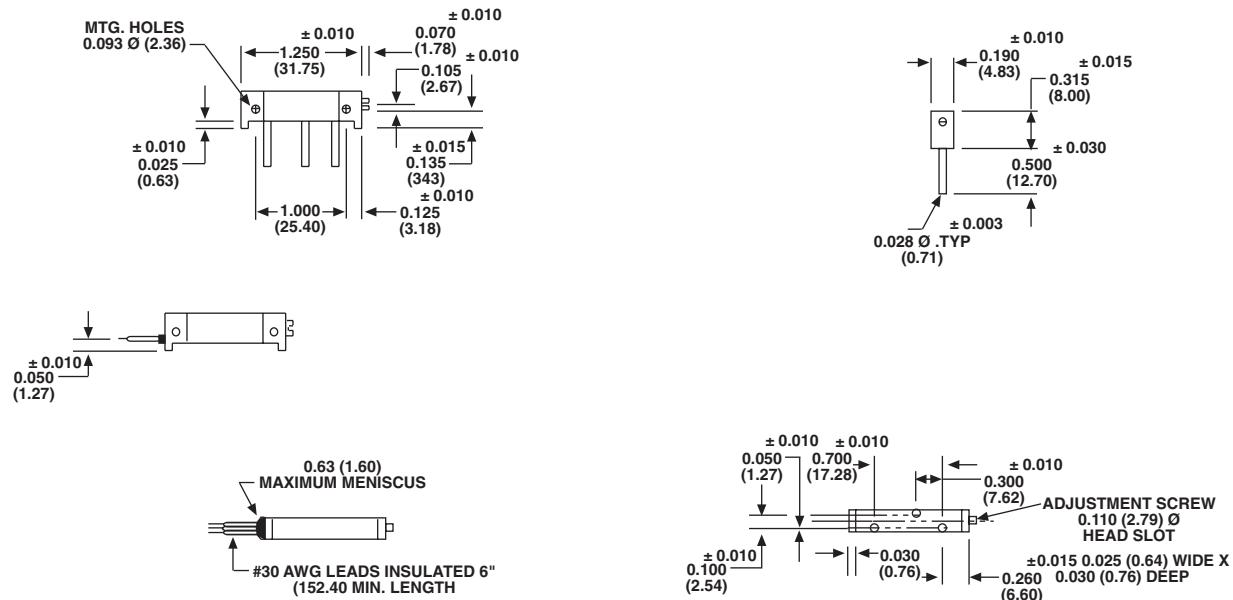

FEATURES

- Unique "T" slider block design
- CRV of 3 % or 3 Ω
- Temperature coefficient of 100 ppm/ $^{\circ}$ C
- RT Tolerance \pm 10 % STD (\pm 5 % Available)

DIMENSIONS in inches (millimeters)

Tolerances unless otherwise specified \pm 0.5

ELECTRICAL SPECIFICATIONS

Resistance Range	10 Ω thru 2 M Ω
Standard Resistance Tolerance	10 %
End Resistance	2 % maximum
Actual Effective Electrical Travel	20 turns nominal
Contact Resistance Variation	3 % or 3 Ω , whichever is greater
Dielectric Withstanding Voltage	1000 VAC at sea level, 350 VAC at 80 000 feet (24.400 meters)
Insulation Resistance	1000 M Ω
Power Rating	1.0 watt at 85 $^{\circ}$ C derated linearly to zero watts at 150 $^{\circ}$ C maximum voltage not to exceed 400 volts
Temperature coefficient of resistance	\pm 100 ppm/ $^{\circ}$ C 100 Ω to 2 M Ω $-$ 100 to 200 ppm/ $^{\circ}$ C 10 Ω , 20 Ω and 50 Ω

MECHANICAL SPECIFICATIONS

Operating Torque	5 oz-in (360 gm-cm) maximum
Rotational Life	200 cycles minimum with loaded circuit, maximum change in resistance 2 % or 500 cycles minimum without discontinuity unloaded
Weight	0.116 oz (3.3 grams) maximum

ENVIRONMENTAL SPECIFICATIONS

		MAXIMUM TOTAL RESISTANCE	CHANGE SETTING
Operating Temperature Range	- 55 °C to + 150 °C	-	-
Terminal Strength	2 lbs (900 gms) minimum push/pull	-	-
Sealed	All units sealed to permit cleaning in common solvents immersion	-	-
Thermal Shock	- 55 °C to + 125 °C, 5 cycles	2 %	1 %
Shock	50 g at 11 ms, 3 successive shocks in 3 directions	1 %	1 %
Vibration	10 - 55 Hz 0.75 mm or 10 g for 6 hours	1 %	1 %
Load Life	1000 hours at rater power 90'/30'	3 %	1 %
High Temperature Exposure	+ 150 °C	3 %	2 %
Resistance to Solder Heat	350 °C for 3 seconds	1 %	-

Modular Potentiometers with Cermet (P11) or Conductive Plastic Elements (PA11)

FEATURES

- CECC 41300
- GAM T11
- P11 version for industrial and military applications
- PA11 version for professional audio applications
- Trimmer version T11/TA11 (see document No. 51021)
- Miniature module size: 12.5 mm square - low current compatibility
- Five shaft diameters and 12 terminal styles
- Multiple assemblies - up to seven modules
- Shaft and panel sealed version
- Up to twenty-one indent positions
- Switch modules
- Concentric shafts
- Motorized version
- Custom designs

POWER RATING CHART

MULTIPLE ASSEMBLIES

Standard assemblies can comprise up to 7 modules in addition to the shaft and bushing module.

Detents module (CV)

Switch modules (RS or RSI)

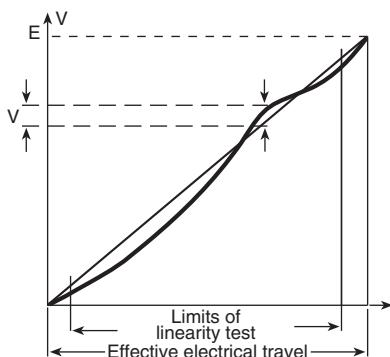

Potentiometer modules

Spacer module (EV) to increase the distance between rows of pins from 5.06 mm (0.200) to 10.16 mm (0.400).

Screening module, with ground terminal.

The position of each module is free except the push/push, momentary push and motor which has to be the last module.

LINEARITY - CONFORMITY

The independent linearity (conformity for the non linear laws) is the maximum gap ΔV between the actual variation curve and the theoretical variation curve the nearest to it. The linearity and the conformity are expressed in percentage of the total applied voltage E

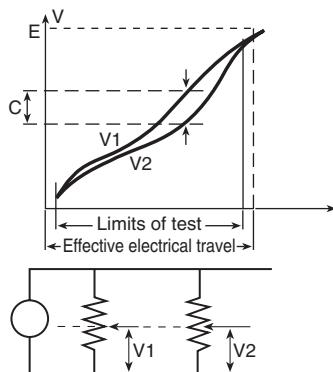

$$\text{linearity conformity} = \frac{\pm \Delta V \text{ max}}{E}$$

They are measured over 90 % of actual electrical travel (centered).

On request linearity can be guaranteed in linear law.

For example: linearity $\pm 2\%$ + J 145 option (see ordering procedure).

INTERLINEARITY - INTERCONFORMITY

It is the maximum deviation between the actual voltage outputs of 2 or more pot modules in the same assembly. It is expressed as a percentage of the total applied voltage, or preferably in dB attenuation.

Interlinearity is measured between 2 pot modules, over 10 to 90 % of the attenuation.

The interlinearity or interconformity is expressed as a percentage of the total applied voltage :

$$I \% = \frac{|CI|}{E}$$

Or in decibels by comparison between outputs V1 and V2

$$I \text{ dB} = 20 \log \frac{V_1}{V_2}$$

OPTIONS

MODULES : RS ON/OFF SWITCH RSI CHANGEOVER SWITCH

The position of each module is free.

RS and RSI rotary switches are housed in a standard P11 module size 12.7 x 12.7 x 5.08 mm (0.5" x 0.5" x 0.2"). They have the same terminal styles as the assembled electrical modules.

CAUTION: Because of the switch actuation travel, the potentiometer total electrical travel is reduced to $240^\circ \pm 10^\circ$

Switch actuation is described as seen from the shaft end.

D: means actuation in maximum CCW position

F: means actuation in maximum CW position

The switch actuation travel is 25° with a total mechanical travel of $300^\circ \pm 5^\circ$.

MODULES : PUSH/PUSH SWITCH RSPP MOMENTARY/PUSH SWITCH RSMP

The switches are manufactured by ITT, F.U. series (NE18 series available on request).

They have to be the last element of potentiometer and are linked to electrical module by an interface.

RSPP and RSMP switches are available only with P11/PA11 T-Q or 7 series not with P11/PA11 V or 2 series.

Options :

2 reversing switches F2 4 reversing switches F4

6 reversing switches F6 8 reversing switches F8

Available with shafts R (T), G (Q), CR (7) others shafts on request.

Not available with panel sealed option.

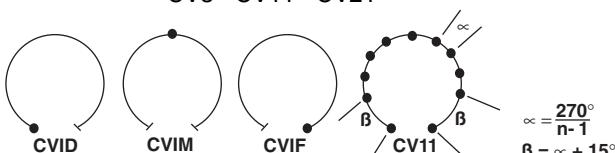

Number of modules before the switch limited to 3 modules.

VALLEY DETENTS

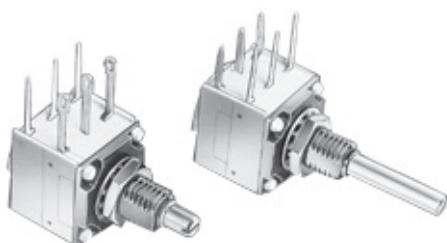

The valley detents mechanism is housed in a standard P11 module. Up to 21 detents position available.

Count detents as follows : 1 for CCW position, 1 for full CW position, plus the other positions forming **equal resistance increments** (linear taper) - **not equal angles**.

Available now : CVID - CVIF - CVIM
CV3 - CV11 - CV21

SWITCH MODULES

RSD SINGLE POLE SWITCH, NORMALLY OPEN

In full CCW position, the contact between 1 and 3 is open. It is made at the beginning of the travel in CW direction.

RSF SINGLE POLE SWITCH, NORMALLY OPEN

In full CW position, the contact between 1 and 3 is open. It is made at the beginning of the travel in CCW direction.

RSID SINGLE POLE CHANGEOVER

In full CCW position, the contact is made between 3 and 2 and open between 3 and 1. Switch actuation (CW direction) reverses these positions.

RSIF SINGLE POLE CHANGEOVER

In full CW position, the contact is made between 1 and 2 and open between 1 and 3. Switch actuation (CCW direction) reverses these positions.

RSPP F2 : PUSH/PUSH SWITCH WITH TWO REVERSING SWITCHES

Idle position : the contact is made between 1 and 2 and a and b. It is open between 2 and 3 and b and c.

Pushed position: the contact is made between 2 and 3 and b and c. It is open between 1 and 2 and a and b.

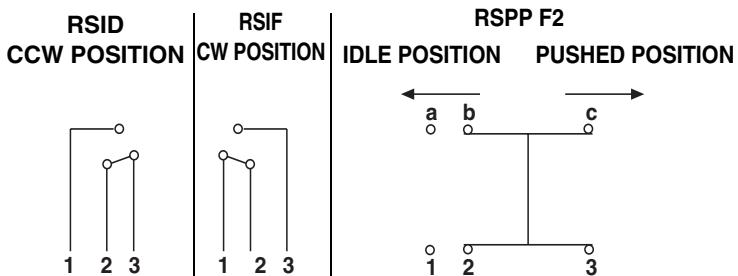

Not available on P11V and P11-2.

On request for P11Q and P11-7.

SWITCH SPECIFICATIONS

MODEL	RS - RSI	F2 to F8

ELECTRICAL DIAGRAM

CENTER TAP "J"

The extra terminal is a solder lug connected at 50 % of electrical travel and situated in the potentiometer module opposite the terminals.

Center tap short circuit 11° of travel.

SHAFTS (see Ordering Information)

The shaft lengths are always measured from the mounting face.

Standard shafts are designed by a letter code (one or two digits). Shafts slots are aligned to $\pm 10^\circ$ of the wiper position.

CONCENTRIC SHAFTS

The CC or 0 or 77 concentric shaft versions allies the total flexibility of the P11/PA11 modular system to the advantage of having two separate shafts.

The outer 6 mm or 1/4" or 1/8" dia. shaft drives the modules situated immediately behind the panel, before the spacer module.

The inner 3 mm or 1/8" or 0.07" dia. shaft drives the modules situated after the spacer module.

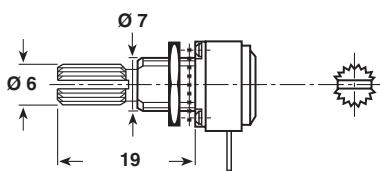

Spacer is available with a choice of two spacer thickness :
 5.08 mm designations: CC, 0, 77

2.54 mm designations: CC-3, 0-3, and 77-3. See dimensional drawings on second page of this data sheet

CUSTOM SHAFTS

When special shafts are required - flat, threaded ends, special shaft lengths, etc. a drawing is required.

SPLINED SHAFT "I"

FLATTED SHAFT

PA11/P11 - 2 = VHM

PA11/P11 - 7 = CDM

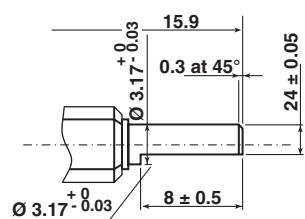

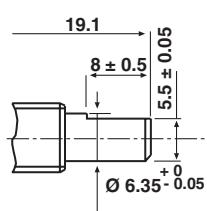

Fig. 9

NEUTRAL MODULE "EN"

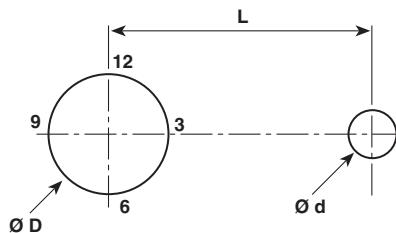

Neutral or screen module is housed in a standard P11 module. It is used as a screen between two electrical modules.

The leads can be connected to ground.

LOCATING PEGS (Anti-rotation lugs)

The locating peg is provided by a plate mounted on the bushing and positioned by the module sides.
 Four set positions are available, clock face orientation: 12, 3, 6, 9.

All P11 bushings have a double flat. When panel mounting holes have been punched accordingly, an anti-rotation log is not necessary.

(2) CLIMATIC CATEGORY

The first figure states the minimum temperature, the second figure corresponds to the maximum temperature of the category (at the maximum temperature of the category, the power dissipation is at least 25 % of the power rating), the third figure corresponds to the number of days of the damp heat test.

3/8" Square Potentiometers Cermet Fully Sealed

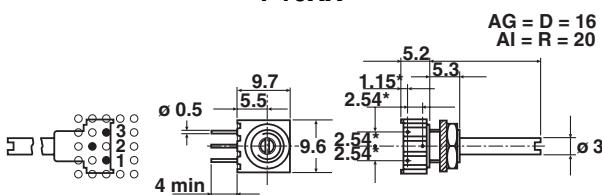

P10 panel potentiometer combines the very good setting stability offered by VISHAY SFERNICE trimmers (due to their proprietary multifinger wiper), with a mechanical life of 10 000 cycles.

It is an ideal choice to set and control parameters such as temperature, time, volume levels, etc.

MARKING

Printed:

- VISHAY trademark
- model
- ohmic value
- manufacturing date
- pin 3

The ohmic value is indicated by a 3 figures code: the first two digits are significant figures, the third digit is the multiplier:

Example: 100 = 10 Ω

101 = 100 Ω

102 = 1000 Ω

503 = 50 000 Ω

The manufacturing date is indicated by a 4 figures code. The first two digits are the year, the last two digits are the week.

SHAFTS

Standard shaft 20 mm length (R or AI code) and 16 mm length (D or AG code) is measured from the mounting face to the free end of the shaft.

Vishay guarantee is lost if the customer modifies the shaft himself.

HARDWARE

Nuts and washer are supplied separately (not mounted on the potentiometer) in a small bag placed in the packaging.

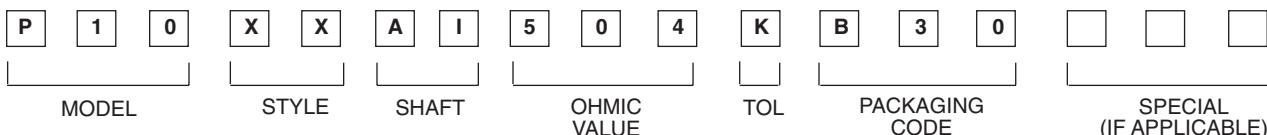

PACKAGING

- Carton boxes of 100 pieces

SPECIAL FEATURES SHAFTS

Lengths are measured from the mounting surface to the free end of shaft. Shaft slot is aligned with the wiper within $\pm 10^\circ$. Special shafts are available, in accordance with drawings supplied by customers. We recommend customers not to machine shafts, in order to avoid damage. Bending or torsion of terminal should be avoided.

SHAFT AND PANEL SEALING HARDWARE

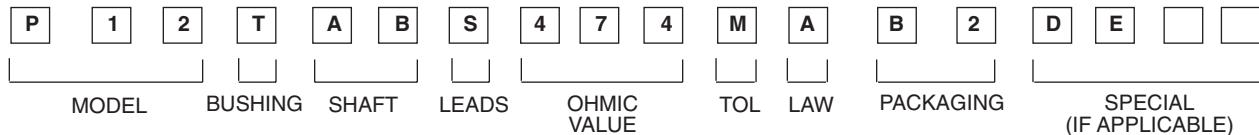

The type P12T with R or M shaft can be provided with an optional "DE" sealing hardware which ensures sealing of both the shaft and the mounting panel. "DE" sealing hardware can be supplied in a separate envelope.

SHAFT LOCKING

- The shaft locking bushing is available only with P12H potentiometers. Torque applied to locking nuts should not exceed 15 Ncm.

Fully Sealed Container Cermet Potentiometers Military and Professional Grade

P13V

P13T

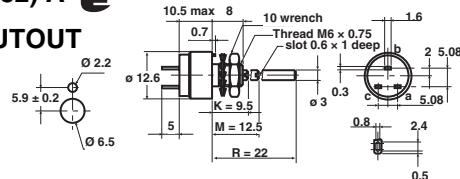

P13 potentiometers fully conform to CECC 41301-001 specification. Their excellent performances are due to the use of a cermet-track sealed in a large case.

P13 interchangeability with RV6, combined with the excellent stability of its rated characteristics make it fully acceptable for military and professional uses.

SPECIAL FEATURES

PANEL SEALING

Potentiometers P13T and P13V can be fitted with a device providing sealing between the threaded bushing and the front panel. Their designation is P13TP and P13VP respectively or with a locating peg P13TPE and P13VPE.

SHAFT

Shaft lengths are measured from the mounting surface to the free end of the potentiometer. Special shafts are available, provided customer supplies a drawing.

The shaft slot is aligned to the wiper within $\pm 10^\circ$.

SHAFT LOCKING

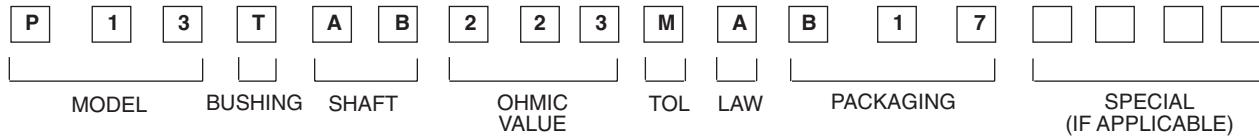

On potentiometers equipped with a 3 mm Ø shaft, shaft locking can be obtained:

- either by a taper nut tightening a slotted bushing. Ask for P13H type. These devices are normally equipped with an L type shaft (12.5 mm with a slot),
- or by a tightening nut locked by a screw. Ask for ES1 type. On potentiometers equipped with a Ø 6 mm shaft, locking can be obtained by a taper nut applying pressure on a slotted notched washer. This device is supplied in a box as an accessory. Ask for DBAN.

These devices are ordered separately. Please consult VISHAY SFERNICE.

PACKAGING

Carton box of 50, code: BO50

PANEL SEALING

Except for dia. 4 mm shaft, an O.ring is supplied with the potentiometer. This O.ring should be placed into the groove of the body and ensures the panel sealing.

For dia. 4 mm shaft please see note "P" in ordering information.

SHAFTS

Shaft lengths are measured from the mounting face to the free end of the shaft. Special shafts are available if the customer supplies a drawing. The shaft slot is aligned to the wiper within $\pm 10^\circ$.

HARDWARE

Nuts, washer and O.ring are **separately supplied** (not mounted on the potentiometer), in a small bag placed in the packaging.

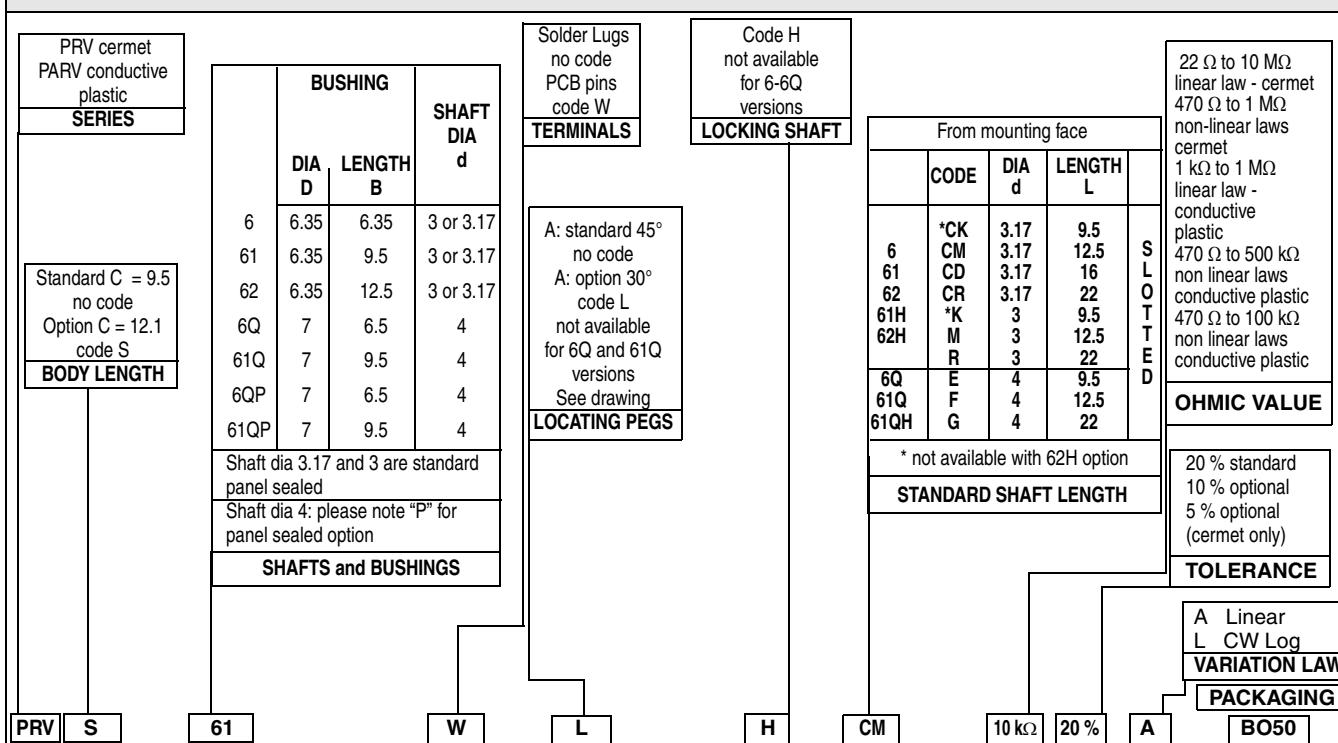

LOCATING PEG

Except for dia. 4 mm shaft, the potentiometers are delivered with 2 opposite locating pegs orientated at 45°. These 2 pegs can be easily broken-off by the customer. On request, the orientation of the pegs can be at 30° instead of 45°. Order Designation: PRV6 L (see ordering information)

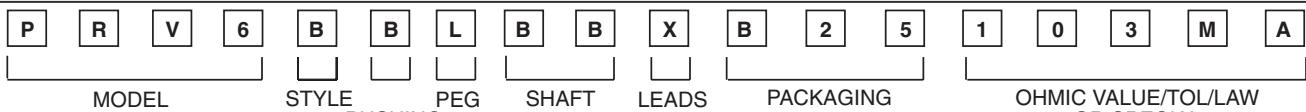

MARKING

VISHAY trademark, series, style, ohmic value (in Ω , $k\Omega$ or $M\Omega$), tolerance in %, taper code, manufacturing date (4 digits: 2 for year, 2 for week), terminal 1.

Knob Potentiometer

The P16 is a revolutionary concept in panel mounted potentiometers. This unique design consists of a knob driving and incorporating a cermet potentiometer. Only the mounting hardware and terminals are situated on the back side of the panel reducing to a minimum the required clearance.

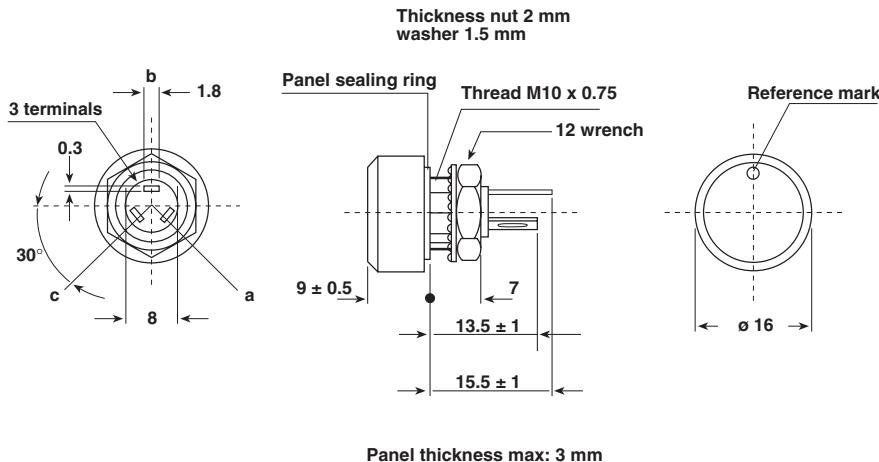

FEATURES

- 1 Watt at 40 °C
- Test according to CECC 41300
- **P16** - version for professional and industrial applications
- **PA16** - version for professional audio applications
- Compact (integrated)
- Minimum clearance required
- Safety in use due to good insulation: $> 10^4 \text{ M}\Omega$ 500 V_{DC}
- High dielectric strength: 2500 V_{RMS}
- Fully sealed and panel sealed
- Metallic or plastic knob options
- Cermet or conductive plastic

PE30

DBAN SHAFT LOCKING

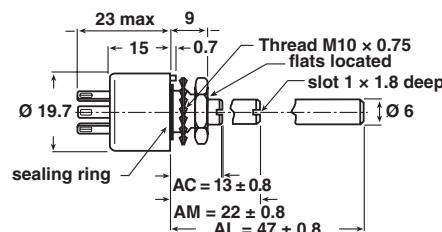

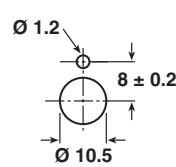

PE30 LPRP - WITH LOCATING PEG

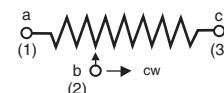

Panel sealed version

PE30P - PE30PE

PE: Including locating peg

CIRCUIT DIAGRAM

Tolerance unless otherwise specified ± 0.5

**SPECIAL FEATURES
COMMAND SHAFT**

Length is measured from the mounting surface to the free end of the shaft. The screwdriver slot is aligned with the wiper within $\pm 10^\circ$. Special shafts are available, in accordance to drawings supplied by customers. We recommend that customers should not machine shafts, in order to avoid damage. Bending or torsion of terminals should also be avoided.

PANEL SEALING: PE30P

The panel sealing device consists of a ring located in a slot on the potentiometer face. Sealing is obtained by tightening the ring against the panel when mounting the potentiometer.

LINEARITY

The typical linearity of linear variation law potentiometers is $\pm 5\%$. Guaranteed linearity on request. Consult VISHAY.

SHAFT LOCKING: DBAN

The shaft locking device consists of a tapered nut tightening a slotted notched washer against both bushing and shaft. DBAN tightening torque is 200 Ncm, shaft locking torque being 30 Ncm.

DBAN is also available with all special types.

This device is normally supplied in a separate bag. Can be pre-mounted on request.

LOCATING PEG: LPRP

Location is obtained by fitting a special washer in 2 holes drilled at 180° in the potentiometer face.

PE60M

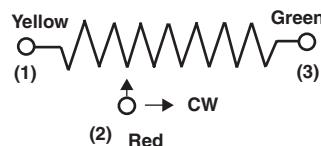

OPTION E: Including locating peg (Available only for PE60M)

Tolerance unless otherwise specified: ± 0.5

Available in 6.35 Dia (Code GD - GJ - GP)

CIRCUIT DIAGRAM

SPECIAL FEATURES COMMAND SHAFT

Length is measured from the mounting surface to the free end of the shaft. The screwdriver slot is aligned with the wiper within $\pm 10^\circ$. Special shafts are available, in accordance to drawings supplied by customers. We recommend that customers should not machine shafts, in order to avoid damage. Bending or torsion of terminals should also be avoided.

PANEL SEALING: PE60M

The panel sealing device consists of a ring located in a slot on the potentiometer face. Sealing is obtained by tightening the ring against the panel when mounting the potentiometer.

SHAFT LOCKING: DBAN

The shaft locking device consists of a tapered nut tightening a slotted notched washer against both bushing and shaft. DBAN tightening torque is 200 Ncm, shaft locking torque being 30 Ncm.

DBAN is also available with all special types.

This device is normally supplied in a separate bag. Can be pre-mounted on request.

LOCATING PEG: LPRP

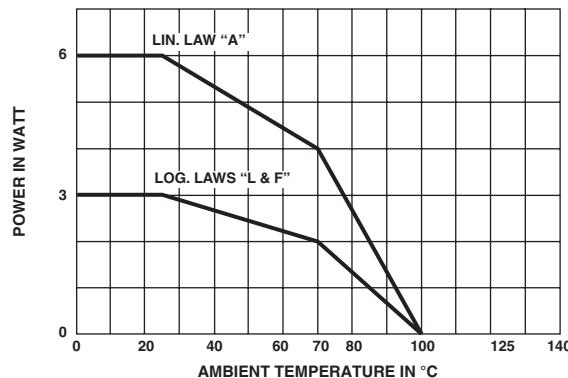

Location is obtained by fitting a special washer in 2 holes drilled at 180° in the potentiometer face. The peg can therefore be positioned at 90° , 180° , 270° and 360° .

Snap-On Panel Mount Adapters

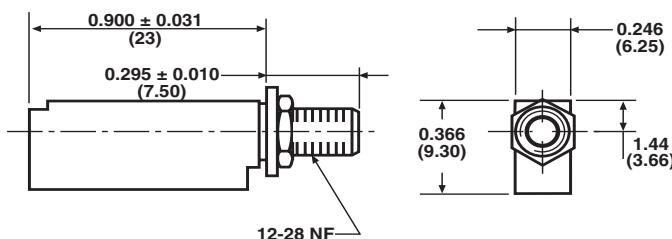

Vishay Spectrol's standard 3/4" and 1 - 1/4" rectangular trimming potentiometers, the Models 43 and 70, may be easily panel mounted through the use of Vishay Spectrol Model 6 panel mount adapters. The adapters are designed to convert these standard trimmer models into panel mount trimmers in a quick, convenient, and economical manner. Assembly with the trimmer is accomplished by snap-in, providing for minimal installation time.
