

## **Mounting Instructions**

## **PRINCIPLES OF OPERATION**

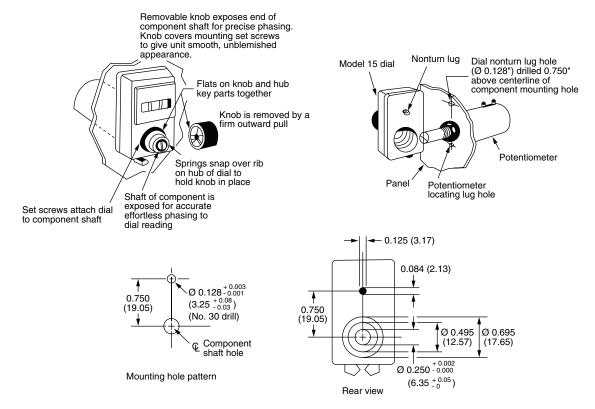

The left-hand numeral of the Model 15 Multidial<sup>®</sup> indicates the total number of revolutions of the drive sleeve (component shaft) that have been completed. The center numeral and right numeral indicate tenths and hundredths of a revolution, respectively. The graduations between the numerals on the right digit wheel can be read to one five-hundredth of a revolution of the drive sleeve.

Example: If the reading in the window displays 652, the reading is 6 turns plus 52 % of the seventh turn. Use of the graduations can further subdivide the reading at this setting.

## **MOUNTING INSTRUCTIONS**

The following instructions apply when the Model 15 Multidial is panel-mounted in conjunction with Spectrol 500 or 800 series potentiometers or other rotary components:

- 1. Provide a hole in the panel for the non-turn lug on the rear of the dial. The preferred dimensions are shown in the mounting hole pattern outline overleaf.
- 2. Mount the potentiometer or component to the panel.
- 3. Prepare the Model 15 Multidial for mounting by:
  - a. Rotating the dial to the desired reading.
  - b. Locking the brake.
  - c. Removing the spring-detented knob with a straight pull to expose the mounting set screws.
- 4. Place the dial over the component shaft and engage the non-turn lug into the hole provided in step 1.
- 5. Rotate the exposed component shaft to phase the component output to the preselected dial reading.
- 6. Tighten the set screws against the component shaft, replace the spring-detented knob, and release the brake.
- 7. The dial is now ready to operate.
