

## **Mounting Instructions**

- 1. Cut 28.1 mm dia hole in panel (2).
- 2. Fit anti-rotation washer (4) to potentiometer (6) using potentiometer nut (5) supplied, making sure that not more than 19 mm of the shaft length is protruding from the anti-rotation washer (4) figure 1.
- 3. Rotate potentiometer shaft fully anti-clockwise.
- 4. Place potentiometer through mounting nut (3) and panel (2).
- 5. Insert mechanism (1) through hole from the opposite side of panel and locate onto anti-rotation washer, lock in place with mounting nut (3) figure 2.
- 6. Rotate dial until reading is zero and fully tighten the hexagon headed screw onto the shaft using the key provided.
- 7. Check operation of dial, and re-adjust zero setting if necessary.
