4X150D
RADIAL-BEAM
POWER TETRODE

The Eimac 4X150D is the 26.5 volt version of the 4X150A. The 4X150D differs from the 4X150A only in the construction of its package-type heater which is integral with the cathode. The material in the 4X150A data sheet applies exactly to the 4X150D, except for its heater rating of 26.5 volts at 0.57 amperes.

Because of its package-type heater, wherein an insulating material encloses the heater and is bonded to the inner cathode surface, the Eimac 4X150D is suited for use in airborne or vehicular service having 28 volt electrical systems.

As with the 4X150A, the use of the Eimac 4X150A Air-System Socket, or a socket providing equivalent air-cooling facilities, is required for the 4X150D.
