Connections . . . . . See Dimensional Outline

Radiator . . . . . Integral part of tube  
Cooling:

In many applications, the .6264 does not require forced-air cooling. The radiator in combination with a connector having adequate heat conduction capability will generally provide adequate cooling under conditions of free circulation of air. The cooling must be sufficient to limit the plate-seal temperature to 175°C. When conditions do not provide adequate circulation of air, provision should be made to direct a blast of cooling air from a small blower through the radiator fins. The quantity of air should be sufficient to limit the plate-seal temperature to 175°C. See curves.

Incoming Air Temperature . . . . . 40 max. °C

Plate-Seal Temperature (Measured on  
Plate Seal) . . . . . 175 max. °C

Weight (Approx.) . . . . . 24 grams (0.85 oz)

Socket for Heater Leads . . Cinch No.54A16325, or equivalent

\* A flat plate shield 1-1/4" diameter located parallel to the plane of the grid flange and midway between the grid flange and the radiator plate terminal. The shield is tied to the cathode.
