

SPECIAL QUALITY DOUBLE DIODE

M8212

Special quality double diode with separate cathodes and internal screening between sections for use in equipment where mechanical vibrations and shocks are unavoidable and where statistically controlled major electrical characteristics are required.

This data should be read in conjunction with GENERAL NOTES—SPECIAL QUALITY VALVES which precede this section of the handbook, and the index numbers are used to indicate where reference should be made to specific note.

HEATER

Suitable for series or parallel operation, a.c. or d.c.

V_h^1	6.3	V
I_h	300	mA

CAPACITANCES² (measured with an external shield)

$C_{a'-k'+h+s+S}$	3.2	pF
$C_{a''-k''+h+s+S}$	3.2	pF
$C_{k'-a'+h+s+S}$	3.9	pF
$C_{k''-a''+h+s+S}$	3.9	pF
$C_{a'-a''}$	<26	mpF

LIMITING VALUES⁴ (absolute ratings) each section

P.I.V. max.	360	V
I_a max.	10	mA
$i_{a(pk)}$ max.	60	mA
$i_{a(surge)}$ max.	350	mA
V_{h-k} max.	360	V
Maximum acceleration (continuous operation)	2.5	g
Maximum shock (short duration)	500	g
T_{bulb} max.	165	°C

TEST CONDITIONS (unless otherwise specified)

V_h (V)	$V_{a(r.m.s.)}$ (V)	R_{load} (k Ω)	C (μ F)
6.3	165	11	8.0

GROUP F								
<i>Intermittent life test</i>								
The valve is connected in a full wave rectifier circuit with a load resistor of 11kΩ and a reservoir capacitor of 8μF. The supply impedance is adjusted so that the peak anode current is not less than 60mA for a nominal valve, the total output current being approximately 18mA.								
The cathode to heater voltage is provided by the output voltage in series with 117Vr.m.s.
