- Can Help Get to Market Easily, Quickly, and Cost Effectively

Phoenix Technologies PICO Group specializes in providing comprehensive system enabling software support for Hand-Held computers and Industrial Appliances. The OEM Adaptation Kit (OAK) is designed to meet the diverse requirements of this market by providing a combination of object and source code, an extensive documentation library, and powerful software development tools enabling OEMs to easily, quickly, and cost effectively adapt the proven Phoenix PC and PCMCIA compatible software for their specific platform.

The OAK enables easy porting by providing comprehensive documentation, a combination of object and source code, and easy to use software development tools.

A complete documentation library is designed to guide engineers through building PC-compatible system-level software easily. Since more and more OEMs are making the switch from proprietary technology, the documentation includes an introduction to PC architecture and provides guidance for those unfamiliar with it. Technology Design Guides (please include pointer, or arrow to Tech. Design Guides 'box') are included which provide explanations and examples of the most critical components of system software for Hand-Held and Industrial Appliances. From project start to finish, the OAK provides a comprehensive information resource needed to get the job done.

By providing easy to use build and development tools, the OAK offers all of the benefits of the proven Phoenix core system software products as well as special PICO extensions. These special extensions include: serial video, serial keyboard, ROM/RAM Disk, serial Flash update, variable screen size, variable setup screen size, PCMCIA support, smart battery support, non-volatile RAM disk, ROM DOS/ROM Windows, non-DMA floppy, and Pen extensions.

As well as easy to use customization and build tools, the OAK provides the OEM with development software such as BIOScope for ICE-like debugging and BIOSEDIT for binary modifications. The OAK offers a unique full-featured, reliable system software solution packaged in a way that is cost-effective and easy to use.
