Subject: Errata sheet for the DTS-2077/2075™ Test List Option Programming Guide for code version 1.95.

1. **`:TL:DAT GR 1 3`**

    This command has not been implemented and will result in a GPIB timeout. To read statistical data, use the `:TL:DAT TEST 3` command.

2. The **ARM-ON-*N*TH** counters must be initialized for each function (i.e., PER TPD) using the `:TL:TEST` command. The last two parameter settings in the command line are for setting the counters.

    Refer to the Test List Manual for a complete `:TL:TEST` command description.

    Example:

    ```
    :TL:TEST 1 TIM 7/FREQ/1///1000////1/256
    :TL:TEST 2 TIM 7/TPD++////100////1/1
    ```

    Defaults:
    Measure Frequency:
       Start counter is 1
       Stop counter is 256

    Measure Period:
       Start counter is 1
       Stop counter is 2

    All other Functions:
       Start counter is 1
       Stop counter is 1
