

Versacolor Thermal Transfer Color Plotter Supplies Catalog

Now that you've purchased a new Versatec Versacolor thermal transfer color plotter, Versatec wants to keep you fully supplied with a complete range of thermal transfer products. Versatec thermal transfer supplies have been selected to give you the highest quality output. For vivid, consistent output and plotter longevity, use Versatec supplies with all Versatec equipment.

The thermal transfer process uses an ink donor roll to produce a broad color range. The donor rolls are made from a wax-based ink and heat is used to transfer ink to the media. Color output requires a three-pass process, one pass for each color ink. Over 100,000 color combinations are possible.

Three types of ink donor rolls are available from Versatec—four-color, three-color and monochrome. Four-color donor rolls contain yellow, cyan, magenta and black ink. An A/A4-size four color roll produces 180 plots and a B/A3-size roll 125 plots. The three-

color donor rolls consist of yellow, cyan and magenta primaries. All three colors are combined to produce black. Plot up to 210 A-size or 150 B-size color plots, depending on the ink donor roll size, before you need to change donor rolls. Versatec offers two lengths of donor rolls, A/A4 and B/A3-sizes.

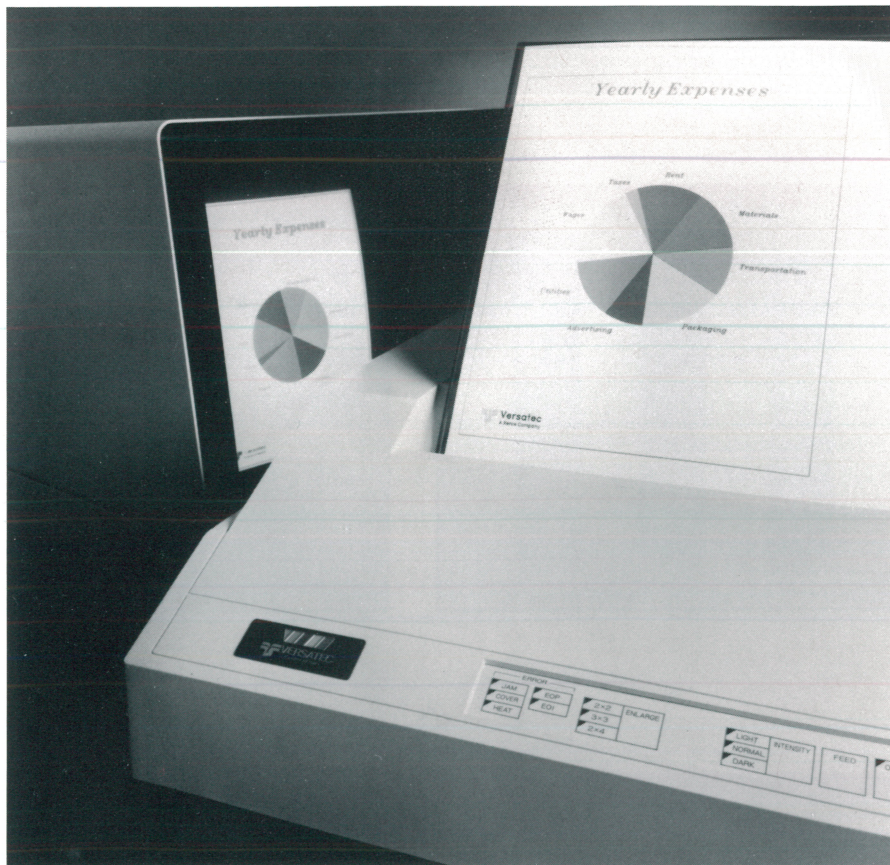

Monochrome (black) donor rolls produce up to 630 A-size or 450 B-size plots. A single-size monochrome ink donor roll fits all media sizes.

Changing donor rolls is fast and easy with Versacolor. A special cassette holds the donor roll and can be easily inserted into the machine. This handy feature is exclusive to Versacolor. Simply remove the cassette and replace the donor roll. There's no need to worry about tearing the donor roll while threading it inside the machine. Extra cassettes are available for users who want to quickly change from A/A4 or B/A3-size pages or color to monochrome.

Media choices include cut-sheet paper and transparency film. Four sizes are available: A-size (8½" x 11") and B-size (11" x 17") for U.S. machines; and A4-size (210mm x 297mm) and A3-size (297mm x 420mm) for international users. Paper is packaged 500 sheets to the ream, four reams to a carton. Film is available in 100 sheets per package, two packages per carton.

The paper has a smooth, bright white surface which gives colors a bold and brilliant appearance. Use paper for fast check plots and multiple copies. Transparency film is ideal for overheads or overlays. Output comes out dry and ready to use.

To keep your machine operating at peak performance, the writing head should be cleaned when each donor roll is replaced. Versatec recommends using our thermal head cleaner which is designed to remove excess ink from the writing head. Additional accessories for your Versacolor include a six foot power cord, paper stacker, ink donor roll cassette and media cassettes.

Versacolor offers the highest resolution and fastest speed over any other thermal transfer plotter in its price range.

Ordering information

Media (Cut sheet paper)	TT4908-CS Paper (8½" x 11") A-size 500 sheets per ream, 4 reams per carton
	TT4911-CS Paper (11" x 17") B-size 500 sheets per ream, 4 reams per carton
	TT49A4-CS Paper (210mm x 297mm) A-4 size 500 sheets per ream, 4 reams per carton
	TT49A3-CS Paper (297mm x 410mm) A3-size 500 sheets per ream, 4 reams per carton
Film (Cut sheet paper)	TT4908-CC Film (8½" x 11") A-size 100 sheets per ream, 2 reams per carton
