

The Cross Band Semi-Duplex Operation of the DJ-G1T

1. Select a Memory Channel which has a 440MHz frequency to receive.
2. Set the VFO mode.
3. Set a VHF simplex frequency to transmit.
4. Press and hold the "FUNC" key, then press the "LAMP/SPLIT" key.
The three down arrow icon will be displayed on the top of the LCD.
5. Press and hold the "FUNC" key, then press the "3/REV" key.
The memory frequency you select is displayed.
6. This completes the procedure.

When you press the "PTT" switch, the radio will transmit from the VHF side, and receives the UHF frequency when the "PTT" switch is released.
