

Comparison of MS2830A and NF Analyzer for Noise Figure Measurement

MS2830A
Signal Analyzer

Overview

This document describes the comparisons with Standard NF Analyzer about the noise figure measurement. The noise figure measurement option has 3 measurement modes, so this document compares each. Anritsu product is MS2830A (43 GHz model with Opt-017 and 068).

There is attenuator to the input port of equipment in the measurement, because we are considering the measurement uncertainty by impedance mismatching between the equipment. Therefore, it is the measurement situation using same attenuator and same DUT.

The following table shows the difference with NF Analyzer. These detailed data refer to the later pages.

Level Difference with NF Analyzer and MS2830A

	Measurement Item	Level Difference
Amplifier Mode	Noise Figure	≤ 0.11 dB
	Gain	≤ 0.23 dB
Down Converter Mode	Noise Figure	≤ 0.08 dB
	Gain	≤ 0.08 dB
Up Converter Mode	Noise Figure	≤ 0.13 dB
	Gain	≤ 0.09 dB
