

CombiTest

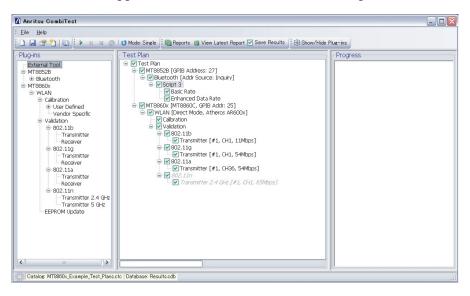

Multi-standard wireless test plan application

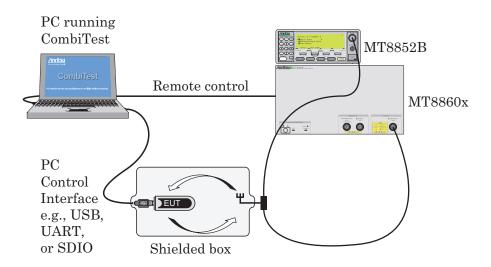

CombiTest is a software application used to remotely control Anritsu WLAN and *Bluetooth* test sets using a user-configured test plan of measurements. It is ideal for creating design-verification or production test plans for the new generation of wireless combo modules including 802.11 and *Bluetooth* radios. CombiTest allows users to install plug-ins as required for each test instrument.

CombiTest features:-

- Plug-ins for the Anritsu MT8860x WLAN Test Set and the Anritsu MT8852B Bluetooth Test Set
- WLAN Network and Direct modes supported
- Bluetooth test mode measurements
- · Rapid creation and execution of test plans
- Control packages available for leading WLAN chipsets
- Calibration, validation, and EEPROM programming of modules
- Run an entire test plan or just the selected components
- Detailed report of test results with database of previous tests
- CombiTest application source code available on request

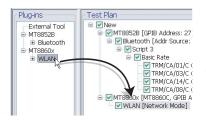

Setup

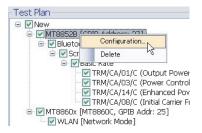

Five Simple Steps

CombiTest is simple to use. Just follow the five steps below to build a test plan and view the test results.

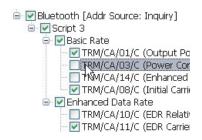

1. Build

Build a test plan in seconds by selecting the required components from the instrument plug-ins. Measurement and calibration tasks are selected in the [Plug-in] pane and transferred to the Test Plan by double-clicking or by drag-and-drop.

2. Configure

When all required components are in place, configure the remote connection, the wireless settings, and the measurements to be run. Each group of settings opens in a dialog box that is accessible from the associated branch of the test plan.

3. Select

Test plans can be executed in whole or in part by selecting the required components. Tasks that are not required can be removed by clearing the check mark () from the box. This is particularly useful when re-running or analyzing particular measurements.

4. Run

The test plan can be run once, in a continuous loop, or over a specified number of cycles.

5. View

When the test plan is complete, detailed measurement results are presented in a test report. Previous reports can be accessed from a database that can be filtered based on overall result and/or date of execution.
