## Calibration Receiver

100 kHz to 3 GHz

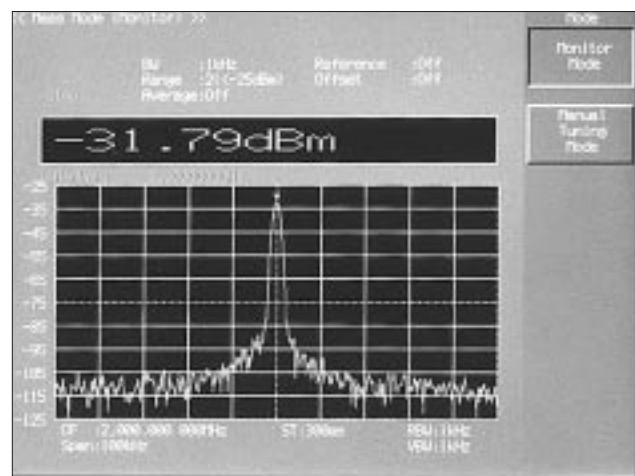

The ML2530A is a receiver for calibrating the output power level of such devices as signal generators and attenuators, covering the range of 100 kHz to 3 GHz. It is suitable for use as a reference level meter for the RF communications bands used by the world's mobile communications markets. High linearity is achieved by using a level detector that uses DSP technology. The level can be measured while observing the signal waveform to be measured by using the spectrum monitor function.

- **Supports 100 kHz to 3 GHz**
- **Wide dynamic range of -140 to +20 dBm and high linearity**
- **Provides measurement bandwidth of 1 Hz to 100 kHz, so that even signals with large residual FM can be measured using the 1 Hz bandwidth.**
- **Separate manual tuning and spectrum monitor modes**
  - Manual tuning mode: High-speed measurements are available.**
  - Measurement result is shown on the large display.**
  - Monitor mode: Measured waveform can be observed.**
  - This function can be used to view the characteristics of signal under test.**

Manual tuning mode

Monitor mode

- **Supports level units**
- **Easy to use**
- **Saves and recalls 100 measurement setups**
- **Saves and recalls 300 measurement results**
