1. Definitions

All specifications and characteristics apply under the following conditions:

- After 90 minutes of warm-up time, where the instruments is left in the ON state.
 - Over the 25 °C ± 5 °C temperature range, unless otherwise stated.
 - For error- corrected specifications, over 23 °C ± 3 °C, with < 1° C deviation from calibration temperature.
 - Specifications do not include effects of any user cables attached to the instrument.
 - Specifications may exclude discrete spurious responses.
 - All specifications apply with internal 10 MHz Reference Signal.
 - All specifications subject to change without notice. For the most current data sheet, please visit the Anritsu website: www.us.anritsu.com
 - All specifications below 300 kHz are typical.
 - Typical performance indicates the performance of an average unit. It does not include any guard-bands and is not covered by the product warranty.
- Typical specifications are shown in parenthesis, such as (-102 dB), or noted as Typical.**

ME7828A Broadband System Configuration:

The ME7828A broadband VNA system provides single sweep coverage from 10 MHz to 110 GHz for measuring active devices. Consists of the following items:

- MS4647A VectorStar VNA, 10 MHz to 70 GHz with options 001, 007, 051
- 3738A Broadband VNA test set
- 3738A-002 Option 002, ME7828A configuration
- MG37022A (2) Fast Switching Signal Generator, 2-20 GHz, with option 001
- 3742A-EW (2) MM Module, with Attenuator
- 66670-3 MUX coupler, Left with 70 kHz internal bias tee
- 66671-3 MUX coupler, Right with 70 kHz internal bias tee
- 806-206 V Male to V Female phase stable interconnect cable, 24" (2)
- 806-207 V Male to V Male phase stable interconnect cable, 24" (2)
- 3700C3 Floor Console
- ME7828A-SS020 On-site system assembly and verification

ME7828A Broadband System Options:

- MS4647A Option 070, 70 kHz start frequency
- MS4647A Option 002, Time Domain Measurements
- 70556 Replaces 806-206 and 806-207 24" cables with 806-208 and 806-209 36" cables
- 70555 Cable set for SUSS MicroTec SIGMA integration. Replaces 806-206 and 806-207 24" cables with 806-210 806-211 14" cables. Replaces RF and LO ruggidized semi-rigid cables with 806-121 (qty 2) 36" flex cables.

ME7828A- Option 012

Option 012 is a premium package offering enhanced performance of the ME7828A broadband VNA system with single sweep coverage from 70 kHz to 110 GHz.

Consisting of the following additional items:

- MS4647A VectorStar VNA, Option 070, 70 kHz start frequency
- MS4647A VectorStar VNA, Option 062, adds four attenuators in forward and reverse directions for maximum power level control, bias tees in the VNA test set, gain compression and efficiency measurement software.
- MS4640A Option 002 Time Domain Measurements

ME7828A MillimeterWave System Configuration

The ME7828 Millimeter Wave VNA provides waveguide band coverage up to 500 GHz.

Consists of the following items:

- Any MS4640A VNA
- 3738A Test Set - 3738A-002 Option 002, ME7828A configuration
- MG37022A (2) Fast Switching Signal Generator, 2-20 GHz, with Option 001 (2 each)
- Any 3740A-x or 3741A-x Millimeter Wave Modules (two are required)
- 3700C3 Floor Console

A separate document found on the Anritsu website (www.us.anritsu.com) provides specifications for the MS4640A-series 20, 40, 50 and 70 GHz VNAs.

2. Specifications for Broadband Configuration

ME7828A Broadband System configured for Active Device Measurements, 10 MHz to 110 GHz

Nominal power level control of 20 dB. Does not include source or receive attenuators for Port1 or Port2. Kelvin bias tees included in the MUX coupler/combiner for active device measurements. Connection to Triax output Source Measure Units (SMUs) available.

ME7828A, Option 012, Broadband System for Active Device Measurements, 70 kHz to 110 GHz

Option 012 is a premium package providing enhanced performance of the ME7828A. In addition to 70 kHz operation, additional performance includes source and receiver attenuators for Port1 and Port2 for extended power level control.

2.1 System and Receiver Dynamic Range, Noise Floor¹

System Dynamic Range is calculated as the difference between the maximum rated port power and the specified noise floor at ports 1 or 2.

Receiver Dynamic Range is calculated as the difference between the receiver compression level and the specified noise floor at ports 1 or 2.

Noise Floor is measured at 10 Hz IF Bandwidth with no averaging and ports terminated.

All noise floor values are RMS and measurements are made with a VNA port power setting of -10 dBm.

Normalizing measurement made with a through line connection, with its effects compensated for.

1. Using the 806-206 and 806-207 1.85mm 24" test port cables.

2.2 Test Port Power, Receiver Compression¹

Port power control is provided by the base VNA below 67 GHz, and by a manual 20 dB attenuator in the mmW module above 67 GHz, Typical.

Receiver compression point is defined as the port power level beyond which the response may be compressed more than 0.2 dB relative to normalization level. 10 Hz IF bandwidth used to remove trace noise effects.

100 to 110	30	30	30	.08	.10

Measurement Uncertainties

The graphs give measurement uncertainties after the above calibration. The errors are worst case contribution of residual directivity, load and source match, frequency response and isolation, network analyzer dynamic accuracy, and connector repeatability. 10 Hz IF Bandwidth is used. For transmission uncertainties, it is assumed that $s_{11} = s_{22} = 0$. For reflection uncertainties, it is assumed that $s_{21} = s_{12} = 0$. For other conditions, please use our free Exact Uncertainty calculator software, down-loadable from the Anritsu website at, www.us.anritsu.com.

2.8 Kelvin Bias Tees

Provides Sense and Force BNC connections per combiner, close to the W1 interface, to minimize the IR drops associated with the impedances between the bias tee and the DUT. (Max Voltage: 16 VDC, Max Current: 100 mA)

For applications requiring Source Measure Units (SMUs) with tri-axial outputs, a tri-axial (male) to BNC (male) cable is available, with the inner-shield isolated from ground at the bias tee BNC end, to float at the SMU's guard potential. (Check the accessories list for ordering information.)

3. Specifications for Waveguide Band Configurations

ME7828A-000 mmW VNA, Waveguide band

Can be configured for the V, E, Extended-E, W, and Extended-W waveguide bands. Two mmW modules are needed, one per port. Two 3740A-style Transmission/Reflection modules could be used for full 2-port measurements. For Forward direction only measurements, a 3740A-style module is still needed on port 1, but a 3741A-style Transmission Only module could be substituted on port 2.

Band*	Frequency Range*	Waveguide Flange	Transmission/Reflection Module	Transmission Only Module
V	50 to 75 GHz	WR-15	3740A-V	3741A-V
E	60 to 90 GHz	WR-12	3740A-E	3741A-E
Ext-E	56 to 94 GHz	WR-12	3740A-EE	3741A-E
W	75 to 110 GHz	WR-10	3740A-W	3741A-W
Ext-W	65 to 110 GHz	WR-10	3740A-EW	3741A-EW

* For different bands such as WR-5 (140 to 220 GHz), WR-3 (220 to 325 GHz), or higher, please call the factory for a quote. For more information on mmwave modules, please visit www.omninc.com.

3.1 Port Power, Noise Floor, Dynamic Range

System dynamic range is defined as the ratio of the source power to the noise floor.

Receiver dynamic range is defined as the ratio of max. receive power to the noise floor.

Noise Floor measurements are RMS, are made with no average in a 10 Hz IF bandwidth, and include an isolation calibration.

All figures are typical.

5. Standard Capabilities for All Configurations

For standard capabilities, please use the MS4640A-series VNA data sheet 11410-00432, available at www.us.anritsu.com.

ME7828A Option 012 includes MS4640A 70 kHz option, Time Domain option, Source and Receiver attenuator option, and internal test set bias tees.

6. Calibration and Correction Capabilities

Calibration Methods	Short-Open-Load-Through (SOLT) with Fixed or Sliding Load Offset-Short Triple-Offset-Short Short-Open-Load-Reciprocal (SOLR) Reciprocal or Unknown Through Method Line-Reflect-Line (LRL) / Line-Reflect-Match (LRM) Advanced-LRM (A-LRM™) for improved on-wafer calibrations AutoCal (V connector, $\leq 70\text{ GHz}$)
Correction Models	Full 12-term 1 path / 2 port Frequency Response (Transmission or Reflection, one or both directions) Reflection Only (1 port or 2 ports)
Merged Calibration	Merge multiple calibration methods over bands of frequency points.
Calibration Standards' Coefficients	Load coefficients from your Anritsu cal kit's USB Memory stick Enter manual coefficients into User-Defined locations.
Reference Impedance	Modify the reference impedance from 50 Ω to any impedance but 0 Ω .
Interpolation	Allows interpolation between calibration frequency points, if selected.
Adapter Removal Calibration	Characterizes and "removes" an adapter used during calibration that will not be used for subsequent device measurements, for accurate measurement of non-insertable devices.
Dispersion Compensation	Selectable as Coaxial, other non-dispersive (e.g., for coplanar waveguide), Waveguide, or Microstrip.
Flat Power Calibrations and Linear Power Calibrations (Power Meter Correction)	Different power meter calibrations are available to enhance power accuracy at the desired reference plane (to usually $\sim 0.1\text{ dB}$ for short periods of time). Flat power calibration up to 70 GHz using the appropriate W1 adapter is available. Power level is user-selectable when within the power adjustment range of the internal source. Other power levels are then arrived at by offset transfers. A linear power calibration is performed over a range of power levels for use in power sweep mode and is performed at a specified frequency or frequency range. Both calibrations are performed using an external power meter over the dedicated GPIB port or other suitable control ports.
Embedding/De-embedding	The MS4640A is equipped with an Embedding/De-embedding system. De-embedding is generally used for removal of test fixture contributions, modeled networks and other networks described by S-parameters (s2p files) from measurements. Similarly, the Embedding function can be used to simulate matching circuits for optimizing amplifier designs or simply adding effects of a known structure to a measurement. Multiple networks can be embedded/de-embedded and changing the port and network orientations is handled easily. An extraction utility is part of this package that allows the easier computation of de-embedding files based on some additional calibration steps and measurements.
Impedance Conversion	Allows entry of different impedances (complex values) for different ports.
Data Points	2 to 25,001 points, or 100,000 points in single channel

7. Mechanical Calibration/Verification Kits

W1 (1 mm) Calibration/Verification Kit, 3656B

Provides 12-term SOLT or Triple Offset Short calibrations, for W1 (1 mm) devices, and two verification standards.

Adapter, W1 (male) to W1 (female)		1	33WWF50
Adapter, W1 (male) to W1 (male)		1	33WW50
Adapter, W1 (female) to W1 (female)		1	33WFWF50
Stepped Impedance ThruLine, W1 (male - female)	Verification Device	1	18WWF50-1B
50 Ω matched ThruLine, W1 (male - female)	Verification Device	1	18WWF50-1
Torque Wrench	6 mm, 5.4 N-cm (4 in-lbs)	1	01-504
Open-ended Wrench	6 mm / 7 mm	1	01-505
Coefficients for standards	On memory stick	1	-

* SC Connectors are a solution for accurate calibrations for non-insertable 1 mm devices. One can change the sex of the SC connector using the provided tool, pin, sliders, and locking keys to ensure the best pin-depth, thus valid calibrations after changing the sex of the adapter.

3655-series Waveguide Calibration Kits

The 3655-series calibration kit contains two Flush Shorts, two offsets, a 1/8 wavelength and a 3/8 wavelength, two Fixed Terminations, and two precision waveguide sections for a full 12-term Offset Short Calibration. The -1 cal kit adds a Sliding Load.

8. Test Port Cables

Test Port Cables, Flexible, High Performance

Description	Frequency Range	Impedance	Length (cm)	Insertion Loss (dB)	Return Loss (dB)	Part Number

			13	2.23 (1.74)	≥ 14	3671W1-50-2
			16	2.74 (2.14)	≥ 14	3671W1-50-3

9. Precision Adapters, Attenuators, and more

Anritsu offers a complete line of precision adapters and attenuators. For more information, please visit our website at www.us.anritsu.com.

10. Warranty

The ME7828A series of VNAs and related accessories offer a 1 year warranty from the date of shipment. Please contact your local service center for additional warranty coverage. Note that the key component of the system, the MS4640A VNA, is covered by a 3-year standard warranty.
