ME7750A

43.5Gbit/s BERT System
25Gbit/s to 43.5Gbit/s

Measurement solution for 40Gbit/s system and modules.

Main Features

■ High Quality Waveform

The re-timing circuit using D-type Flip-Flop realizes high quality waveform (low jitter and low wave distortion) and high output amplitude (2Vp-p).

MP1801A Output Waveform Sample
(40Gbit/s Data Output)

■ High Sensitivity

It is possible to analyze minimum 100mVp-p data input signal. This sensitivity expands measurement abilities.

■ Measurement with Pure PRBS

The MP1758A Pulse Pattern Generator can generate PRBS on 43.5 Gbit/s (selectable pattern length = $2^n - 1$: $n = 7, 9, 11, 15, 20, 23, 31$). The phase of each channel is shifted 1/4 cycle and multiplexed signal can be treated as pure PRBS.

■ Wide operation frequency

It has capability to treat FEC signals on the 40Gbit/s. 4 channels pulse pattern generator (MP1758A) and the 4 channels error detector (MP1776A) can support 100Mbit/s to 12.5Gbit/s signals. The multiplexer (MP1801A) and the de-multiplexer (MP1802A) can support 25Gbit/s to 43.5Gbit/s signals.

■ High flexibility

The MP1758A Pulse Pattern Generator and the MP1776A Error Detector can be used as the single measurement equipment. It will bring you the high flexibility on the various combinations and scenes.

43.5Gbit/s BERT System

MP1801A 43.5G MUX

The MP1801A 43.5G MUX can multiplex maximum 4 data signal inputs (each transmission speed is maximum 10.875Gbit/s) and generate 43.5Gbit/s multiplexed signal. It can also generate 1/4 clock signal.

MP1802A 43.5G DEMUX

The MP1802A 43.5G DEMUX can de-multiplex the 43.5Gbit/s data input into 4 signals. Its 4 output signal lines are brought to the 4 channels error detector (MP1776A) and it enables to evaluate 43.5Gbit/s high-speed data signal.

43.5Gbit/s BERT System

MP1758A Pulse Pattern Generator

The MP1758A Pulse Pattern Generator has 4 channels data output lines and each channel has capability to generate maximum 12.5Gbit/s signal. It is available to create PRBS (maximum pattern length is 2^n-1 , $n=7, 9, 11, 15, 20, 23, 31$) and programmable pattern (user defined pattern). Combining with the MP1801A 43.5G MUX makes it possible to generate 43.5Gbit/s PRBS or programmable pattern.

MP1776A Error Detector

The MP1776A Error Detector has 4 channels error detector units and each channel has capability to measure bit error rate on maximum 12.5Gbit/s signal. Each channel can be configured and operates independently, but it will operate most effectively under the 4Ch Combined Mode. This mode makes relationship between each channel, and considers 4 channels as the single 43.5Gbit/s data input.

68C/69B Family Synthesized Signal Generator

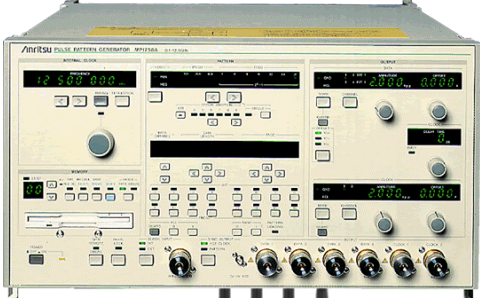

Anritsu 68C or 69B family signal generator is necessary for the 43.5G BERT System. Its waveform contains less jitter and wave distortion on the very high frequency. This equipment acts as the clock source in the 43.5G BERT System and its waveform quality influences every signal through the system. 68C/69B series will satisfy the needs for evaluation with high quality and accuracy.
